PARISH of SAINT PANCRAS, in the County of MIDDLESEX.—DEPARTMENT of WORKS.—CONTRACT for REMOVING DUST.—To DUSTMEN, SCAVENGERS, &c.—The Highways, Sewers, and Public Works Committee of the Vestry of the Parish of Saint Pancras, in the county of Middlesex, will meet at the Office of the Board of Works, No. 10, Edward-street, Hampstead road, on FRIDAY, the 18th day of APRIL instant, at HALF-PAST THREE o'clock in the Afternoon, to receive TENDERS from persons willing to CONTRACT for the REMOVAL of the COAL-ASHES, DUST, &c from the Houses and Yards of the several Streets, Squares, Courts, and other places within certain portions of the said parish of St. Pancras, from the 24th day of APRIL ins ant. up to, and inclusive of, the 30th day of SEPTEMBER, 1856, pursuant to the terms of draf contracts to be seen daily, between the hours of TEN in the forenoon and FOUR p.m. at the Office of the Chief Surveyor, 10, Edward-street, Hampstead-road. Sealed Tenders to be sent in, signed by the proposed Contractor, with the names and description of two sufficient sureties for the performance of his Contract, to my office by or before TWELVE o'clock at noon, on the said FRIDAY, the 18th day of APRIL. The Vestry do not bind themselves to accept any Tender. No Tender will be received or accepted unless made out on one of the printed forms.—Further particulars, with the form of Tender can be obtained at the Office of the Chief Surveyor, 10, Edward street, Hampstead road, where also plans and descriptions of the several portions of the parish can be inspected.—By order,

G. W. F COOK, Vestry Clerk.

Vestry Offices, King's-road, Pancras-road, April 3, 1856.

MARGATE CEMETERY, SAINT JOHN THE BAPTIST.—To BUILDERS and CONTRACTORS. Persons desirous of CONTRACTING for the ERECTION of TWO CHAPELS, LODGE, and BOUNDARY-WALLS, and for FORMING ROADS and PLANTATIONS in the New Burial-ground of the Parish of St. John the Baptist, Margate, are hereby informed that the PLANS and SPECIFICATIONS may be seen at the Town Hall, Margate, until the 8th day of APRIL instant, and until the 28th day of the same month, 1856. The Tenders are to be delivered, sealed and directed, to the Burial Board at the Town Hall, where they will be opened at TWELVE o'clock at noon on that day. The Board do not pledge themselves to accept the lowest or any Tender.—S. W. TRACY, Architect, Ipswich.

JOHN POUNSETT, Clerk to the Board.

Margate, April 1, 1856.

TO BUILDERS

THE COMMITTEE for the ENLARGEMENT of CHRIST CHURCH, PORTSWOOD, are prepared to receive TENDERS for the above-mentioned object. Plans and specifications to be seen at the Offices of Messrs. ELLIOTT and MASON, Architects, 64, Moorland-place, Southampton. Tenders to be sent in, sealed, and directed to Rev. G. S. FITZGERALD, Hamble, Southampton, by TEN o'clock on MONDAY, APRIL 28th, when they will be opened by the Committee. The Committee do not pledge themselves to take the lowest Tender.

April 9th, 1856.

TO BUILDERS

THE UNION BANK of LONDON hereby give Notice, that sealed TENDERS will be received for BUILDING a BRANCH BANK in Fleet-street, the drawings and specification of which may be seen at Mr. AITCHISON'S Offices, Munsey-court, Trinity-square, City, on and after 9th APRIL next. The Tenders to be in one sum for the whole of the works. The quantities will be supplied on the payment of £1 each, and the builder who obtains the contract is to pay the difference of cost to the surveyors. The Tenders to be addressed to the Secretary, Union Bank of London, Fleet-street, and sent in before 30th APRIL next, and endorsed on the outside, "Tender for Branch Bank, Fleet-street." The Directors do not bind themselves to accept the lowest or any of the Tenders.

EAST LANCASHIRE RAILWAY.—The Directors are prepared to receive TENDERS for the MAINTENANCE of the PERMANENT WAY and WORKS, also for the formation and laying down a Second Line of Rails from Stubbins Junction to Rawtenstall, including all the works connected therewith. Specifications and Plans may be seen on and after the 26th instant, at the Company's Station, Bury Station. —Sealed Tenders, endorsed "Tender for Maintenance of Permanent Way and Works," to be addressed to the undersigned, before the 19th day of APRIL next.—By order,

MYLES FENTON, Secretary.

Bury, Lancashire, March 19th, 1856.

TO STEAM-ENGINE MAKERS.

THE TOWN COUNCIL of the BOROUGH of BRIDGNORTH (as Local Board of Health) are prepared to receive TENDERS from persons willing to make and erect an additional CONDENSING STEAM-ENGINE, PUMPS, &c. at their Water-Works, in the Lower Town, Bridgnorth.—Specifications and conditions of Contract, may be obtained by payment of 5s. Drawings and plans inspected, and further particulars had, by application at the Office of J. PILBROW, C.E. Tottenham Engineer to the Board). Sealed Tenders, endorsed "Tenders for Steam-Engine," and addressed to the Local Board of Health, Bridgnorth, Salop, must be sent on or before THURSDAY, the 1st day of MAY next.

Bridgnorth, April 5, 1856 By order of the Board.

THE CONSERVATIVE LAND SOCIETY.

TRUSTEES.

Lord Viscount Kaneleigh.
The Hon. Col Lowther, M.P.
Sir Archibald Edmonstone, Bart. C. B. Hamilton, M.P.
J. C. Cobbold, esq. M.P.

TO ARCHITECTS, BUILDERS, AND THE TRADE.

PATENT PLUMBIC ZINC. GREAT REDUCTION IN PRICE.

PLUMBIC ZINC is a perfect combination of Lead and Zinc, and not requiring to be more than one-fourth or one-fifth as thick as Sheet Lead, is consequently much cheaper than that material, and at the reduced price costs but little more than Sheet Zinc.

No. 11 gauge weighs about	18 oz.	per foot super.	
12	"	20	"
13	"	23	"
14	"	26	"

Full particulars and the reduced price sent by post on application to
A. MOREWOOD and CO. DOWGATE-DOCK, LONDON, to whom all letters must be addressed.

SKAIFE'S GALVANIZING WORKS, Commercial-road, Limehouse, London.
Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where iron not liable to rust is required.
Patent Galvanized Iron supplied in every form.
Sheets plain and corrugated.—Roofs fixed complete.
J. Skaife is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zinc, and Tiles.
An Allowance to the Trade.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINE can be obtained of all ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.
Established 1774.

FENDERS, STOVES, and FIRE-IRONS.—Buyers of the above are requested, before finally deciding to visit WILLIAM S. BURTON'S SHOW-ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, FIRE-IRONS, and GENERAL IRONMONGERY as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments and two sets of bars, 2l. 14s. to 6l. 10s.; ditto, with ormolu ornaments and two sets of bars, 5l. 10s. to 12l. 12s.; bronzed fenders complete, with standards, from 7s. to 3l.; steel fenders, from 2l. 12s. to 6l.; ditto, with rich ormolu ornaments, from 3l. 12s. to 7l. 7s.; fire irons, from 1s. 9d. the set to 2l. 4s. Sylvester and all other patent stoves, with radiating hearth plates. All which he is enabled to sell at these very reduced charges.

Firstly—From the frequency and extent of his purchases; and Secondly—From those purchases being made exclusively for cash.

The alterations and additions to these extensive premises already by far the largest in Europe), which occupied the whole of last year, are of such a character that the entire of EIGHT HOUSES is devoted to the display of the most magnificent stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver, Plated Goods, Baths, Brushes and Turnery, Lamps and Gasaliers, Iron and Brass Bedsteads and Bedding), so arranged in Sixteen Large Show-rooms, as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere.

Illustrated catalogues sent per post free.

39, OXFORD-STREET; 1, 1a, 2, and 3, NEWMAN-STREET; 4, 5, and 6, PERRY'S PLACE.—Established 1820.

RANGES.—THE PATENT WORCESTERSHIRE RANGE, Manufactured exclusively by JONES, ROWE, and PERRINS, Worcester. Also to be obtained through the agency of any respectable ironmonger.

"A more economical arrangement for fuel, in the accomplishment of a great deal by small means, or a more compact contrivance for cooking at once all the courses necessary for a dinner, was probably never seen."—*Worcester Herald*, March 15, 1856.

Illustrations of Ranges forwarded upon application.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES

Beyond the current Price of Hoop-iron.

Gauge.	In wide.	Per 1,000 ft.
No 16 ..	1½ ..	7s. 0d.
15 ..	1¾ ..	7s. 6d.
14 ..	2½ ..	8s. 0d.
13 ..	3 ..	8s. 6d.
12 ..	3½ ..	9s. 6d.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it a intervals of 1½ inches on both side alternately, and turning one side of each notch in succession the contrary directions to the reverse sides of the iron, thus forming reversed claws, which are so bent that a direct end grain of the iron is presented longitudinally, offering most powerful and effectual resistance, and which become when built into the brickwork, embedded in the structure, preventing the possibility of longitudinal escape, and a complete and permanent bonding together of the whole building is thereby obtained.

Patentee—FREDERICK TYERMAN, Architect, 44, Weymouth-street.

Sole Manufacturers—THOMAS PERRY and SONS, Government Contractors, Bilston.

London Depôt—463, EARL-STREET, BLACKFRIARS.

FIRE-PROOF CONSTRUCTION.—

FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desiderata of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr BARRETT, 13, York-buildings, Adelphi.

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.

RAIN PIPES, &c. — F. A. TIDDEMAN

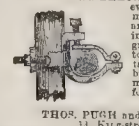
and CO. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

KIMBERLEY'S NEW PATENT FLOOR-



ING CRAMP continues to receive the patronage one and all, of every leading Builder Engineer, and Architect, not only in England, but through out the world. Its simplicity, power, and economy still remain unquestionable, even by the side of its most important rivals, and the speedy, general manner in the sale, is the best proof of it. It is useful in many ways as a cramp, and unlimited evidence can be given that it is a most valuable tool, which no Builder should be without.

London Agents—Messrs. THOMAS PUGH & CO Wholesale Ironmongers, 13 King-street, Snow-hill, London.

KIMBERLEY'S NEW PATENT SCAF-

FOLDING BRACKET entirely supersedes the old and ever-troublesome cords. They are made of every kind as Wrought Iron are light, very cheap, and it is next to impossible to wear them out. They are greatly admired, and require time only to supplant entirely the usually uncertain cords. Bodies, with all particulars, by post. The whole Building Trade admit this is an article they have required for the last century.

THOS. PUGH and CO. Wholesale Ironmongers, 14, King-street, Snow-hill, London

See also KIMBERLEY'S Patent Door Springs, Skylight Screws, Casement Fasteners, Stock Locks, Bench Stops, &c. &c.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY,

PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK.

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS

LIGHTNING CONDUCTORS.—

R. S NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.

Illustrated Price-catalogues post-free on application.

SAWING MACHINERY for SALE.—A TIMBER FRAME, to cut bulk, 2 feet 6 inches square; also a DEAL SAWING FRAME, to cut wide plank, 28 inches.—May be seen at College Wharf saw mills, Belvedere-road, Lambeth.

WIRE (SUSPENSION) TRAMWAY.—To CONTRACTORS, OWNERS of QUARRIES, MINES, &c.—The patentees of the Wire Tramway for Propelling Cars or Waggons by their Own Weight, beg to call attention to the great saving of labour, &c. this invention secures in the construction of earthworks, cuttings, embankments, quarries, mines, or any other works where weights are required to be transported from one point to another, and where, from the nature of the locality, and consequent expense, a permanent tramway is impracticable. The patentees are willing to grant licenses for the working of the above invention, and the use of all drawings, plans, &c. necessary for the erection of the apparatus would be furnished free of charge. Terms and further particulars may be had on application to Mr. J. C. SANDLAND, No 39, Cornhill, London.—500 yards of this tramway have been erected in her Majesty's Arsenal at Woolwich, and approved of by the committee of selection.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 10s.—35 and 36, High Holborn.

TO BE SOLD, a Great Bargain, a Circular Ornamental IRON STAIRCASE, complete, rising 11 feet from room to room.—Can be seen between the hours of ten and four, at No. 7, Salisbury-street, Strand.

CHUBB'S LOCKS, with all the recent improvements; STRONG FIRE-PROOF SAFES, CASH and DEED BOXES.—Complete lists of sizes and prices may be had on application.
CHUBB and SON, 57, St. Paul's-churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

TO BANKERS and OTHERS.—TO BE DISPOSED OF, FOUR perfectly new GALVANIZED WROUGHT-IRON SAFES, 3 feet high, 3 feet wide, and 1 foot 6 inches deep, with folding doors fitted with Chubb's patent locks. The interior is divided into eighteen compartments, adapted for the reception of deeds, securities, or other papers. These safes are part of a number made for a Banking Company for the above purpose, and are found to be more than they require. They will therefore be disposed of at a low rate. They are well adapted as a secure depository for plate.—Apply to Mr. B. PITT, 3, Windsor-terrace, Vauxhall-road, Pimlico.

SELLING OFF!—STOCK of RAIN-PIPES, Gutters, Air Bricks, Sash Weights, Stable Fittings, and all kinds of Builders' castings, under cost price, at WALMSLEY and CO.'S, Paul's Wharf, Upper Thames-street.—Two Carts, Harness, Chaff-machine, &c. cheap.

A TA MEETING of STONE-MERCHANTS, held at the Dusty Miller Inn, Hipperholme near Halifax, Yorkshire, on Easter Tuesday, March 25th, 1856, it was unanimously agreed that an ADVANCE on TOOLED FLAGS should take place on the 1st of APRIL, 1856.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SOULES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of every large dimensions and of superior quality They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

PARIS EXHIBITION. — ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of loo-tables, chiffoniers, consoles, &c.; baths, baptistries, altar-tablets, pilasters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

Contractors supplied to any extent.

TO ROAD TRUST SURVEYORS AND ROAD CONTRACTORS.
FOR SALE, about 1,000 cubic yards broken BOMBAY and PORT PHILLIP BLUE GRANITE, two-thirds of which is best Bombay and one-third sound Port Phillip.—Apply to Mr. CHARLES ROSS, 2, Stepney-causeway, Ratcliff.

CROGGON and COMPANY, Manufacturers of PATENT ASPHALTE ROOFING, BOILER, RAILWAY, SHEATHING and INDOROUS FELT.
For Damp Walls, and Lining Iron Houses,
2, DOWGATE-HILL LONDON.

VENTILATION.—PURE AIR.
Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.
With single pulley, from 6s. each; with leading pulley, from 8s. 6d.
These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

TUDDENHAM, IPSWICH, BRICK AND TILE WORKS.

EXPOSITION UNIVERSELLE
de 1855.

Medaille de 2me Classe awarded to James Luff, for Specimens of Ornamental Bricks and Tiles.

JAMES LUFF

Begs to inform Architects and Builders that he MANUFACTURES all KINDS of ORNAMENTAL BRICKS and TILES, Red and White, for Chimney Shafts, Ridge Crests, Cornices, and Mouldings.

Also, all KINDS of ORNAMENTAL VASES, CHIMNEY-POTS, MALT-KILN TILES, DRAINING-PIPES, and TILES of every description.

N.B. Builders furnishing detailed drawings can have all sorts of Ornamental Designs executed.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that **FOUR-FIFTHS** of the **ROUGH PLATE**, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

January 1, 1855. *** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

BLACKIE and SON, Warwick-square, City, London; and Glasgow and Edinburgh.

TO ENGINEERS, CONTRACTORS, ARCHITECTS, AND SURVEYORS.

ALEXANDER'S TABLES, intended to facilitate the setting out of curves of railways, roads, &c. for centres, for arching, &c. and contain the Rise from chords and tangents of curves, from 10 feet radius up to 4 chains radius, with the angles formed by tangents of various lengths, being an expeditious and certain method of ranging curves. Price 5s. post free. To be had only of the Author, J. LYON ALEXANDER, Engineering Surveyor, &c. 7, Castle-street, Holborn, London.

COMPLETION OF THE TRAVELLER'S LIBRARY.

In 16mo. price 2s. 6d. cloth; or in 2 Parts, price 1s. each,

MR. MACAULAY'S ESSAY on CROKER'S EDITION of BOSWELL'S LIFE of JOHNSON: with Mrs. PIOZZI'S ANECDOTES of Dr. Johnson.

Forming Vol. XLVIII. or Parts 93 and 99 of the "Traveller's Library."

The "Traveller's Library" will be completed in Three more parts, as follow:—

On May 1, Part 100, AULDJO'S ASCENT of MONT BLANC

On June 1, Parts 101 and 102, the WIT and WISDOM of THOMAS FULLER

London: LONGMAN, BROWN, GREEN, and LONGMANS.

GEOLOGICAL SURVEY OF GREAT BRITAIN.

Now ready.

MAPS, comprising the Warwickshire and Leicestershire Coal-fields and the surrounding country; consisting of the following quarter-sheets coloured: viz—

51 NW. Coventry, price 2s.

54 NE. price 3s.: Henley in Arden.

62 NE. and SE. price 2s. each: Tamworth and Birmingham.

63 NW. and SW. price 3s. each: Ashby-de-la-Zouch, Atherstone, and Nuneaton.

63 NE. price 3s.: Leicester.

71 SW. price 3s. and SE. price 2s.: Derby and Loughborough.

Maps 63 NE. and SE., 63 NW. and SW., 71 SW. accurate; show the boundaries of the Leicestershire and Warwickshire Coal fields, the outcrops of the principal beds of coal, the faults, and the relations of the surrounding, overlying, and underlying strata to the coal-measures.

The Maps of the South Staffordshire Coal-field 62 NW. and SW. and 54 NW. and of the Derbyshire Coal field 71 NW. and 82 NW. and SW. can also be obtained.

For list of prices of these and other Maps and Sections, and Memoirs of the Geological Survey of Great Britain, apply at the Geological survey Office, Jermyn-street, London; or to Messrs Longman and C. Paternoster-row.

A New Edition of the Colours and Signs employed in the Geological Survey may be had, price 5s. Also, the Horizontal Sections, price 8s. per sheet, coloured: and the Vertical Sections of Coal Measures, &c. price 4s. 6d. each.

London: Published for HER MAJESTY'S STATIONERY OFFICE by Messrs. LONGMAN, BROWN, GREEN, and LONGMANS.

Neatly bound, price 4s.

A HANDBOOK of ARCHITECTURE for the UNLEARNED; in a Series of Letters to a Lady, embodying a Popular Sketch of the History of Architecture, and the Characteristics of the various Styles which have prevailed.

By GEORGE GODWIN, F.R.S. &c.

With Illustrations.

By the same Author, price 1s.

LONDON SHADOWS; or, a Glance at the Homes of the Thousands. With Illustrations.

Office of "The Builder," 1, York-street, Covent Garden; and from any Bookseller.

1 Vol. Handsomely Bound, 21s.

BUILDINGS and MONUMENTS, Modern and Mediæval; being Illustrations of the Edifices of the Nineteenth Century, and of some of the Architectural Works of the Middle Ages.

By GEORGE GODWIN, F.R.S.

Fellow of the Royal Institute of Architects, &c. Editor of "The Builder," and Corresponding Member of several Societies.

With numerous Engravings.

Published at the Office of "The Builder," 1, York-street, Covent-garden.

Third Edition.

THE BUILDER'S FRIEND,

Price One Shilling.

Office of "The Builder," and of all Booksellers.

Now ready bound in cloth, with printed book of prices, price 21 3s.

BOOK of NEW, ORIGINAL, and SELECT DESIGNS of CABINET FURNITURE, necessary for the Combination of Architecture.

By an Eminent ARTIST

Published for the use of the trade, by A and R WILCOXON, Wholesale Cabinet-makers, Upholsterers, Chimney Glass Manufacturers, and Paper Stainers Monument-yard, London.

THE FREEMASONS' MAGAZINE and MASONIC MIRROR for APRIL, 1856, is now ready. Price 1s.

London: HENRY GEO. WARREN, 2, Red-lion-court, Fleet-street; and GEORGE ROUTLEDGE and CO. Farringdon-street.

SIR ARCHIBALD ALISON'S HISTORY of EUROPE, from the Commencement of the French Revolution in 17.9, to the Battle of Waterloo.

LIBRARY EDITION, in 14 vols. demy 8vo. with Portraits £10 10 0

Crown 8vo. 20 volumes 6 0 0

PEOPLE'S EDITION, 12 vols. closely printed in double columns, 24 8s. and Index Volume 3s.

"The personal Alison's Works, indeed, is an edinction of itself; and it is one so intimately connected with present times, with the hopes and events now influencing the world, that with it all others would be imperfect. To the young statesman, the politician, the student, and to the great mass whom instruct and interest alike lead to a contemplation of the age in which they live, we could wish nothing better than Alison's History as the most indispensable of books."—*Blackwood's Magazine.*

WILLIAM BLACKWOOD and SONS, Edinburgh and London

Sold by all Booksellers.

This day is Published, imperial 8vo. with 24 Engravings, Price 18s. 6d.

THE SCIENCE of BEAUTY, as developed in Nature and applied in Art.

By D. R. HAY, F.R.S.D.

WM. BLACKWOOD and SONS, Edinburgh and London.

THE QUARTERLY REVIEW, No. CXCVI. will be Published NEXT WEEK.

CONTENTS:

I. BRITISH FAMILY HISTORIES.
II. THE HALDANES.

JOHN MURRAY, Albemarle Street.

LA FRANCE FIRE INSURANCE COMPANY

Established, 1837. 6, Rue Ménard, Paris.

Capital, 10,000,000 f. 1,000,000 £

Amount of property insured in 1854, 114,881,500l. sterling.

Premiums received, 114,987l. sterling.

This Company grants policies on most advantageous terms. Common rates at 3s. per cent. per annum, without further charge, instead of 4s. 6d. usual cost of the same insurance with British offices.

Proposals to be transmitted through the Company's Correspondent in London, at his Offices, 45 New Bridge-street, Blackfriars. N.B. One year's premium allowed on seven years' insurances.

NORWICH UNION LIFE INSURANCE SOCIETY.

PRESIDENT.—Lieut. Gen. Sir R. J. HARVEY, C.B.

SECRETARY.—Sir SAMUEL BIGNOLD, M.P.

This Society in forty-seven years has issued 20,344 Life Policies, and its claims upon Nov. 5, 1855, had assumed 1,304 and in Sorrow. The accumulations now amount to nearly 2,200,000l. Its premiums are lower than those of most companies, and all the profits are divided among the assured.

For prospectuses, apply to Surrey-street, Norwich; and 6, Crescent, New Bridge-street, Blackfriars, London.

THE MINERS' ELECTRO-CHEMICAL REDUCTION COMPANY,

For the Reduction and Separation of Metals from their Ores.

By her Majesty's Royal Letters Patent.

On the "Coal-book System."

Capital, 30,000l. in 10,000 shares of 3l. each.—Deposit, 1l. per share.

COMMITTEE OF MANAGEMENT.

JOSEPH CARRINGTON, Esq. Bedford, Chairman.

Sir William Robert Sydney, the Bourne, Maidenhead.

James Cook, esq. Bow-churchyard

Gerrard de Wilton, esq. Stifford Lodge, Essex.

William Fell, esq. Pancras-lane, Bucklersbury.

Weston Parry, esq. New London-street.

J. W. Perkins, esq. Poplar-house, Poplar, Patentee and Chemical Manager

SOLICITOR—Thomas Lee, esq. 26, Moorgate-street.

BANKERS—The Bank of London, Threadneedle-street.

MANAGER—John Hamilton Clement, esq. Gladestet-terrace, Kensington.

Temporary Offices, 4, Union-court, Old Broad-street, London.

This Company proposes to work Wagstaffe and Perkins' Patent for extracting and separating the various metals from ores by chemical agency.

The Company's process gives the metals separately at a small cost; while the sulphur, arsenic, and other valuable properties are preserved for commercial purposes.

With a small outlay of capital, for the erection of model works, say 5,000l. for illustration and reducing English and foreign ores at a royalty per ton, a large income will be produced. For example, offers, after testing the process, have been made from foreign mines to convey 1,000 tons of copper ore annually, and to pay 8l. per ton for reduction, which, after deducting say 1 on. for expenses, would leave 4,000l. profit to the Company, increasing the value of the metal; also giving the other properties to the consumer and about 1,000 tons of extra sulphuric acid. Thus giving the Shareholders 40 per cent. on their capital, independent of the main and vast source of profit, without outlay, by granting licences to mining companies, for reducing ores at their mines.

A portion of the capital is already subscribed for, and application for Shares must be accompanied with the bankers' receipt for the deposit of 10s. per share, and may be addressed to the Solicitor or Manager, from whom detailed prospectuses may be obtained.

METROPOLITAN LOAN COMPANY,

Established 1839.

1, CRAVEN STREET, STRAND, LONDON.

Loans are advanced on sums varying from 5l. to 50l. repayable weekly or otherwise, as may be agreed upon, at a discount of 2l. per cent. for 10 fifty weeks, and for 25 weeks at 5 per cent. Forms may be had, price 2d., if by post, three postage stamps to be enclosed.

ROBERT NORTON, Secretary.

MORTGAGE.—To be LENT, at 5 per cent. several SUMS on MORTGAGE of first-class LEASEHOLD, held at low ground-rents. Also, 12,000l. in one or more amounts, on mortgage of freehold land or freehold ground rents, secured on first-class property. Interest, 4 per cent.—Apply to Mr. CLARKE, 158, Strand, corner of Arundel-street.

WANTED, a First-class LEASEHOLD SECURITY for the sum of 10,000l. at five per cent. And a good FREEHOLD SECURITY for the sum of 2,000l. at five per cent. Inquire of Messrs. LEE and PEMBERTON, Solicitors, 34, Lincoln's-inn-fields.

MANCHESTER EXHIBITION of PHOTOGRAPHS. The FIRST ANNUAL EXHIBITION will open on the 1st of MAY, at the Fine Art Gallery, Bridge-street. All contributions intended for exhibition or sale must be sent not later than the 19th of APRIL. Also all communications from amateurs or artists, not having had a circular, must be addressed to H. WHAITE, as above.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster Bridge-road, Lambeth, near Astley's Theatre, begs to call attention to his MATHEMATICAL INSTRUMENTS manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

N.B. A few New and Second-hand Lenses and Theodolites always for Sale.

PATENT SOLID SWISS PARQUETERIE.

This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s. per foot superficial, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARNOLD and SMITH and CO. 36, New Bond-street.

QUANTITIES LITHOGRAPHED to any extent on the shortest notice, and on the most reasonable terms. Scale of charges sent free by post. ARCHER and DANGERFIELD, Architectural, Engineering, and Mechanical Lithographers, &c. Printers, and Printers, 22, Bedford-street, Covent-garden, London.

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS. Exterior, Internal, Isometrical Perspectives set up; outlines of same neatly coloured, with background, on terms that will insure approval. Temporary assistance given in getting up Plans, Elevations, Sections, Details, and Working Drawings.—Mr. E. L. P. makes a consideration in his charge where competition drawings prove unsuccessful.

Address, 2, Haddonne-place.

MR. CLARKSON, Architect, and author of "Original Designs for Mural and other Monuments," supplies DESIGNS and WORKING DRAWINGS of every description for church decoration, &c.—12, Bartholomew-street, Bloomsbury.

TO ARCHITECTS and SURVEYORS.—BUILDERS' QUANTITIES printed with accuracy and promptness, and at nearly HALF the PRICE of LITHOGRAPHY, by WARREN, HALL, and CO. Caxton steam Printing Offices, 10, Cambrid ge-terrace, Camden-town

Estimates given when required.

TO ARCHITECTS

AN ARCHITECTURAL COLOURIST of experience engages to COLOUR COMPETITION and other DRAWINGS on reasonable terms; perspectives put in; outline drawings coloured for gentlemen in the country, and sent by post. Specimens of colouring may be seen.—Address, G. L. BEETH-LANE, 1, Millman-street, Bedford-row

DRAWING, &c.—One Guinea per Quarter. At the Establishment Pupils are thoroughly instructed in Architectural, Civil Engineering, and Mechanical Drawing; Ornamental, Figure, Figure, and Water-colour Drawing; Taking out Quantities, Measuring, Estimating, &c. &c.—For prospectuses, &c. apply to Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. Offices, 34, Guildford-street, Russell-square.

DRAWING CLASSES.—24, Guildford-St. For Architects, Builders, and Engineers' Sons, Assistants, Clerks of Works, Foremen, Bricklayers, Masons, Carpenters, Joiners, Mechanics, and Machinists in general; Measuring, Taking out Quantities, Abstracts, &c. Estimating, Architectural Colouring, Shading, &c. &c.—Terms, One Guinea per Quarter.—For prospectuses, &c. apply to Messrs. HYDE, SMITH, and LEWIS, at the Offices.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Pupils Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architecture, Civil Engineering, and Mechanical Drawing; Colouring, Shading and Tinting; Ornamental and Water-Colour Drawing; Perspective, Isometrical, and Sectional Drawing, Making Finished and Working Drawings; Preparing Specifications, Taking out Quantities, Estimating, Measuring and Valuing Builders' Work, &c. &c. Terms: Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter. There are no extras, the terms include the whole of the above, with the use of Drawing Boards, T Squares, Plans, Drawings, Models, &c. Prospectuses and all particulars may be had at the Offices, 34, Guildford-street, Russell-square.

CRYSTAL PALACE MUSEUM of NAVAL ARCHITECTURE TO SHIP-OWNERS, SHIPBUILDERS, ENGINEERS, STEAM-NAVIGATION COMPANIES, and OTHERS. The Directors of the Crystal Palace Company being about to form in the Palace a MUSEUM of NAVAL ARCHITECTURE, on an extensive and classified plan, exhibiting the progress of the art from an early period to the present day, with specimens of the most recent improvements, especially those applicable to steam navigation, and desirous to assist them in the object by contributing for exhibition MODELS of SHIPS, BOATS, MARINE-ENGINES, &c. A detailed plan of the proposed museum may be seen, and a number of models have been already collected; may be obtained from the Secretary, to whom all communications should be addressed

G. GROVE, Secretary.

Crystal Palace, March 1, 1856.

CRYSTAL PALACE.—PICTURE GALLERY.—It is intended to construct in the north wing of the Crystal Palace (at present occupied by the Fine Arts Gallery) a GALLERY for the EXHIBITION and SALE of modern PICTURES of all the Schools of Europe. The gallery will open early in the ensuing summer. No charge will be made for exhibition; but it is proposed to charge 5 per cent. on sales. Communications to be addressed to Mr. HENRY MOGFORD, F.S.A. at the Palace, in whose hands the direction and management of the gallery, and from whom full particulars may be learned. The Directors reserve to themselves a right of selection.—By order,

G. GROVE, Secretary.

PATENT TERRA-COTTA. Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crosses, Label Mouldings, Friezes, Trusses, Vases, Shafts, Capitals, and Bases of Columns, Paving, Facing Bricks, Coping, Kitchen and other Sinks, Chimney Shafts and Tops, and numerous other Articles, manufactured by J. M. MANFIELD, in Patent Imperishable Terra-Cotta, at Mill-wall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington basin

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequaled for permanency of colour, hardness, and brilliancy of surface; it is covered by no sulphurets or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that may be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the materials primarily made use of to produce it, an imperfect mode of preparation, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the results realised by the purchasers of such oxides becomes a very extensive resort to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in 1 lb. by Messrs. BLUNDELL, SPENCE, and Co.; when ground and dry, by Messrs. T. B. MORLEY and Co. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street City; and by the Manufacturing and Painting Agent, Mr. FREDK. BRABY, Fitzroy Works, Newroad. In Manchester and Liverpool by R. CLAY, Mersey-street, who is the only wholesale Agent for the Company for Zinc Paints, and distributes paint to ships, warehouses, building houses, &c. In Leeds, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. J. BUCHAN. The OXIDES and PAINTS are sold in 1, 2, 3, 4, and 5 lbs and upwards, to be had of the Company's Agents, in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isle of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

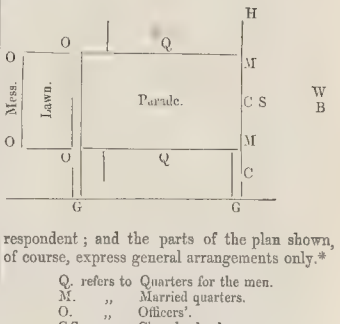
The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

The Builder.

Vol. XIV.—No. 688.

THE notices we have already given of the Barrack Competition Exhibition at Burlington House have brought us letters sufficient to fill the whole of our present number. To print them is manifestly impossible. We are, however, anxious to pay every attention to the points which have been laid before us; but shall have better opportunity for doing so after the interval of another week. We referred to the elaborate character of the drawings generally, and to the more than ordinary advantage offered through the opportunity of the study and comparison of so many different projects for the same work—one of great extent and comprehensiveness. The particulars and specifications sent with the several designs, since we wrote have been placed in the rooms, and afford us double ground for our opinion. For the success of the original object, and the interests of all concerned, the exhibition should be kept open as long as possible. Scarcely any department of professional practice is there, whence an individual may not receive some new light; and the remark will apply to the inferior class of the designs, as to what may be considered best. Whether the Government will need to go from England for a design for their proposed offices, "in order that we may at last have *some* building worthy of the metropolis," we will not at present consider; but we have abundant testimony now to what we have often asserted, that in the profession (taking it with all the demerits ascribed to the general body) there is no lack of skill, scientific knowledge, or artistic ability. What is needed in a pursuit like that of architecture, involving so many apparently opposite qualifications, is precisely that sort of interchange for which there is the opportunity in the present case—though we wish it could be afforded at less cost to individuals, as well as with less danger of injustice.



It is indeed *painful* to us to see the amount of labour which is incurred, from planning and calculating down to mounting and straining—and the positive money outlay—and to note the merit of many matters of detail, in cases where we detect an error in the very first conception of plan. And it is not always clear from the report what degree of latitude was permitted, or what attention was to be paid to any different impression deduced from the evidence. To the competitors who were concerned in the strictures of our correspondent last week, it is at present due to state this. Remarks that we make now can apply only to arrangements for a similar object in future. For, it seems to us that the plan of collecting evidence in cases of such a nature has many advantages. Any competitor, however, should feel free to digest evidence, so that he might give form to his own ideas, rather than to the conclusions of a committee. The whole evidence here was printed, and the existing barracks were thrown open; but, on the other hand, the leaving some *minor* points in express terms, to the discretion of architects, was liable to induce the inference that no discretion could be allowed generally. Thus, in the majority of cases, apprehension has been felt about departing from the terms of the report: in other cases the report has been even *blindly* followed; and there are few designs where the judgment has been allowed entire play. It is not absolutely necessary to detach the ablution-rooms and other adjuncts to great distances, and there might be ways of arranging kitchens other than what is known at the barracks at Birr. The permission which some of the competitors conceived they had as to distinct day-rooms, and the provision of kitchens detached, has led to the arrangement of plans, where dinners would have to be carried some seventy or eighty feet,—"by a *covered* passage," indeed,—but otherwise through the open air. These errors would hardly have occurred where *architects* were free to act. Again, the views of certain authorities as to peculiar and incorrigible habits in the soldier, are very difficult for the civilian to reconcile with what he hears about discipline. In other cases, the requirement of the cricket-ground has hampered the designer. It would have been better to assume this as to be provided outside the walls,—as it surely must be in expensive sites, and might be in all; at least the comparison of the designs would have been facilitated by uniformity of views taken of the indispensable barrack-building area.

The design No. 7, with the motto "In Omnia Paratus," shown in an effective set of drawings, has the entrance in the centre of the side of the parade-ground, with the men's quarters along the opposite side, and the officers' rooms at each end. Behind the men's quarters are large recreation-courts, with the married quarters, schools, &c. at one end, and the hospital at the other, the stores being along the back. The decorative character of the design is given by the general use of arcades on the two stories, the materials being red brick and stone. The parade-ground is extended by lawns. There are large archways of entrance, and through the range of the men's quarters.

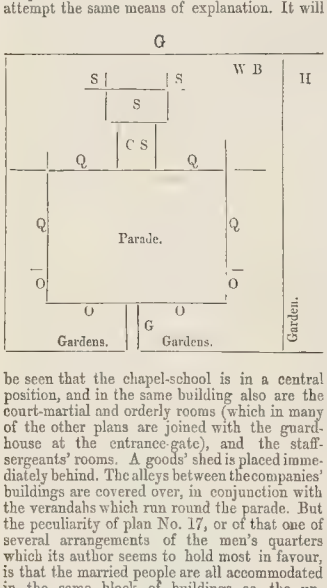
In No. 10, with the motto, "Victoria," in a wreath, by Messrs. J. T. Wood and R. Pope, the arrangement of the men's quarters, parade-ground, and entrance, is similar; but the officers' quarters are placed along the entrance side, with a space along that side intervening. The chapel-school is at one end of the parade, and a large covered drill-shed at the other. The various stores are at the back,—the married quarters being to the extreme left (looking at that part of the plan), and the hospital to the right. The plan of the men's quarters corresponds with what has been adopted in the majority of the designs. The range of building is in two stories; each company has separate stairs; and four rooms for twelve men each, and lighted from the ends, are on each floor. The rooms are back and front, with open courts between. The serjeants' rooms are adjacent, being in this case placed across a passage, an arrangement which the plan would allow to be modified. A dining-room, separate kitchen, ablution-rooms, and cleaning-rooms, are beyond open courts at the back, and are one story in height. There are broad ways through the line of quarters at two places. This design is of plain Italian character. A second design is carefully studied in the Gothic style. The hospital in the former case has open galleries on both floors, all round.

No. 11, "Nec Aspera Terrent," appears also to comprise more than one general design. The plan has the chapel at one end of the parade, and the hospital at the other; the officers' quarters, gate, married privates, washhouse, and prison, are along the front; and the men's quarters are at the opposite side of the parade, with the orderly-rooms in the centre. At the back are yards attached to the stores, canteen, amusement courts, and (what is to be found in other designs in the collection) a circular bath, on the principle of that suggested and lately illustrated in our pages. There is a large covered space for drill at one end of the ground, and a gymnasium near the hospital. The range of building forming the men's quarters is in three stories, and is thus arranged. A corridor, 16 feet wide, with skylight roof and ventilators, runs from end to end of the building, the full height. At the level of the several floors, openings being left in each, galleries are formed. Each company has two dining-rooms on the ground-floor,—the end of the room being parted off as a cooking-place. The ground-floor back is occupied by the barrack-master's stores, cleaning-rooms, &c. On each of the two floors above are four rooms, for twelve men each, with ablution-rooms and serjeants' rooms. There is some little defect in the position of some of the latter rooms as to inspection. The principal design, of good Italian character, is well treated; and two views of the parade-ground, in pencil, have the buildings outlined in masterly style.

No. 12, "Ne Jacto," looks as if it had come from the same drawing-board as design No. 80, upstairs; but it is on a much smaller area of ground, and makes no pretension whatever to decorative character. We counted thirty-four drawings, and all were most carefully executed—full tables of scantlings being added. If any importance is to be given to the principles which have been set forth in our pages, the design deserves some attention. The company's quarters are in detached blocks,—five on each side of the parade-ground. The latter is of the specified size,—250 by 100 yards,—but added to one end, before the officers' quarters, is a lawn. But we may as well adopt the convenient explanatory method used by our correspondent last week. The principal letters of reference are as those used by our correspondent; and the parts of the plan shown, of course, express general arrangements only.*

Q. refers to Quarters for the men.
M. ,, Married quarters.
O. ,, Officers'.
C S. ,, Chapel-school.
C. ,, Canteen
S. ,, Stores and other offices.
G. ,, Gates.
H. ,, Hospital.
W B. ,, Washhouse and baths.

The detached buildings, or men's quarters, are shown with four different arrangements for each. In all, the entrance is either at the side, or at the back; and this is, perhaps, a defect. Most of the walls are proposed to be built with cavities; and generally both the drawings and specification show that the construction has received great attention. In some of the plans the infant schools are placed at a distance from the principal school building,—though near to the married quarters. Here these several departments, with the library and the washhouse, are adjoining each other.



No. 15, "Sevastopol," has a plan wholly different to any of those preceding. Let the reader suppose a circle as the centre of a build-

* By an error of the press last week, in the reference to the plan, the word appended to O. was printed without the letter R. The reference should have read,—O Officers. Our own statement as to the back-yards of Design 2 was correct. Our correspondent was in error in saying there were none. He did not include the rear blocks of building; and the numbers of the Companies seem to have been misplaced. Of course, the plans are given to explain general distribution only; and many buildings are omitted.

ing, inscribed in a square of somewhat larger diameter (if we may so apply the terms), and round the square a covered space 43 feet wide, with galleries of communication at the heights of different floors, along it. Suppose the covered space to be prolonged to form eight arms. The latter are appropriated to various purposes, dormitories included,—the sergeants' rooms being at the angles, or intersections. The central circular space forms a general kitchen; the space between that and the square is appropriated to washhouses and stores; and in the space of 43 feet are dining-tables. The whole forms the centre building of the barrack. Round it are grouped the hospital and the residences of the married soldiers, married officers, and unmarried officers; and a parade is provided in front of all.

In No. 16, "Pro Aris et Focis," though rectangular forms are adopted, the kitchens are similarly placed, or all together, in the centre, with a lofty smoke-flue; the barrack-rooms come next, and the other buildings are at each end.

In No. 17, "Con Amore," we have a plan much resembling No. 12,—though each one has its peculiar advantages. The author of the present design—Mr. Kerr,—though he exhibits few drawings, has shown by his written particulars and specification that he has gone very carefully into the subject. Taking the parade-ground as the basis of his design, he also groups the officers' and men's quarters round it; also placing the latter in detached blocks, so as to get isolation of the companies and the advantage of frequent through-passages. Otherwise, his plan differs from No. 12;—but we had better attempt the same means of explanation. It will

be seen that the chapel-school is in a central position, and in the same building also are the court-martial and orderly rooms (which in many of the other plans are joined with the guard-house at the entrance-gate), and the staff-sergeants' rooms. A goods' shed is placed immediately behind. The alleys between the companies' buildings are covered over, in conjunction with the verandahs which run round the parade. But the peculiarity of plan No. 17, or of that one of several arrangements of the men's quarters which its author seems to hold most in favour, is that the married people are all accommodated in the same block of buildings as the unmarried of the same company,—though of course with proper separation and distinct entrance. He is led to this view by the arguments which there are against placing any of the privates in a building detached from their companies,—arguments which were apparent in the evidence of Col. Wood and Lord Cardigan, and indeed of others. The wives of the company and pay-sergeants are unavoidably accommodated in the same building; and Mr. Kerr thinks that this rather strengthens the argument against removing the others. He, therefore, in one of his arrangements, has the six rooms for married privates, with the pay-sergeants' rooms, and spare rooms for staff-sergeants, on the ground-floor, with a small yard alongside the alley, from which is the entrance to this quarter; whilst the entrance for the unmarried (and, of course, unavoidably also for the company sergeants) is in the centre of the block, or directly from the parade. The latter entrance is by an arcade, through which access is gained to a covered yard, and through that to the two dining-kitchens, and attached cookeries, and round to the conveniences. The staircase ascends from the arcade; and also leading out of it are, on one side, an ablution-room, and on the other a cleaning-room. His other plans are based on the supposition that the recommendation as to married quarters in the report might after all be carried out,—and which quarters he would have then to provide somewhere else. The chief difficulty in the working of the first plan would arise from the distance that the married women would be from the spot where the author of the design has to place the general wash-house—which, in other plans, is appropriately attached to the married quarters. And he is hardly correct that the distance might be traversed without inconvenience. We do not lay much stress upon a slight gap in the covered way which he contemplates for the whole distance; but the position of the doorways to the yards would be objectionable: these, however, might be altered. The suggestion which we would venture to throw out, is, whether a small wash-house might not be combined with each company's buildings. Much may be done with the heat of a single kitchen fire,—as indeed is shown in the design, No. 7, mentioned in our last. The barrack-rooms in design 17, with the arrangement described, are provided on two upper floors. There are two rooms on each floor, or each room for one squad. The rooms have the windows and fire-places at the ends, and have a removable division running partly across, midway in the length. The entrance is from a wide corridor (which is at the top of the stairs, and gives access also to the serjeants' rooms) in the centre; and on the opposite side is a large window in a recess—where also are appropriately placed a closet and other convenience for night use. In his elaborate essay accompanying the design, Mr. Kerr sets forth the principle, that whilst buildings such as industrial schools, workhouses, asylums, and the like, require to be treated each as a household, a barrack is not at all of that character, but is rather a military *village*. The hospital, we should say, he has wholly apart, and occupying a strip of ground at one end of the general plan, and it is made accessible from the back-yard rather than from the parade-ground. Small apartments for female nurses are preferred to barrack-rooms and "orderlies." It seems to us that some credit is due to Mr. Kerr for the clear basis on which he has placed the subject. There are points in which his plan and No. 12, each have peculiar advantages; and both plans deserve the careful consideration of the committee. Both appear to be practicable with small outlay.

No. 18, "Pax in Bello," with the entrance at one end of the parade, and five companies on each side, has the barrack-rooms all on the ground-floor,—the dining-rooms being ranged at intervals along the fronts, and the kitchens some distance in the rear.

In No. 19, "Utilitas,"—a Gothic design,—the entrances are placed at the angles, at one end of the ground. The roadways leading from them into the parade-ground, twist about in their course,—but as a similar arrangement practically results from the position of the guard-house opposite the gate, in the third premiated design, we presume that military authorities entertain no objections. The kitchens in this plan are arranged in two stories. We are ourselves not aware of any valid objection to the similar arrangement so much commented upon in the first premiated design.

No. 20, with a horse-shoe and the motto "In Spe," in the general outline is an attempt at symbolism. The outline of the plan in the present case is a pentagon, with a projection from one angle for parade-ground. In the latter are the chapel, canteen, and guard-house, and the general area has the mess-house in the centre, with the officers' and men's quarters grouped about in detached buildings, joined by covered ways. "The projectors of this plan," we quote their very words, "submit that as most armies, being divided into fifties or hundreds, a pentagon or decagon are figures best adapted for a model barracks of infantry." We fear we could find other cases where the shadow has been grasped to the loss of the substance.

No. 21, bearing a penny postage-stamp, has the appearance of a careful set of drawings,—portions which are shown in perspective being designed in an effective version of the Italian style, and nicely drawn. The plan, however, has some radical errors. The entrance is at one end of the ground into a fore court, with covered way round; and opposite are the officers' quarters—the parade being beyond. To get from the court to the parade, unless the troops went under the verandah, and round by one of the ends of the officers' quarters, they would have to go through the central cortile, where the openings between the piers do not seem to exceed 6 feet.

The only note which we have made as to the design No. 22, marked with a device and the name "Hiram," is that the author advocates the glazing of the windows with polished plate glass. No. 25, "Dum Spiro Spero," errs by providing a parade-ground of as many feet as there are required yards; whilst No. 29 puts the company sergeants eight in the same room, instead of adjoining their respective squads. It is saddening to see the waste of the labour of months, from the omission of an hour's reading and thought.

No. 26, "Argonaut," has the barrack-rooms arranged in two principal buildings, each on cruciform plan, the chapel being intermediate.

In No. 30, "Comfort," the plan absorbs a large area, a cricket-ground being placed in advance of the officers' quarters, which are to the front end of the parade. The school is at the opposite end, with the hospital behind, and the men's quarters are at the sides. No guard-house is placed at the gate: and the omission of a ready access to the hospital, according to the arrangement of walls and openings shown, is an important one. Errors of plan continue to force themselves on our notice as we pass on. Even in No. 31, "Numero, Pondere, Mensura," Messrs. G. and H. S. Legg, after passing through the gate near one end you have the choice of the road which takes you round a long journey by the backs of the officers' quarters, and seems to end "nowhere;" or you may jostle through the thickly-set columns of the verandah, as the direct route. The main quadrangle does not seem to be intended for parade, but is laid out with lawns, the men's quarters looking towards it; the officers' quarters being at one end, and the school and stores at the other. Behind the latter is the actual parade: but we should fear that, presuming the troops to get formed within it, to find the man who could lead them from it, would be about as difficult as the great duke said it was to meet with generals who knew how to get a few thousand men well out of Hyde-park. The cricket-ground is advisedly made *accessory* to this plan. It may be our duty to specify defects,—even where works have otherwise high merit,—but judging from some of the designs in the present exhibition, it might be more difficult to make good plans when unrestricted to ground, than under the ordinary circumstances. The sudden possession of riches has turned the heads of some of our friends. Ground and money *à discrétion*, and a level stage:—never did such unlooked-for strokes of fortune (or of fate) concur to bewilder the British architect. Need we whisper to all who habitually blame this restriction, or that lack of advantages, that *limited* means are often those of which the best use is made,—that not all is gold that glitters, or—

"A certain truth which many buy too dear,"—

that true *economy*, as understood from the days of Vitruvius to 1856, is a quality in all good *art*, and irrespective of the money paid. It is simply a doing the most with the materials which there may be—whether called poor or costly,—and letting no opportunities be lost.

The design, No. 34, "Britannia," has the several buildings arranged on the plan, with particular attention to symmetry. The main entrance is, as in most cases, in the middle of one side of the parade, the men's quarters being along the opposite side of it,—the stores at one end, and the officers' quarters at the other. The usual appurtenances of the men's quarters are at the back, where also are the married men's quarters and the hospital, in

corresponding blocks of building. The infants' school is placed near to the married people, and thus detached from the principal school, which is near to the parade. The men's quarters are planned on a principle somewhat different to what is found in any of the other designs. Thus, a corridor, the full height of the building, runs along the centre, and is lighted from the top. This is used, on the ground level, as a dormitory, and is bounded by dormitories on each side, two floors in height; and outside there are day-rooms, in two stories. The cooking places must be 80 feet or more, distant from the day-rooms.

No. 35, "Competitor," Mr. H. H. Fulton, provides kitchens in the basement, but is chiefly remarkable for its fireproof construction, and for the attention which has been paid to the warming and ventilation. The latter is partly maintained through channels left in the boxed girders, and through the cavities of the hollow-brick arches. The fresh air is admitted at the upper part of the room, and the exhausting force is obtained by the heat of the kitchen flues, which are formed with iron withes.

No. 36, with the motto "Excelsior" in a trefoil, Mr. C. F. Hayward, has the parade towards the further side of the ground, with the officers' quarters at one end, and the hospital and chapel at the other; and has the prison, orderly-rooms, stores, washhouses, and canteen, and two entrances along the front, and the intermediate ground occupied by the men's quarters. These last form two rows of detached buildings (along with staff-sergeants' and married people's quarters), the longitudinal space between the rows being covered with a light iron roof. The company sergeant has two rooms, and is conveniently located for inspection at the angle formed by the meeting of two barrack-rooms. The decorative design externally is Italian in style; but the bossed and rusticated work has considerable novelty: and the whole possesses what modern architecture sometimes stands much in need of—to wit, *character*. The entrance-gateways, and all other portions display taste.

No. 45, by Joshua Constable, a clerk of works at one of the encampments in Ireland, provides as parades two similar spaces, one gravelled and the other with grass,—the latter serving also for a cricket-ground. Together, these may measure 1,400 feet by 600 to 700 feet. The buildings are widely detached: but the plan is chiefly remarkable, as compared with others, from its being designed with a view to defence,—all the faces of the walls being disposed so that they might receive a raking fire from other parts.

We have still many designs in this large collection unnamed. We must, however, hope on another occasion, to speak of some of the most deserving. Where there is so much, it is difficult to gather a moderate proportion of the features of the several productions, or to deduce at once all the results of the reflections upon the subject of barrack accommodation which are embodied in the designs, or of which the present exhibition has been the occasion.

But pending the settlement of what principle of arrangement should be acted upon in building,—let us set down a few points which have impressed themselves upon us.

To learn the exercise of a soldier, space is required, and this should be inclosed from the public gaze. Men must be lodged and fed, and means of privacy, decency, comfort, and health should be secured. So long as we must have men to bear arms, we ought to see to it, for our own sakes, that they are not morally vitiated. Now, men cannot eat, drink, undress, and sleep in common without contamination. One black sheep, &c.—a little leaven, &c. Barrack-rooms at present are vitiating to the last degree, as one foul-mouthed fellow can taint the hearing of a hundred or more men, day or night. There is no escape. All over the country there is a movement in favour of improved dwellings for labourers, the great improvement being isolation in the dormitaries. Prisoners have their separate cells: why should soldiers be compelled to herd day and night in one room? There is no more degrading practice than that of sending men in crowds to obey the calls of nature; but to compel them also to traverse long distances is physically most injurious, as it induces neglect. Any medical man will say how injurious to health this is. One of the greatest comforts of British civilization is a clean water-closet, close to ordinary living-rooms. Now, if the poorest person in any community can have this convenience, there is no reason why it should be denied to the soldier. Then as to barrack sewers and drains. All sewers and drains should be external, that is, they must not be beneath nor within the main walls of the living-rooms, nor cross under floors. Many barracks, asylums, union workhouses, and large schools, are situate over sewers, drains, and cesspools: the consequences are, a vitiated atmosphere at all times, and disease in excess. If full examination of all barracks in which British troops are quartered were ordered, and a truthful report drawn up, the world would be startled at the horrible revelations made. There are barracks in which the soldiers are never healthy, and hospitals in which the sick never get well. The Mayor of Portsmouth said once, in open court, at an inquiry in Portsmouth, that he had that day declined an invitation to dinner from one of the dockyard officials, as he never went without being made unwell by the barrack smell. The Town Clerk said, "I know where you mean, and have also, on more than one occasion, declined invitations for the same reason."

There are barracks in the colonies so fatal that officers make their wills, and men give up hope of life, when they are ordered to the stations, where places have been built by contract, the contractors finding site and building,—the site being a swamp—because the land was cheap.

An examination of the Continental barrack accommodation would show Great Britain and France to be behind all other nations;—the Turk and Russian ranking first: the barracks of these two nations are extensive in plan, grand in design, and most convenient in arrangement. The buildings generally form hollow squares, and are two or more stories in height. The great barrack at Scutari, which the British now use as an hospital, is three and four stories high. There is a corridor running all round on the inside, glazed: rooms open out of this corridor: the privies are at the inner angles. In the centre is an elevated water-tank, with fountains. Each side of this square is some 2,000 feet long. The corridor is about 18 feet wide, and each story about 15 feet in height. The barracks at Kulali are on the same plan, but here there is no corridor, but a central open space from floor to roof, with side galleries; no separate rooms. Most of the large barracks in Turkey are modern, and were built by the late Sultan. German architects were, we believe, employed. We have reason to know that should Government ask for a report from the Sanitary Commissioners lately in the Crimea, plans would be given, as also plans and details of huts, tents, &c. Why, then, is it not asked for? The French overcrowd most sadly, and neglect all sanitary arrangements: water is used sparingly, and ventilation is not thought of. The result is well known.

REVOLUTIONARY ARCHITECTURAL PRINCIPLES.*

It is some relief, whilst continuing our colloquy with Pre-Raffaellitism, to escape, though but for a moment, a direct personal conflict. I said that the "leading journal" had begun to swell the chorus: here is the passage referred to; it relates immediately to Regent and Oxford streets:—

"But a worse fault is the *falsehood* of all the decoration. It is all paint and plaster: below are good bricks. . . . . Compare the fronts of these houses with the backs: *the front is all smiles and hypocrisy—the back tells the ugly truth that the greatness is got up for show.*"—*Times* for Dec. 26, 1855.

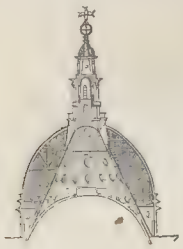
There is no mistaking the relationship, though there may be the authorship, of this passage; nor can I hesitate to join issue with the principle it proceeds on.

Let me free myself, however, from misapprehension. That consistency is an architectural virtue, and that there is a positive beauty in intrinsicalness, is not disputed. Whether the streets, therefore, here referred to are, in these respects, in good taste, is not my question. It may be simply preposterous to build rows of shops like rows of palaces; or it may be that such building is but an exhibition of our national character—a telling all whom it concerns that we have brought society to a state of fusion; that we make a glory of our trade and commerce; that we profess to be the "nation of shopkeepers" our neighbours call us. On these matters I make no assertion: still less shall I attempt to extenuate such enormities as ponderous columns reared on panes of glass. I address myself exclusively to the principle of the passage.

Now every one knows that truth and falsehood are not in verbal expressions, but in what is intended to be understood by them. Micaiah said to Ahab, "*Go and prosper;*" yet Ahab was not deceived, nor was Micaiah a lying prophet. Is there deception in the case before us? Did the builder employ brick, and charge for stone? Does the spectator believe in stone?—was it meant that he should do so when he looks on brick? If neither, where is the falsehood? Let us take care we are not ourselves calling things by their wrong names. "*He that excuseth the wicked, and he that condemneth the just, they both are an abomination to the Lord.*"

But let us go a little further. Irrespective of deceptive falsehood, is there immorality of any kind in concealing "the ugly truth?" in covering the inferior with a more agreeable or becoming material? If so, then, how did Solomon overlay with gold "*the altar which was of cedar,*" and "*the cherubim,*" which were of "*olive-tree;*" and even "*the floor,*" which was, as we should say, *of deal?* And why did Bezaliel, "filled with the spirit of God," overlay "*the ark of shittim wood*" and "*the boards*" with gold?—(Exodus xxxvii. and xxxviii.)

There is a further word about "*front and back.*" Is this also a criminal question? Is there to be no longer distinction between "*comely and uncomely parts?*" It needs no words to show how much of the interest of architecture is in the answer,—how things would infallibly range themselves under the alternative of either making the back like the front, or else the front like the back. But what a requirement! How would either of the inmates of those houses be astonished were he denied the liberty of distinguishing between the every-day "parlour" and the more sumptuous "drawing-room;" or his blushing partner, challenged, on her way to an evening party, with having, beneath that specious velvet, some such ugly fact as a flannel petticoat?



I am not trifling with serious questions. Go again to that stateliest fabric before referred to. "*Your bodies are the temples of the Holy Ghost.*" By what economy are their vital processes concealed even from our own observance? Shall we call that fair skin a deceitful mask? With permission of the courteous "Westminster," *I* want to secure for "manliness, veracity, and morality," things that may be in no small danger of "dilettantism and conventionalism."

And I am not quite sure that it is art alone that is in jeopardy. I will not go into homilies: we have proof enough in human experience that scrupulosity may damage conscience, as superstition may destroy true godliness. Sanctimoniousness, sentimentality, "voluntary humility," asceticism, and fantastic morals have been ever so many loop-holes for religious feeling. There is something more than accidental connection between the straining at the "gnat," and the swallowing "the camel."

We have, in sooth, battles enough to fight without taking every ant-hill for an "earth-work," or invoking thunderbolts on moles and cobwebs. Still less need we call on architecture to assume the name of "Christian," and then turn false witness against its neighbour. Poor Pugin allowed himself a seeming triumph I hope he lived to repent of. There is an exhibition of the dome of St. Paul's that disgraces his book "On the True Principles of Christian Architecture," of which I trace the influence in the article before us; and which, as a sample of other things, it is high time to strip of authority it is not entitled to. That there may be no mis-

* See p. 171, *ante*.

conception, I give, as in a former case, ocular demonstration. Here is Pugin's section:—

The case is very simple: the external dome is not the only one; nor the one that supports the lantern. It were almost enough to add,—Who ever said it was? Yet this is to be written down a case of meretricious, false construction,—"a fictitious dome,—*not the dome of the cathedral, but a mere construction for effect,—a mere imposing show, constructed at vast expense, without any legitimate reason.*"—P. 9.

Now, it may be slowness of apprehension; it is not, I trust, querulousness, much less moral obliquity, if I venture to express serious doubts as to the grounds of this judicial verdict. On what principles is the giving to a metropolitan church an amount of external dignity beyond internal requirements, to be put without the pale of all legitimate reasons? And how long have Englishmen been,—or when and why should they begin to be,—ashamed, that the most conspicuous, magnificent, and attractive object that (bitherto, at least) has met the eye and given notice of their metropolis, should be that unrivalled dome which connects the name of London with that of the Apostle of us Gentiles? and how long has architecture been under vow of turning ascetic and abjuring "effect?" I might ask, who but a Puritan, a Papist, or an architectural fanatic, can look up at that glorious dome, lifting above the smoke and din of our monstrous capital the golden emblem of man's salvation, and pronounce the words, "fictitious,"—"mere imposing show," and "without a legitimate reason"?

Let us take bigotry in its own trap. If this dome is fictitious, and not the dome of the cathedral, because there is another dome seen, *though not exclusively*, from within, the crime must, of course, be incomparably more flagrant in all the thousand mediæval spires for whose "Christian" imitation we are to abjure these "pagan" domes. That magnificent lantern of St. Paul's does actually glorify the interior dome. What will be said of gigantic pyramids raised, "at vast expense," on lofty towers for no such purpose,—constructions so far from being the spires of their respective churches, that they are inaccessible, internally, to the scrutiny of a solitary jack-daw?

But our answer is not complete. Here is another section faithfully reduced, from Britton's "Salisbury."

I wonder who ever thought, before the days of Pugin and Pre-Raffaellitism, of charging Gothic architecture with double dealing, because it gave to Salisbury a double roof? and who would have expected to find Pugin's charge adopted ("Seven Lamps," note 8), by one who, treating of "Christian architecture," complacently calls the inner roof the "roof proper," and the outer one "the roof mask?"*

But here is something else. Our leading article speaks of "front and back"—fronts "*for show,*" *open to ugly betrayal behind.* Well; but look again at the Salisbury section, and you will find there also some "truth," we must call "ugly" on the same principle. The different tints distinguish between the front as it would present itself on the stranger's approach, and the actual building that front professed to represent. I leave the reader to say how much of *this* "greatness is got up for show."

For myself, I can affirm that though Salisbury front may be defective as compared with others,—wanting in majesty, grace, or the impress of a pervading thought,—it is a fair front notwithstanding; and, what is to our point, a virtuous front, for it is really and truly a *frontispiece:* it does not content itself, with a mere utilitarian terminating of the premises; but presents, not very skilfully perhaps, a surface of otherwise "useless wall," to intone what I trust may never be deemed a useless "cadence."

The pure legitimacy of all this I will not stop to argue further. It is unnecessary, of course, to multiply such cases; it is enough that these two pair off together. Let us have no more sweeping questions of "Christian and Pagan" turning, on palpable violations of common justice and common sense.

I cannot, however, leave the leading article without a word of further notice. There is something about *columns,* "regiments of pillars," "uselessness of Corinthian columns stuck on fronts," and "a tendency to profuse expenditure resulting in abominable ostentation," on which, though very far from denying all the premises or all the conclusions, or dissenting from much that is, to my apprehension, sound and valuable in the article, I must yet offer a remark or two. It brings us, in fact, face to face with a true counting-house maxim we are now systematically threatened with. I mean that all use of columns, save for what, on the very straightest principles, are for actual use, is wasteful, vicious, illegitimate, and inadmissible. I remember an encomium on a certain work of Sir Charles Barry, that it presented a *palatian* front without the employment of a single column.

Now, I hesitate not to call this a revolutionary and destructive principle, subversive of everything that makes architecture a fine art, and no less at variance with those great beneficent laws on which the Almighty architect has built the universe.

I will not stop to utilitarianize the column itself. It is true that it can scarcely ever be utterly useless. At the lowest calculation, it is a virtual buttress, and adds stability: perhaps our modern walls are not too strong. All this, however, I disdain to argue. Once admit the dictatorship of utilitarianism, and you have got to engineering, carpentering, bricklaying: you have done with art. There is, I know, the implicit common phrase of "*useful and ornamental.*" To that phrase, in its common usage, I, for one, cannot consent to subscribe. Between what is simply necessary to human existence, and what is but desirable for its accommodation, there is, of course, an absolute, essential distinction. Between things that, short of being thus necessary, are thus desirable, there are, of course, distinctions also, but of degree only, and not essential and absolute. If the word "*useful*" stand for anything short of what is necessary, then its distinction from "the ornamental" is therefore but one of degree only. The absolute contrast between the two is, I take it, a false contrast, like the contrast, no less common, between "sacred and profane history." All history, not fabulous, is the record of actions within the economy of God's moral government: what part of that record can be surrendered as profane? So "useful" means, I suppose, conducive to a proper end and purpose: if then, comeliness, befittingness, accordance with the great instinctive sympathies God has made us of—accordance with the great master-outlines and indelible emblazonry of his own workmanship, be, as I suppose they are, conducive to a proper end and purpose (and this is what I mean by ornament — all besides or beyond it is but disfigurement), where can you draw an absolute line between the useful and the ornamental? Who will say that ugliness is not an inconvenience? Or what would be thought of him who reading, "*Truly the light is good, and a pleasant thing it is to behold the sun,*" should straight say, "*Amen;* for light and heat give us corn and cabbage?"

I dare not trust myself on this topic, I have such a sense of the impiety and barbarity, as well as beggarliness of utilitarianism, as might tempt a volume rather than a parenthesis. Let me add one word of caution against "sophists, economists, and calculators." *Look well before you, ere you admit general principles.* "No columns save for actual use:" carry out the rule, and put down the consequence. Not a Norman tower or wall can, of course, abide it; nor an Early English arcade; nor anything Byzantine or Romanesque; nor, I had almost said, a single façade of all that architecture we shall ask leave of no man living to call Classical, and rejoice in. But this is nothing. If no pillars, then no pilasters; if none to support a needless cornice, then none to stand dummy beside a window; if no pilasters to windows, then none, of course, of those purely gratuitous pediments above them. What will you make of your façade? or of your principle? Take, if you please, the park front of Barry's, just referred to; there is not a single member that gives grace, or anything else that makes it palatian, which is not, in all other respects, as pure a gratuity as the columns you have repudiated. Let us understand where we are, and what we are doing. If "principles" are to be anything better than nine-pins, let us know with some distinctness what all these things are to come to—whether architecture is to continue its place and standing as a fine art—whether Apollo himself is to be put on this "prisoner's fare" of bread and water; to be brought forward from time to time, as before a set of hungry shareholders, with a sort of balance-sheet, from which all that does not go to swell the dividend is to be struck out and disallowed. If not, it is high time for the "*principiis obsta.*"

Leny.

* Stones of Venice, vol. i. chap. xiii.; vol. ii. chap. vi.

GOVERNMENT CONTRACTS.

Our attention is drawn to this subject by the publication of a tract, printed by Levey, Robson, and Franklyn, of Fetter-lane, London, titled "Considerations on the New System of Government Contracts," in which the author, "a Septuagenarian who carried 'Brown Bess' fifty-three years ago, and who has also had his share of mercantile experience and of contracts, with both our own and the French Governments," adduces strong reasons why the present demoralizing system of Government contracts should be put an end to. Nor does he show much favour to the system of monopoly and centralization, by means of which the cheap contract system is likely to be superseded by Government manufactories, in which "Peter Dicks" of office under a new form may idle away their earlier years, and pension off their later.

To craving for cheap things the public is indebted for that learned and ingenious science of sham which is now being exposed by our analytical chemists, and our microscopic examinators. To it also is the Government indebted for mortars that would need no shells were they only explodible amongst the enemy, and not amongst ourselves; for spades that crumple up, and picks that fly off at a tangent; for clothing full of "shoddy," and for preserved meat-tins full of something worse. The Government ought to abolish the cheap contract system as soon as possible, and, by offering a fair and moderate price for a good article, set an example of respect for integrity in manufacturing and mercantile transactions. It is well known that men who respect their own character and the reputation of their manufactures actually stand aloof from Government contracts. This is an ominous and most serious aspect of affairs. We talk of the corruption of Russian officials, and the worthlessness of Russian Government supplies; let us

NEW INDEPENDENT CHAPEL, OFFORD-ROAD, ISLINGTON.——Messrs. Lander and Bedells, Architects.

look to our own short-comings. The repentance of the Government, should they turn over a new leaf, and adopt the best means of procuring first-rate supplies, and, at the same time, of cultivating the *conscience* of those they deal with, may be the turning point of national repentance, and the means of rapidly putting an end to the science of sham; for thus the public will very soon be induced to open *their* eyes to the only way of obtaining genuine articles of consumption, namely, by ceasing to run after cheap bargains, and by permanently and for ever associating the "cheap" with the "nasty." But so long as the Government set the example they do in ferretting out the cheap, and hence in obtaining its natural correlative, not only will the nation be likely to persist in the same absurd course, but the character and status of our national manufactures will continue to fall deeper and deeper into the mire of universal disrepute, till at length the commercial and manufacturing greatness of Britain will be a thing of the past, and her name but a byeword of reproach.

As to timber and deals, the author of the pamphlet writes,—"On these I will say but little: the general respectability of the trade is undoubted. Still, no one who has visited Aldershott and Shorncliffe, or seen the frames, &c. of huts sent to the Crimea or Heligoland, can doubt but that, in some way or other, Norwegian and Canadian spruce of indifferent quality have found their way there instead of 'Onega.'

That Government should have advertised for the Onega deals of Russia when war had stopped their import, or that they should have overlooked altogether the much lower-priced and much superior article for hutting,—the *yellow pine* of Canada, is surprising. It is well known that their attention was called to these matters; but 'Gallio cared for none of these things,' nor did they hesitate to allow a Member of Parliament to become contractor!

It is a fact that, for exposed buildings, the yellow pine of Canada is superior to all others. It resists the warping by sun, as it resists leaking by rain: it is much more free from knot-holes, much lighter for transport, and easier to work. Of these qualities the Americans take advantage, in using it for the beautiful and water-tight decks of their splendid passenger-ships." The pamphlet is calculated to do good.

NEW INDEPENDENT CHAPEL, ISLINGTON.

The above chapel, designed by Messrs. Lander and Bedells, of Chancery-lane, is about to be erected in the Offord-road, Islington, by that portion of the congregation who seceded from the Rev. E. Davies's Chapel, in the Caledonian-road, and who have since that time assembled in Twyford-Hall, Caledonian-road. It is in the Gothic style, in the form of an octagon, and is to be built of brick, with stone dressings. It is calculated to seat about 800 adults and 200 children. There will be vestries, class-rooms, and other conveniences underneath, together with a spacious school-room, capable of accommodating at least 500 children. The cost of the whole, including lighting, warming, and ventilation, will be about 3,000*l*. We are asked to say that subscriptions will be thankfully received by Mr. G. Cuthbertson, of Wharf-road, King's-cross, for the committee appointed for carrying out the erection of the proposed building.

ON THE MANUFACTURE OF CROWN AND SHEET GLASS.*

To return to our flattened sheets. The sheets, when annealed, are drawn from the kiln and carried to the warehouse, where they undergo examination.

Sheet glass, blown by a less complex process than crown, is liable in the glass-house to a less number of defects, but the after process of flattening often makes up the deficiency; and the manner in which a sheet, spared by one process, is disfigured by another, is sometimes curiously provoking. Standing before the table of the "assorter," your eye lights upon a piece which, blown under an evil star, has imbibed in the glass-house every possible defect. The founder, skimmer, gatherer, and blower, have all stamped their brand upon it. It is seedy,—the vesicles, which were in the crown tables rounded by the rotary motion of the piece, here elongated by the extension of the cylinder: it is stony,—disfigured with stony droppings from the furnace; stringy,—thin threads of glass meandering over its surface; "ambitty,"—covered with stony speckles, symptoms of incipient devitrification; conspicuous with gatherers' blisters and blisters from the pipe,—badly gathered; badly blown,—thin here, thick there, and grooved with a row of scratches; and on this abortion the flattener chances to have exerted his most exquisite skill: it has passed through his hands unscathed, flat as a polished mirror, yet, from its previous defects, entirely worthless. Next comes before you a piece whose beginning was miraculous,—no seed, no blisters: it prospered under the hands of the gatherer and blower, and left the glass-house a perfect cylinder. But the croppie of the flattener marked it; the fire scalded it; dust fell upon the lagre, and dirtied it; scraps from the edges of the preceding cylinder stayed upon the lagre, and stuck to it; the stone scratched it; and the heat of the annealing chamber bent it. Such are the difficulties to which every cylinder is subject—those of the glass-house, and those of the flattening-kiln. Not all, however, are such as these: there are good as well as bad, but the good are generally in the minority.

The qualities range thus—best, seconds, thirds, fourths, and H, the latter standing for horticultural, and including all coarse glass, such as may be applied to horticultural purposes. The difficulty of escape from defects renders the best quality, as in crown-glass, three times as costly as the common. The expense of production to the manufacturer is in each case the same; the materials, the labour, the fuel, the same for each. Success, therefore, clearly hinges on the proportion of good glass which a manufacturer can obtain. The six qualities of sheet-glass may each consist of six different thicknesses, forming thus, in all, thirty-six varieties.

When this manufacture was new in England, the size usually blown was 36 inches long, and 20 wide. The usual size now is 47 inches long by 32 wide, and cylinders are occasionally blown 77 inches long, but large sizes and heavy weights are accomplished only by workmen of the first class. A sheet of this latter size, containing twenty-one ounces to the foot, would require for its formation a lump of glass upon the gatherer's pipe, of no less than 38 lbs. in weight.

The size which sheet-glass can thus reach is obviously a great advantage, and adapts it to many purposes from which the limited dimensions of crown are excluded. It was this glass

* See p. 185, *ante*.

that covered the Great Exhibition in 1851. A cylinder was blown to cut, as the phrase is, 49 inches by 30: this was sub-divided into three panes of 49 inches by 10. About 300,000 of these, extending over a million square feet, and weighing upwards of 400 tons, were the work of a few weeks, and this without absorbing or disturbing the ordinary produce of the manufacturer. The energy of the glaziers was equal to their task: 18,392 panes were fixed in the roof in one week, by eighty men, 108 panes being accomplished by one man in a single day.

But sheet-glass has its faults as well as its virtues: it is devoid of that brilliancy of surface for which crown is so remarkable. It is subject, also, to undulations on the surface, the precise origin of which it is difficult to explain. Mr. Shaw, in his admirable lecture on the glass manufacture, as illustrated by the Great Exhibition, speaking of this defect, says, "When the divided cylinder is softened by heat, and either allowed to flatten by its own weight, or flattened by the workmen, the concave interior of the cylinder has to expand, and the convex exterior to contract, as the curved surface becomes plane. Were this contraction and expansion to take place uniformly throughout the glass, the undulation in question would not occur, but since one part invariably yields somewhat more readily than another, perfect flatness cannot be attained."

It is, however, more probable that this undulation is produced in the operation of blowing, and is due to the double movement of the particles of glass which accompanies the formation of every cylinder, the one movement being parallel to the axis of the cylinder, and the other in planes at right angles to that axis.

Having thus briefly described the two distinct processes which converge in one result, a sheet of window-glass, I shall now notice the circumstances under which these two processes have attained their present position, and I shall here avail myself of the valuable information which M. Bontemps has provided.

We have no evidence whatever by which to determine the relative antiquity of these two processes. The cylindrical process is the only one mentioned by Theophilus in the thirteenth century, and this method was adopted by the Venetians, as the more uniform thickness which resulted from it insured, in their coloured glasses, a greater uniformity of colour. But in France, England, and the north of Germany, the cylindrical process fell gradually into disuse, as the demand for coloured glass diminished, and at length in these countries the rotary principle exclusively prevailed, but it was so imperfectly carried out, that the tables seldom exceeded 30 inches in diameter, and were of very variable thickness.

Bohemia, however, still retained the cylindrical process which she had learnt from Venice, and with such success that when the French were in need of large and good glass, they imported it from Bohemia.

Thus it was until the commencement of the eighteenth century. Then a French officer, M. Drolenvaux, formed the project of introducing the Bohemian method into France. He constructed a company, brought workmen from Bohemia, and established a manufactory at Lettenbach, in 1730, with great success.

From this resulted, in France, Belgium, and the north of Holland, where the style of building required panes of large size, the abandonment of the rotary principle and the adoption of the cylindrical; and towards the close of the last century, a manufactory, near Abbeville, in Normandy, one in Hanover, and two others near Bamberg and Aschaffenburgh, were the last in which the rotary method was employed.

The last of these, that near Aschaffenburgh, was visited by a glass manufacturer in 1844, and he was much surprised at the very slow and unsystematic manner of proceeding which prevailed there. The gatherers held in their mouths a piece of pasteboard, turned up so as to protect their faces. The nose of the glass, after it had left the pipe and was attached to the ponty, was helped open with a piece of wood, and, after the table had been formed, it was laid upon a bed of small coal or coke and the ponty detached. The table was then piled in the annealing kiln.

In England, the manufacture of crown glass maintained its position, notwithstanding its abandonment abroad, and attained to such superiority over the spread or broad glass, to the rudeness of which I have alluded, that the former was used for all houses of the better class, while the latter was confined to poorer dwellings.

The inferiority of this spread glass, manufactured on the German principle, but by no means so good as the German glass, tended to prejudice the public against all glass manufactured on the cylindrical principle. This prejudice was, however, gradually overcome by the establishment in England of the manufacture of cylindrical glass, according to the process which I have already detailed, introduced from France, and from which resulted a glass which entirely displaced the manufacture of spread glass.

The introduction of this new manufacture was due to Mr. Chance and Mr. Hartley, who, on visiting, in 1830, the works of M. Bontemps, near Paris, were much struck with the advantages of the glass made on this principle, and, having secured the co-operation of M. Bontemps, they commenced the process at their own works in the autumn of 1832. So great, however, were the difficulties to be overcome, that it was not till 1838 that the manufacture of this glass was completely established. Since that time there has been great progress; and the sheet glass now manufactured in this country, though inferior in colour, is in other points generally superior to that of the foreign teachers.

A further development of the sheet-glass manufacture in England was the process of grinding and polishing this glass by machinery, whereby a new branch of manufacture was established, which has furnished glass peculiarly applicable for purposes for which none previously existed.

A fitting companion for this, though not within the limits of blown window-glass, is the remarkable invention of Mr. Hartley, by which glass, conveyed directly from the glass pot to a table, is rolled into sheets without employing in each operation more glass than is wanted for each plate of glass, however small it may be. This glass is admirably adapted for those purposes in which translucency only is required.

The greatest stimulus, however, that has been given to the crown and sheet glass manufacture was the abolition of the duty in 1845. That abolition has produced a somewhat paradoxical result. While the quantity of glass made has increased in the proportion of three to one, the number of manufacturing firms has diminished in the proportion of one to two. In 1844 there were fourteen companies engaged in the manufacture. In 1846 and 1847, following the repeal of the duty, the number had increased to twenty-four. The glass trade, after the removal of the heavy burden imposed upon it, seemed to offer a fair opening for money seeking investment. The demand for glass was so great that the manufacturers were in despair. Glasshouses sprang up like mushrooms. Joint-stock companies were established to satisfy the universal craving for window-panes. And what was the result? Of the four-and-twenty companies existing in the year 1847, there were left, in 1854, but ten. At this time there are but seven in the whole United Kingdom. Two, established in Ireland, have ceased to exist. In Scotland, the Dumbarton Works, once famous, were closed, in 1831, by the death of the partners, afterwards reopened, and again closed. The seven now existing are all English.

I turn, in conclusion, from this somewhat melancholy picture to a more cheering subject, the great ends which, from small beginnings, this manufacture has accomplished. The glazier of Pompeii little dreamt that the time would come when the substance that he handled, then so rare, would minister through the world to the health and pleasure of mankind; that beneath it trees would flourish, transported from a foreign soil; and that, cheaper than wood itself, it would combine with iron to form the largest building on the earth. But from Pompeii to the Crystal Palace there has been a progress of nearly twenty centuries, and a still greater progress in action than in time. That progress has been marked by no sudden revolutions, such as have distinguished the development of other efforts of mankind. The problem of blowing glass into a sheet admits of limited solutions, a cylinder or a sphere. Through one or other of these forms the first blown sheet cannot but have passed, and through one or other all pass now. But the progress has been none the less for lack of revolutionising discoveries. Minute and apparently unimportant changes, perceptible only to those near at hand, have in silence done their work.

Still, the development both of its processes and its applications is incomplete. Sir Joseph Paxton's glass arcade, stretching over the streets of London, and Dr. Sleigh's city of glass, in which invalids will inhale the gentle air of Madeira,—these are faint foreshadowings of the destiny of this wonderful substance.

And, perhaps, the day may come when some future chronicler of glass shall smile at the barbarians of the nineteenth century, who could not make window-glass without defects, and shall exhibit those defects as the curiosities of a bygone age.

THE CHURCH OF STE. CLOTILDE, PARIS.

The scaffolding which surrounded the principal entrance of the new church of Ste. Clotilde has been removed within the last few days and has exposed to view one of the best portions of the building. We use it as the occasion to give an engraving of the exterior of the church from a drawing made on the spot for the purpose. A sketch of one of the smaller entrances will be found in our 12th volume, p. 602. The church is situated in the Rue St. Dominique, not far from the Chamber of Deputies, or, as it is now called, of the *Corps Législatif*. It has been about ten years in progress, and has cost a very large sum of money. The sculptor has been allowed to exercise his skill: the windows are filled with stained glass; and the walls and vaults of the chapels are decorated with colours and gilding. There is a largeness about its proportions which is striking in a modern work of pointed architecture, but many of the details are pinched and mean, and the foliage in parts is poorly carved. The triforium is flat and ugly. A large number of artists have been employed both in the carvings and the glass, and a varied feeling is of course observable. One series of the windows, ten in number, was designed by M. Galimard and executed by M. Lusson, of Metz. Some of the French critics, after praising the work of M. Lusson in several respects, and acknowledging that most of the windows are harmonious in colour, complain that the drawings have not been followed so accurately, especially in the heads, as they should have been, and urge that artists should themselves become glass-painters for the execution of such works.

The church of Ste. Clotilde must be regarded as the largest and most important modern work of Gothic art in France, and will probably prove

"The fruitful mother of a hundred more."

PROJECTION CASES IN THE METROPOLIS.

Your correspondent, "District Surveyor," prejudges the case. The Board of Works have the power to grant permission, and no clause in either the Building Act, or the Metropolis Local Management, says such works may not be executed. Not only is it not so said, but, in addition, it is distinctly stated that, subject to the consent and approbation of the Board of Works, such works *may* be carried out, consequently a *primâ-facie* case exists of their admissibility. But, after all, the word "projection" is the word to be defined, as also is the word "building," and also the words "regular line of the buildings." Strange to say that none of these important points are to be found in the interpretation clauses of the Act. Consequently every individual may form his own—possibly very inaccurate—conclusions on the matter. But one point only is clear, that every case must stand on its own merits, as every one would be modified by the particular circumstance. What are, and what are not, "projections,"—and what are, and what are not, "buildings," must be defined. It is needless to say that what really infringes on, alters, or varies a line of street should be strenuously resisted, but a line may be improved by a filling in of spaces between buildings that have for many years been brought forward and existed as buildings.

Tempora Mutantur.

THE CHURCH OF STE. CLOTILDE, PARIS.

PROVINCIAL NEWS.

Lynn.—The new workhouse, according to the *Norfolk Chronicle*, will be fit for habitation by Midsummer. On Friday in last week the tenders for gas-fittings were opened, and that of Messrs. Wheeler, of Nottingham, for 127*l.* being the lowest, was accepted. The others were 143*l.* 158*l.* 210*l.* and (on a different plan) 257*l.*

Cradley.—The new National School-rooms, erected here, from the designs and under the direction of Mr. F. S. Smith, of Stourbridge, architect, have been opened.

Ripley.—New National Schools have been erected here at the expense of the Butterley Ironworks Company. There are two school-rooms, capable of accommodating 300 children, and having a class-room and teachers' residence attached to each. They are warmed by hot water, and ventilated by a patent process. The architect was Mr. H. I. Stevens, of Derby, and the cost of the whole upwards of 2,300*l.* The two school-rooms are each 54 feet by 18 feet, and separated by a wooden partition easily removable, so as to form together a room of 54 feet by 36 feet. The class-rooms are 18 feet square, with fire-places and ovens to warm the children's dinners. The whole is supplied with gas from the Butterley Ironworks. A new kind of desk has been introduced into the schools, so constructed as to form either table, desk, or bench, with little trouble. The schools were opened on Friday before last.

Preston.—On Thursday in last week, the foundation stone of a new cotton spinning-mill was laid for Mr. T. C. Hincksman, in Crott-street, near the Maudlands railway station. The stone was laid by Mrs. Hincksman, and a bottle placed under it contained the names (amongst others) of the different contractors, viz. Messrs. Watson and Alsup, engineers; Messrs. Cooper and Tullis, masons and bricklayers; and Mr. Tomlinson, joiner. The mill, when completed, will be 125 feet in length, 93 feet in breadth, and four stories high.

Dundee.—The new Royal Exchange here, in West Panmure-street, was inaugurated on Tuesday in last week. Its erection was set about some three years since, according to the *Warder*, the funds being raised in shares by leading members of the Dundee Chamber of Commerce. Competition designs were asked from several architects of repute. Of those sent in two were understood to divide approval equally, but it was deemed advisable to obtain a design from Mr. Bryce, of Edinburgh. This was accordingly done (after remunerating the authors of the designs referred to); and the plans of Mr. Bryce have now been carried into effect. The style of the building is that particular phase of Gothic which prevailed on the continent about the middle of the fifteenth century, as in the Hôtels de Ville, of Brussels, Louvain, Ghent, &c.: these Mr. Bryce has taken as the type of this Exchange. The main building abuts on Panmure-street, a wing containing the offices being thrown back at the west end, so as to form, with the end of the front building, two sides of a small square or place: it is in contemplation to finish by the erection of similar offices, at some future time, on the west side of this square. Seven tall windows light the hall. Over the cornice is a range of dormer windows. The tower is carried up one stage above the hall, and is of a very plain character, considering the work on the rest of the façade. It is terminated with a carved parapet and flat roof. The hall occupies the whole of the upper floor of the front building, its internal dimensions being about 77 feet by 34 feet. The timbers of the roof are ornamentally treated and open to the ridge. There are seven main couples springing off corbels halfway down the walls, with arches and purlins transversely and longitudinally springing from pendents. The roof timbers are painted dark oak, with the bolt-heads, pendeats, &c. gilded. The walls are painted a uniform stone colour.

Montrose.—The project for the erection of markets for garden and dairy produce, and a hall for the accommodation of 1,000 to 1,200 persons, has now been finally resolved on by the town-council, in consequence of an offer by Mr. Mitchell to relieve the council of the front site, and erect on it a building in continuation of his present erections, and by the exertions of the friends of the temperance movement, who, according to the local *Review*, are to make arrangement for erecting the contemplated public hall, at an expense of 900*l.* or 1,000*l.* with galleries, ante-rooms, &c. This hall would also serve the purpose of a corn exchange on Fridays. The markets will be put up by the council at a cost of 1,150*l.* These will have a spacious entrance from High-street for passengers, and a wide street passage from Baltic-street.

CHURCH-BUILDING NEWS.

Coggeshall.—The restoration of Coggeshall church, commenced in 1851, has been progressing, but much, it is stated, yet remains to be done. The nave and aisles, south chancel and tower, have been restored at a cost of 2,921*l.* 5s. 9d.; in addition to which, from private benevolence, the south porch door and font have been renovated. To complete the work, by restoring the north chancel aisle and entirely re-seating the church, 1,600*l.* are required.

East Grafton.—A memorial window has lately been placed in the church of St. Nicholas, East Grafton (by subscription of parishioners in the district), to the memory of the late Marquis of Ailesbury.

Doncaster.—Since the destruction of the parish church, rendering the opening of St. George's Chapel and the Townhall as places of Divine worship indispensable, the accommodation at Christ Church has been found inadequate. Hence it has been deemed advisable, says the local *Gazette*, to remove the vestries on each side of the communion-rails. This will give eight additional stalls, affording at the same time an improvement in internal arrangement. A new vestry is in course of erection on the north of the church, and in keeping with the exterior of the building. The work was let to the Messrs. Anelay, builders, and has been completed.

Loversall.—The church of Loversall has now been pretty fully restored. Exteriorly, the nave and south aisle have been replaced by new masonry, faced with Ancaster stone. The old windows have given place to cusped ones, filled with cathedral glass, and the terminations show figure carving. The north wall has been relieved of its unsightly buttresses. The south door has been covered externally with English oak and ornamental iron hinges, and panelled interior. Entering by the west door, the most prominent features are the stained-glass east window, and the raised roof of the nave resting upon open rafters. The former internal arrangement has been superseded by open stalls through the entire church. The screen which hid the interior from view on entering is cast aside, thus leaving the west door free from impediment, and converting it into the principal entrance. The flooring which came to the tower arch has been removed, bringing into prominence the west window, till now obstructed. The piers and arches separating the nave from the south aisle alone remain of the former structure. They are octagonal columns, with plain mouldings of the thirteenth century. The masonry above them has been replaced, but the columns are merely renovated. Excepting the chancel, the floor has been laid with Minton and Co.'s patent tiles. Entering by the south door, the memorial window of the Fenton family is prominent. It occupies the centre window of the north wall of the nave, and is of the Cusped or Pointed style, in lieu of the flat-headed and ill-shaped windows formerly occupying that side of the edifice. The chief subjects depicted are "Christ Healing the Dumb," and "The Last Supper." The relatives of the late Rev. Luke Willey have erected a mural monument near the Fenton window. Mr. Athron, of Doncaster, took the contract for the masonry work; Mr. Race, of Balby, for the woodwork; and Mr. Walker, of Doncaster, for the plumbing. Mr. Wailes, of Newcastle-upon-Tyne, is the designer and executor of the Fenton memorial; and Messrs. Anelay furnished the Willey tablet. The incumbent has contributed 150*l.* towards the repairs, and rather more than an equal amount has been subscribed by parishioners and friends. The cost, however, will probably be about 600*l.* A portion of the stone required for the repair has been presented by Mr. G. Savile Foljambe, of Osberton Hall, from his quarries at Warmsworth. Accommodation for about 150 persons is now afforded. The restoration has been completed under the direction of Mr. Scott.

Stockport.—The Tenders for the erection of the Cemetery Episcopal Chapel were examined on Saturday last. Several were sent in, but that of Messrs. J. and J. Longson, builders, for 690*l.* was accepted.

Ormiston.—The foundation-stone of a new church for the parish of Ormiston, in the south of Scotland, was laid on 28th ult. The church is erected by the Earl of Hopetoun, sole heritor of the parish.

THE LATE MR. JOSEPH NEELD, OF CHIPPENHAM.

At the last meeting of the Institute of Architects, Mr. James Thomson communicated the death of Mr. Joseph Neeld, M.P. who was an Honorary Fellow, and drew attention with justice to the improvements made by Mr. Neeld in the homes of his tenantry at Grittleton. Mr. Britton, in his "Autobiography," which is now fast approaching towards completion, gives some account of Grittleton and of its owner.

Speaking of the changes observable there since he first knew the neighbourhood, Mr. Britton says:—

"These important and commendable improvements have been gradually made within the last twenty-seven years, by Mr. Neeld, one of the members for the borough of Chippenham, who purchased the manorial estates of Grittleton from Colonel Houlton in 1828. Since that year he has bought other land in the same parish, with lands, manors, and advowsons in adjoining parishes, and thus created a domain of large extent, and placed the whole under one system of general amelioration and good cultivation. It is generally known that Mr. Neeld came into possession of great wealth on the demise of his maternal great-uncle, the late Philip Rundell, esq. of Ludgate-street, London, an eminent goldsmith, who died at the advanced age of 81, on the 17th February, 1827. After many munificent presents, during his long and money-saving life, he bequeathed, by will, the very large sum of five hundred thousand pounds and upwards to be distributed to his nephews and nieces, to personal friends, and to public charities. The residue of his fortune was given to his 'great nephew and esteemed friend, Joseph Neeld, esq. the younger.' This item was presumed to amount to at least eight hundred and ninety thousand pounds. The personal effects were sworn to exceed one million of money, the utmost limit to which the scale of probate duty extends."

A spacious mansion for Mr. Neeld, designed by Mr. Thomson, of which we gave a view some time since, is still in progress of erection, and was intended to receive a fine collection of works of art.

THE NEW WAR-OFFICE.

Sir Benjamin Hall proposes, and wisely too, to move, shortly, for the appointment of a select committee to consider the expediency of obtaining a site for the concentration of all the Government offices in the neighbourhood of Downing-street; and if that committee should be of opinion that this is an advisable course, and the House of Commons should sanction it, he would then, he says, be prepared to give notice in the autumn for the purpose of acquiring the property, by the introduction of a Bill. He proposes then to go still further, and says that as the buildings to be erected on that site would be of a grand and national character, the designs ought to be thrown open for public competition, not merely by the architects of the United Kingdom, but of the whole world, in order that we might have some public buildings at least which would be worthy of the metropolis.

Such is the present state of matters in respect to the Government offices; but, whatever be the result, the erection of a new War-office appears to be resolved upon, and, failing the more complete scheme, it may be erected in Pall-mall, on the site of Buckingham House and adjoining premises, between that and the Ordnance-office. Sir Benjamin also states that he is prepared to lay before Parliament a plan for taking the ground bounded by George-street, Downing-street, Parliament-street, and St. James's-park, but that this can only be obtained in the usual way, by notice being given in the autumn and the introduction of a Bill in

the spring. It is for their lordships of the War Department to say whether they can wait for their new office till the new site be purchased; and, any way, Sir Benjamin puts it as a question whether so large a department should be permanently fixed in Pall-mall, on a restricted site and so far from the other offices.

COMPETITIONS.

St. Aloysius's Schools, Ushaw, near Durham.—Some time since, Dr. Newsham, the president of Ushaw College, desired Messrs. Joseph and Charles Hansom, and Mr. E. W. Pugin, to send in competing drawings for a school to contain upwards of one hundred students: the latter gentleman was the successful competitor. The building is of a three-sided quadrangle form, the offices forming a quadrangle behind. The arrangements include chapel, study, class-rooms, dormitories, &c. The communication between the present college is effected by means of the museum (which is intended to be 160 feet in length), and a small cloister. An infirmary will be built between the old and new college, with direct and separate communication from each. This is complete in itself, independent of the rest of the establishment. The quantities have been taken out by Mr. Eyre, of Liverpool, and the plans are now in the hands of the contractors. The 12th inst. is the day appointed for the delivery of the tenders.

Grantham Cemetery.—About seventy designs from various architects were sent in. It appears that the choice has fallen upon a design by Mr. Browning, of Stamford.

Luton New National Schools.—The designs submitted were nineteen in number, and two were chosen for consideration, of which one bearing the motto "Fides" was finally selected. Mr. John Cumberland, of Luton, is the architect. The proposed buildings consist of a school for 300 boys and one for 250 infants, a residence for the master and another for the mistress, with proper offices to the schools and residences. The total cost is not to exceed 1,800*l*. Mr. Cumberland's design is estimated to come somewhat under that amount.

REFORMATORY AND INDUSTRIAL SCHOOLS.

The benevolent movement in favour of juvenile Reformatories and Industrial Schools is extending rapidly throughout the whole country, and new buildings are arising in various districts, in which to carry out the philanthropic objects of the movement.

The chief stone of the Warwickshire Reformatory Institution was laid by Lady Leigh, on Wednesday in week before last, near the village of Weston, on a site of 13 acres, which, with two other pieces of land, comprising in all about ninety acres, will be used for the purposes of the institution. The building will be erected under the superintendence of Mr. Hill, the county architect. It will be of brick, of the plainest possible character, and is to consist of a school-room, to be used as a chapel, and of dormitories, workshops, a residence for the master, domestic offices, cooking kitchen, wash-houses, &c. The site is on a hill, high and dry. It is said that Lady Leigh intends to form a committee to establish a Girls' Reformatory near Coventry.

The first stone of the Castle Howard Reformatory was laid on Monday in week before last by Lady Mary Labouchere, a sister of the Earl of Carlisle, on whose estate the building is to be erected. This institution, we understand, will be capable of receiving from forty to fifty boys, and the building committee hope to have it opened before the end of the year. They have, it is said, already made provisional arrangements for the care of thirteen juvenile offenders, nine of whom will be received into the buildings near Castle Howard, kindly placed by Lord Carlisle at the disposal of the committee for temporary occupation, and the remaining four, by agreement with Mr. T. B. L. Baker, the well-known and successful founder of the Reformatory School at Hardwick Court, Gloucestershire, will be sent to that institution.

At Manchester, on Wednesday week, a meeting of city magistrates, convened by a mayoral circular, was held, to consider the desirability of establishing Juvenile Reformatories in this district. In a discussion which took place, a strong sentiment seemed to be entertained generally, that there was a necessity for something being done, but that from the nature and magnitude of the evil to be dealt with, it could not be grappled with effectually by any voluntary effort, and that to be efficiently done it must be done by the State. It was resolved to urge upon Government and upon Parliament, the necessity of giving, by an Act to be passed during the present Session, the same facilities for the erection and maintenance of such institutions as now exist for the erection and maintenance of prisons. A committee, consisting of the mayor and other gentlemen, was appointed to take the requisite steps for furthering the objects of the meeting.

A proposal has been made by the magistrates of Salop to join those of Herefordshire, in the establishment of a Reformatory for juvenile offenders. The Herefordshire Bench, however, are not at present prepared to entertain the offer.

At Hull, on Wednesday in week before last, the chief stone of Ragged and Industrial Schools, was laid by the Earl of Shaftesbury, in the presence of a large concourse of spectators. The site of the building is a plot of ground, approaching a triangular shape, containing 1,650 square yards, situate between Marlborough-terrace and Norfolk-street. The master's residence will be on the western side of the ground, adjoining houses erected by Mr. Turpin, and will be separated from the school buildings by the road for the entrance of the girls, and the playground to be appropriated to their use. The playgrounds are separated by the schools and dormitories. The principal buildings, according to the *Hull Packet*, will comprise—on the ground-floor — industrial rooms, 28 feet by 29 feet; and 27 feet by 16 feet; committee room, 18 feet by 11¼ feet; kitchen and scullery, each 15 feet by 15 feet; boys' and girls' bath rooms, each 15 feet by 15 feet; and on the first floor, boys' school-room, 37 feet by 28 feet; girls' school-room, 25 feet by 28 feet; and boys' and girls' dormitories, 30¾ feet by 15 feet each; with all other necessary appurtenances. The upper school-rooms are capable of being thrown into one when occasion requires it, and can then be used as a "Ragged Church" for preaching, &c. The building will be in the style of the Tudor period, with stone dressings to the quoins, windows, and door openings, &c. There will be a bell turret; and provision is also made for a clock. The elementary schools will accommodate 150 children, and the industrial rooms about 100 additional pupils. The dormitories are constructed for twenty persons. The contracts for the new buildings are not yet let. The architect is Mr. William Botterill, of Hull.

RESTORATION OF THE ABBEY OF ST. ALBAN.

An influential and numerous meeting of the nobility, gentry, and clergy of Herts, was held at the Town-hall, St. Alban's, on Thursday in last week, "to consider the best means of restoring and upholding the Abbey Church of St. Alban's, and of obtaining for it the dignity of a cathedral." The chair was taken by the Earl of Verulam, and the meeting was addressed by the chairman, and by the Marquis of Salisbury, Lord Robert Grosvenor, Archdeacon Grant, Mr. Puller, Lord Robert Cecil, and other gentlemen, all of whom supported the object of the meeting: at the close, subscriptions to the extent of 4,205*l*. were announced. The *Herts Mercury* of last week gives a full report of the proceedings, and also of the report on the state and capabilities of the church, drawn up at the Lord Lieutenant's request by Mr. G. G. Scott, architect. The report states that the plan of the church being substantially like that of most of our cathedrals, there can be no reason why it should not be as well suited to its purpose as they, but that the reporter would wish to see it much more so, and thinks this also can be effected; but, executed on a scale becoming the dignity of the church, the cost of rendering it fit for cathedral uses would, in his opinion, come to from 12,000*l*. to 13,000*l*.; besides which other works are suggested, which would cost about 5,000*l*. or 5,500*l*. In respect to the first or most essential order of alterations, the reporter says: "The refittings would consist of a new altar-table of suitable design, with proper coverings and appurtenances; an episcopal throne of becoming dignity; canopied stalls for the dean, sub-dean, and chapter, with desks and subsellæ in front and all requisite provision for the vicars choral and choristers; a low choir screen of open metal-work across the eastern arch of the tower, and all the minor requirements of choral arrangement; a new organ, so placed and constructed as to be an ornament rather than an obstruction, and conveniently arranged both for the choir and the congregation; and a handsome new pulpit (perhaps of Purbeck marble); and oak seats throughout the part to be occupied by the congregation, with requisite screens to sever this from the parts not so used. All these should be executed in a style proportioned to the magnificence of the building, their details perhaps agreeing in character with the style of the choir itself. The pavements of all these portions should be proportioned in richness to their position; but in no case interfere with any ancient sepulchral stones, which must be carefully preserved *in situ*."

The repairs immediately connected with these alterations must be considerable and of the most delicate character, every touch being thoroughly considered, and of these Mr. Scott gives some slight details by way of example, particularly as relates to the projecting pilasters of the Norman piers, and to questions of decoration. Spacious vestries also would require to be erected for the chapter and choir on the site of the ancient vestries. The second-class of works recommended comprises the general restoration of the interior of the choir, the complete repair of the aisle roofs of the nave and other roofs, and of the foundations, particularly of the nave aisles, drainage of the edifice, and other works. A third-class of restorations is also slightly indicated, but "no attempt should be made to *smarten* up the old Norman structure." Dr. Nicholson is of course exerting himself on the subject.

METROPOLITAN BOARD OF WORKS.

A special meeting of this Board was held on 4th inst. when Mr. Bazalgette read his report on the sewage interception and main drainage of the districts south of the Thames. As to the merits of the scheme, we shall be better able to judge when the report is printed, as it has been ordered to be. Meantime, we may quote the following preliminary remarks, and also a paragraph as to the estimated cost of the various works:—"The Board will probably remember that in 1853, pursuant to directions by the then Metropolitan Commissioners of Sewers, designs for intercepting sewers on the south side of the river were prepared by me. The plan now submitted for your consideration will be found to resemble in its main features the former scheme: it therefore becomes necessary to recapitulate several of the leading considerations referred to in my report of 1853, and in the joint report by Mr. Haywood and myself upon the northern drainage in 1854, whilst I have at the same time endeavoured to take advantage of all the information gained in the subsequent preparation of the northern drainage scheme, and to profit by the experience of the last three years. The modifications now introduced will, I trust, be regarded by you as improvements.

The estimated cost of the works herein recommended will be as follows:—

ESTIMATE.

High level sewer, from Clapham to Deptford, and branch	£199,226
Extension from Deptford to Plumstead...	155,550
Low level sewer, from Putney to Deptford, and branch	209,000
Reservoir and land for pumping stations	103,140
Engine-houses, engines, pumps, &c.	164,780
	£831,696"

Having resolved that the report be received, and printed as soon as possible, the Board proceeded to other business, amongst which was a communication signed "Lionel Gisborne," accompanying plans and papers, on the Thames embankment (from London-bridge to Westminster-bridge, it was alleged), to which the chairman said Mr. Bazalgette and he attached some importance, and which was referred to the works committee by a large majority. It was then resolved, "That it be referred to the Improvement Committee to consider and report to this Board whether any alteration ought to be made in the level between Holborn-hill and Skinner-street, before the corporation commence letting their vacant ground on building leases, it being apparent, from the state of forwardness of Victoria-street, that no time should be lost in coming to a decision on this long-needed improvement."

ROCHESTER NEW BRIDGE.

It is expected that the new bridge at Rochester will be opened in June next; and it it intended that the demolition of the old one shall be commenced on the day of opening. The design of the new bridge, as we have before noted, is by Sir William Cubitt. It is to stand directly in a line with the high streets of the two towns. The main bridge is of cast-iron, measuring in length about 485 feet by 40 feet wide, and is composed of three arches, namely, two side arches of 140 feet span each, and one centre one of 170 feet span; the rise on the raised side of the former being 14 feet and the latter 17 feet. Each arch consists of eight main ribs, which in the smaller arches are cast in five pieces, and in the larger one in six. The ends of all these castings are planed by machinery made expressly for the purpose. The spandrils of the arches are fitted in with ornamental cast-iron work, which serves to carry the covering-plates of the roadway. The whole is surmounted by a heavy moulded cast-iron cornice and parapet railing, the former intersected with the moulded stonework of the piers and abutments. The roadway and footpaths are carried entirely by cast-iron

plates, bolted to the tops of the spandril castings. These plates are overlaid with planking, upon which granite pitching is placed. This superstructure has been contracted for by Messrs. Cochrane and Co. of Woodside, near Dudley. The total weight of cast iron is 2,500 tons, and about two-thirds is already fixed in the place. The foundations upon which the superstructure is being erected have been completed by other contractors. They are formed of cast-iron hollow cylinders, sunk through the bed of the river on to the rock, filled with concrete and brickwork, and bound together by cast-iron curtain-plate and covering-plates, on which the masonry of the piers and abutments is placed. The centre arch is still at Woodside, together with the skeleton of a swing-bridge, with a clear opening of 50 feet, and forming a fourth arch of the Rochester-bridge. This bridge consists of six wrought girders, carried by and turning upon a cast-iron roller-path, 30 feet in diameter, and thirty cast-iron rollers. The gearing is so arranged that a very small force will be required to open and close the bridge, although its total weight with roadway complete will exceed 300 tons. The whole of the works of the bridge have, since their commencement, been under the superintendence of Mr. John Wright, the resident engineer.

ARCHITECTS AND CORPORATE BODIES.

I VENTURE to draw the attention of architects and builders to the following facts, in the hope that in dealing with municipal corporations they will take care that their contracts are sealed with the corporate seal, otherwise they may find that the law provides them no remedy for recovering amounts due to them.

In the year 1854, in consequence of an advertisement for plans, sections, elevations, and estimates for a new town-hall and other buildings in the borough of Preston, I became a competitor for the same, and obtained the first premium of 100 guineas, mine being deemed the best plans. The plans became the property of the council, but they were considered too expensive, and the building committee decided upon postponing the building and having a less expensive plan.

Subsequently, by letter from the town clerk of Preston (which embodied resolutions passed at a meeting of the council on the 2nd October, 1854), I was requested to prepare a design for the erection of buildings at an expense of about 16,000*l.* In consequence of this letter, and of instructions from the building committee as to the mode of carrying the resolutions into effect, I incurred considerable expense in preparing working drawings and specifications, and by taking journeys to attend committees in Preston, on request almost invariably by letter from the town-clerk, as well as journeys to London to consult Mr. Barrett in reference to fire-proof floors, and to give him the requisite information to enable him to prepare his specifications.

I subsequently furnished the committee with a design, and a statement containing several estimates. On the 2nd of January, 1855, I received a letter from the town clerk, stating that the council had determined to carry out my plan No. 1, so far as some old buildings were concerned, the cost of which I had estimated at 9,500*l.*; and afterwards I was requested to meet the building committee, and in the meantime to inform the town clerk what my rate of charges would be for carrying out the work. I accordingly informed the town clerk what my charges would be. The council on the 16th January, 1855, decided upon additional buildings, which increased the cost to 12,000*l.*; and afterwards the building committee gave me instructions for constructing the whole of the floors fireproof, and for putting in plate-glass windows, iron shutters, warming and ventilating apparatus, and certain fixtures and gas apparatus; thereby increasing the cost very considerably.

In accordance with the instructions of the building committee, I prepared the whole of the plans, sections, and drawings, and quantities of the different works. The total amount at which I estimated the works (with the extras) could be completed, was 16,151*l.* The total amount at which they were contracted for was 15,536*l.* Being less than my estimate by the sum of 615*l.*

On the ground that the estimates were so much more than the council expected, they subsequently declined to proceed with the erection of the buildings. I believe that the reason the council complained of the expense was, that the building committee never explained to the council that they had requested me to make any extras, such as fireproof floors, &c. which were, of course, very serious items of expense.

I afterwards sent in my bill for the work I had performed, and as the corporation declined to pay it, I commenced an action to recover the amount. In that action the corporation pleaded that they had never bound themselves to perform the agreements by any contract under seal. There being, therefore, no contract under seal, I was advised that the corporation could not be compelled to pay me the amount of my bill. In consequence of this *legal* difficulty I was induced to accept from the corporation the sum of 330*l.* in discharge of my claim of 875*l.* 10s. 3d. Had I persisted in going on with the action, the result would, no doubt, have been, that I should have been nonsuited, or, in other words, that I had no ground of action, simply because the agreement being with a corporate body was not under seal. After this I might, indeed, have gone to a Court of Error, where, to say the best, it was very doubtful whether the doctrine that corporate bodies can contract under *seal only*, would not have been upheld. Had I adopted this course, the expense would have been enormous; and you therefore cannot wonder that, with almost the certainty of losing the trial, and consequently of having very large costs to pay, I was induced to accept a sum of money, which, after deducting interest on the amount laid out by me, and the costs which I had incurred, did not cover the amount I had actually expended on behalf of the corporation. The offer to compromise the action proceeded from the corporation, and not from myself; and this, in my opinion, affords strong testimony that the corporation considered that I was in justice entitled to remuneration. If my services had been rendered to an individual instead of to a corporate body, no doubt the law would have enabled me to recover the whole of my charges; and it appears to me a great violation of right that in such a case there should be any distinction between individuals and corporate bodies.

In future I shall of course take care not to lose the power of enforcing my just claims by inattention to legal technicalities; and I hope that your readers may also be warned from the difficulty into which I have fallen.

WILLIAM HILL, Architect.

IRON CHURCHES.

AT committee meetings of the Ecclesiological Society, held on March 11th and 12th, 1856, at Arklow House, Mr. Beresford Hope in the chair, Mr. Slater, in presenting the finished engravings of the plates for the concluding number of the *Instrumenta Ecclesiastica*, informed the committee, that in compliance with their request he had obtained an estimate by Messrs. Skidmore, for executing the designs in wrought and cast iron; and one from Messrs. Troughton and Bevan, for executing them in cast iron;—the first, 2,500*l.*; the second, 2,150*l.* Messrs. Skidmore further said, "We will undertake to make a church capable of holding 800, with enrichment equal to a church costing in stone 7,000*l.* for one-third less than this amount. If iron is to be considered a material of our age and locality, and to be used as our forefathers used every material of their day, giving it its natural expression, adding art and beauty to the constructive form, it would be unlike their actions, and unworthy of ourselves, to use a new (for considering the facility of its production in this day, and its great and extending use, it may fairly be ranked as a new) material, only as a cheap expedient, instead of giving to it that development in Christian art, of which it is so capable. In furtherance of these views, we would suggest the use of geometrical forms of iron (the constructive supports of the walls), filled in with marble of various colours: as also carving or ceramic art for the same purpose. The interior would afford ample scope for carrying out that floral treatment so much used in the fourteenth century. The iron also would require coating with pigments to preserve its surface, and would form a ready means of illumination; the renewed use of crystals and gems, as in ancient metal work; the use of enamels, which present facilities would permit to a greater extent, even than in ancient work; the covering wall-surfaces with tapestry, having historical subjects, reredos of brass, or silver and brass combined,—are also objects to be aimed at."

THE FITZROY DRY DOCK AT PORT JACKSON, NEW SOUTH WALES.

THE graving establishments of Port Jackson consist of the Waterview Dry Dock and the Australasian Steam Navigation Company's Patent Slip, both for some time finished and open, and the Fitzroy Dry Dock, which is rapidly approaching to completion. The Fitzroy Dry Dock is situated on the south-east of Cockatoo Island, to the westward of the harbour of Sydney, at the commencement of the Parramatta river. The basin of the dock has been excavated out of compact sandstone and hard shale. The original surface of the island at the point selected for this work had 40 feet of sandstone above high-water mark, which had first to be cleared away: 3,000,000 cubic feet, or 200,000 tons, of stone have thus been removed. A considerable portion has been cut and employed to line the lower portion of the dock, which is excavated out of hard shale. The floor of the dock is formed of massive blocks of stone, each three to six tons in weight. They are so cut as to form an inverted arch of 72 feet radius. The altar stones, or steps along the sides of the dock, are of the same massive description; each stone forming two steps, of a foot tread. The piers between which the caisson rests have two sills, 20 feet apart, to which are bolted, with 1½ inch copper bolts, the timbers, 12 by 12, to form a surface against which the caisson presses when the water is pumped out of the dock,—the pressure caused by the water outside being calculated to be equal to about 400 tons distributed over the surface. The *Sydney Morning Herald* gives the following comparison of the dimensions of the Fitzroy Dock with those of the new "South Inlet" Dock at Portsmouth, together with the cost of each:—

	South Inlet Gov. Dock, Portsmouth.			Fitzroy Gov. Dock, Sydney.	
	Ft.	in.		Ft.	in.
Extreme length	335	0	...	336	0
Length of the floor	302	0	...	300	0
Extreme breadth	80	9	...	79	0
Extreme depth	29	0	...	27	0
Depth of water at spring tides	23	0	...	21	9
Width at entrance	70	0	...	60	0

The South Inlet was completed in ten years at a cost of 120,000*l.* "The Fitzroy," adds the *Herald*, "will have taken about eight years when finished, at a cost to the colony of say 55,000*l.*; although the real value of the work which has been done up to the present time has been (after careful allowance for the difference between forced and free labour) estimated at 100,000*l.*" Capt. K. Gother Mann and Mr. James Henry Thomas (the latter officer, brother of Mr. Cave Thomas, the artist, having prepared the designs for the whole of the extensive plant of machinery, and for the additional buildings, &c. now in course of completion) are carrying out this important work by help of forced labour, in most respects of the worst kind.

Notices of Books.

On Agricultural Chemistry, and the Nature and Properties of Peruvian Guano. By J. C. NESBIT, F.G.S. &c. Fourth edition. London: Longman and Co.

IT should be unnecessary now to urge the importance of applying science to agriculture, and promoting that great development of its products, the foundations of which are now being laid by engineers, chemists, and other men of science. The fourth edition of a work on agricultural chemistry, by the principal of the Agricultural and Chemical College, Kennington, carries its own recommendation on the face of it. The volume is composed of lectures delivered at various farmers' clubs and agricultural meetings during the last few years, and its main object is to render more familiar and popular the science of agricultural chemistry, and to divest it as much as possible of dry details and technicalities. A farmer is a manufacturer, and must study processes.

Miscellanea Graphica: a Collection of Ancient Mediæval and Renaissance Remains in the possession of Lord Londesborough. Illustrated by FREDERICK W. FAIRHOLT, F. S. A. London: Chapman and Hall, Piccadilly.

THE many valuable and rare antiquities in the collections to which Lord and Lady Londesborough have devoted no small amount of money and care, are being elegantly illustrated by the careful pencil of Mr. Fairholt. Amongst the Nos. of the "Miscellanea Graphica" now before us are a great variety of curiosities, such as bells, drinking-cups, altar furniture, ivory carvings, bronzes, jewelry, enamelled plaques, watches, warlike instruments and armour, implements of punishment, gold ornaments, stirrups, &c. &c. Many of the illustrations are illuminated in gold and colours, such as a morse of fourteenth century, two plaques of thirteenth century, altar furniture, Merovingian and other ornaments, &c. Perhaps one of the most interesting of the objects illustrated in the few Nos. referred to is the Bell of St. Mura. This curious relic is engraved the full size of the original. It is remarkable as a work of art, as well as for its venerable antiquity and the superstitious regard in which it has long been held by the Irish. Its legendary history narrates how it came down from heaven, ringing all the way, and how the tongue re-

turned to the skies. It never was used, therefore, as a bell, so far as tradition indicates, but was turned into a medicinal drinking-cup. For centuries the famous abbey of Fahan, near Innishowen (county Donegal), was noted as its depositary. The material of this little bell is bronze, and its form is quadrangular, like other Irish bells of the seventh century. It is ornamentally encased; but by the accidental removal of one portion of the outer casing, a series of earlier enrichments were discovered beneath, and probably of ninth century workmanship. The portion disclosed consists of a tracery of Runic knots, wrought in brass, and firmly attached to the bell by a thin plate of gold. The exterior ornaments consist of a series of detached silver plates of various sizes, diversely embossed in a style of the eleventh century. The centre is adorned with a large crystal, and smaller gems have at one time been set in other vacant sockets round it; only one, of amber, remaining. The gold setting of other stones also appears on it. The best workmanship has been devoted to these decorations. The illustrations in this valuable and interesting work are interspersed with descriptive letterpress. The whole work is in the quarto form.

VARIORUM.

In "A Plan for the better Management of Railroads," by Mr. F. Chaplin, published by Effingham Wilson, of the Royal Exchange, London, some wholesome advice is offered to railway directors on the true nature of their *premises*, as simply those of great carriers and trading companies. The author, however, is of opinion that railways will never *pay*, nor will they ever be fairly tried, till they come under the management of "men who, at least in their corporate capacity, have nothing else to do."——A third edition of Quested's "Art of Land Surveying, explained by short and easy Rules, particularly adapted for the use of Schools, and so arranged as to be also useful to Farmers, Stewards, and Others," has been issued by Relfe, Brothers, of 150, Aldersgate-street, London. As before noted, this is a good little book of its kind.——A sixpenny pamphlet has been published by Johnson, of St. Martin's-lane, Charing-cross, the title of which will sufficiently explain its objects. It is titled, "A few Lines to Railway Companies and the Public, suggesting a Plan for the better Management of Railway Trains, and on the Means of communicating between Guards and Engine-drivers for the prevention of Accidents, containing a Description of a new Air-whistle, and of a simple Plan to indicate to Engine-drivers the accidental Separation of a Portion of a Train, carrying out a Suggestion in Captain Galton's Report on Railway Accidents, 1855." Flags and whistles have been over and over again suggested for the purposes indicated.——Messrs. Longman and Co. have issued a shilling pamphlet, giving a description of "the Globotype Telegraph, a recording instrument, by which small coloured balls are released, one by one, and made to pass over a series of inclined planes by the force of their own gravity." The inventor is Mr. D. M'Callum, of Stonehouse, Devon. He purposes the substitution of these recording balls for the needle which does not record, and states that the working of his instrument can be learned by a boy in half a minute, that the glass balls are practically everlasting, that no paper and pencils are requisite, no uncertain movements of needles to be watched, and no clock-work to be wound up, for recording messages, and yet that they *are* recorded in visible, tangible characters, which any one may read.——"The Half-holiday Question considered, with some Thoughts on the Instructive and Healthful Recreations of the Industrial Classes," is the title of a sixpenny pamphlet by Mr. John Lilwall, the honorary secretary of the Early Closing Association (Kent, Paternoster-row, and others) in which the author offers various suggestions with reference to the very desirable object of converting Saturday into a half-holiday, or rather of restoring it as such, for in former days the Saturday afternoon was a very general half-holiday both with young and old, as it ought still to be. Gymnastics, concerts, and various other recreations are among the holiday pastimes suggested, not for behoof of the poorer orders of work-people alone, but of employers as well as employed, and, indeed, of the great body of the industrial classes.

Miscellanea.

Gun-wadding for the Stage.—We have had various communications on this subject since our last, but the subject is not one for *us* to enlarge much farther on. There are two of these communications, however, to which we must allude. Mr. T. E. Dunn suggests wads cut from woven or compressed Asbestos, and remarks of very thin metallic gun-wadding, that it would be liable to melt, and adhere to the interior of the barrel. Mr. Wentworth L. Scott informs us that he finds by experiment that thin metallic gun-wadding not only melts, but is even apt to ignite combustible matter, such as touch-paper, when fired, and that he has prepared two kinds of wadding, one which will not easily take fire, and the other so highly combustible that it is entirely consumed in its passage along the gun-barrel. The latter of these he has found to be the most effectual. The idea is both an original and a good one. Continued practice, our correspondent says, has showed the impossibility of igniting a combustible target even at 5 feet with this wadding.

Californian Trees.—A gentleman travelling in California and adjacent parts, sends an account to an American paper of an extraordinary grove of trees, growing at an elevation of 4,500 feet above the level of the sea. This Mammoth Tree Grove, as it is called, contains in its valley eighty-five monster trees, in an area of fifty acres. On the body of the "Big Tree" there is a house 14 feet by 80 feet, which contains two fine alley bowling-alleys. The stump of the tree is intended for a ball room! I measured the stump myself at a distance of 8 feet from the ground, and found it to be 26 feet in diameter at the narrowest place. This tree is not the largest tree in the grove, but it is the largest perfect one. It is 95 feet in circumference, and measured, after it was cut down, 300 feet in length, the stump standing 8 feet high. It is estimated by the grains of the stump to be 3,000 years old. Five men were occupied twenty-five days in felling it (which was done by boring), and three weeks to strip off its bark to the height of 52 feet. The "Miner's Cabin" is 80 feet in circumference, and nearly 300 feet high: it is open in front about 17 feet. The "Husband and Wife" are about 250 feet high, and each 60 feet in circumference. They seem very affectionate, leaning toward each other at the top. The "Family Group" consists of twenty-six trees, the father, mother, and twenty-four children. The father, from appearance, was blown down many years ago. This tree measures 110 feet in circumference, and the supposed height while standing was 450 feet: the remaining length where it was broken off by falling against another tree, is 300 feet. It is hollow the entire length, and large enough to ride into on horseback! The "Hercules" is 350 feet high and 107 feet in circumference: this is the largest standing tree in the grove, and would make 725,000 feet of lumber. It, like many other large trees is imperfect, being burned on one side 8 feet. The "Horseback Ride" is an old fallen hollow trunk of 250 feet in length: it is separated into two parts. The space ridden through is 75 feet in length, and 12 feet diameter in the clear. It is the intention of the proprietors of this grove to make it one of the most agreeable summer resorts to be found in the State, and from the manner in which they have commenced, adds the traveller, I have no doubt that all who visit the place will find their words true. A specimen of these mammoth trees is now in London, at the Philharmonic Rooms, Regent-street.

The Nicholson Memorial at Carlisle.—The first practical step towards the completion of the monument intended to be erected to the memory of the late Mr. Peter Nicholson, was taken on Monday before last, when the foundation-stone was laid at the Cemetery, in presence of the committee appointed by the subscribers to carry out the details of the work, and of other friends and admirers of the late Mr. Nicholson. The site selected is nearly mid-way between the two new chapels, and is one of the most elevated portions of the cemetery. The monument itself is to be a triangular column of 35 feet in height, built of freestone, with ornamental mouldings; one side of the base representing a joiner's square, a compass, and a plummet line—symbolical emblems of the profession of the deceased. It is from a design by Mr. Billings, and is in course of erection by Mr. Carruthers, of Carlisle, marble-mason. The ceremony of laying the stone was performed by Mr. Robert Cowen, chairman of the committee, who afterwards gave an outline of the career of the late Mr. Nicholson, reported at length, with other proceedings, in the *Carlisle Journal* of last week.

Assyrian Antiquities.—A whole ship's cargo of Assyrian sculpture has just been received at the British Museum, and will shortly be exhibited. This sculpture is of somewhat later date than that already in England, and shows a decided advance in art. Some animals are very beautifully represented, and there are some new and graceful examples of ornamentation. The archæologist will be surprised to see some well-defined, lancet-shaped arches, and other architectural details of interest.

The Museum of Science and Art at Brompton.—The iron structure now in course of erection on the land of the Royal Commissioners, between the Kensington-road and Old Brompton-road, is beginning to make a show. We reserve particulars until it is a little more advanced.

Camberwell new Cemetery.—The contractor denies the imputation sought to be fixed by the correspondent whose statement we refused to insert last week; and refers to the architect to the cemetery, under whose certificates of conformity to the contract the various sums of money have been paid to him.

The Painters' Strike in Glasgow.—This strike is at an end—a compromise having been effected. The men relaxed in their demands, and the masters consented to a certain advance in the rate of wages.

Sir Charles Eastlake and the Paul Veronese.—On the vote of 17,639*l.* being moved for the expenses of the National Gallery, various members of the Commons proceeded to abuse Sir Charles Eastlake and Mr. Otto Mündler in strong set terms for purchasing, or at least paying so much for, "The Adoration of the Magi," by Paul Veronese; and a formidable array of newspapers, journals, magazines, and reviews, were quoted or referred to in support of the view taken. Several communications were forwarded to ourselves, but we refrained from printing them, because we really have some confidence in Sir Charles Eastlake, and would not set our own opinions as to the soundness of such communications in competition with his, at all events considering the implied object of displacing him from his office. An amendment that the vote be reduced by 650*l.* the item for travelling expenses, was rejected by a majority of 152 to 72, and the vote then agreed to.

The Clapham Athenæum.—On the 27th ult. Mr. James Hopgood, as vice-president of this thriving institution, received the members and many friends at his residence, Clapham-common, where he had gathered together numerous objects of interest for their amusement, and catered hospitably.

Artists' and Amateurs' Conversazione.—The last *conversazione* will be held on Thursday, the 17th instant, at Willis's rooms, St. James's, when a good exhibition of works is expected. The preceding meetings have been very interesting.

The Public Education Department.—This establishment has been revised recently, but the increase is only apparent. Additional clerks have been added to the staff in lieu of clerks hired from Messrs. Vachers. The London establishment now consists of a secretary with a salary of 1,200*l.*; two assistant secretaries, 1,800*l.*; eight examiners, aggregate salaries, 2,605*l.*; five clerks, aggregate salaries, 923*l.*; thirty-four assistant clerks, at salaries from 80*l.* to 250*l.*; an advising counsel, 360*l.*; an architect, 400*l.*; forty-one inspectors, at salaries from 200*l.* to 600*l.* and with allowances for personal expenses and cost of travelling.—*Civil Service Gazette.*

St. Martin's-in-the-Fields Reading-room for the Working Classes.—On the evening of the 8th instant Viscount Ingestre gave a lecture on "Travels in the United States, Cuba, and Mexico," which his lordship had visited in 1853. The lecture was calculated to afford much instruction to its hearers, and from the pleasant tone and manner in which it was delivered, much amusement also. At the conclusion a vote of thanks was proposed by a working man, and duly acknowledged by the lecturer, who expressed his warm interest in the success of such institutions as that which he had that night attended.

The Regent-circus.—A correspondent suggests that "Regent-circus North," in Oxford-street, should be called "Oxford-circus." Some alteration is certainly very desirable.

Annual Votes for Public Works, &c.—In committee of supply the following amongst other sums have been voted:—For palaces, parks, and public buildings, 195,000*l.* For the general management of the department of science and art and the schools in connection with the geological department, 64,635*l.* For the Board of Public Works, 22,500*l.* Towards expenses of New Houses of Parliament, 83,680*l.* Towards cost of harbour of refuge at Holyhead, 207,305*l.* (a further sum of 265,000*l.* required), Towards harbours of refuge generally, 233,000*l.* For expenses at Port Patrick harbour, 384,000*l.* Expenses of Department of Public Works in Ireland, 41,221*l.*

THE COPPER TRADE.—The produce of copper ore sales by public ticketing, for the four quarters ending March, 1856, amount to,—Cornwall and Devon, 203,277 tons, realizing 1,293,972*l.* 1s.; Swansea—Foreign and Irish, 49,364 tons, realizing 746,748*l.* 16s. 6d.—Total, 252,641 tons, 2,040,720*l.* 17s. 6d.—a sum considerably beyond that of many preceding years, and accounted for by the unprecedented demand for the metal, and the unusually buoyant market price, which has been kept almost stationary for nearly four years.

GAS.—At the half-yearly meeting of the Lincoln Gas Company, the usual dividend of 10 per cent. was declared, and the progress made in improving the works was said to be satisfactory. ——An advertisement of the United Bristol Company announces a reduction in the price of gas to 4s. per 1,000 cubic feet—to take effect from the 1st of January last.—— At the third general annual meeting of the shareholders of the Southwell Gas Light and Coke Company, a dividend of five per cent. (free from income tax) was declared.

THE CAMBRIDGE LUNATIC ASYLUM.—At the Cambridge Sessions the other day, the Committee of Visitors reported that the tenders for the erection of the proposed lunatic asylum, including lodge and farm buildings, were as follow:—Mr. Wm. Higgs, Westminster, 44,082*l.*; Mr. Wm. Hill, Whitechapel, 40,491*l.*; Messrs. Marriot and Taylor, Coventry, 39,975*l.*; Messrs. C. C. and A. Dennett, Nottingham, 39,530*l.*; Mr. Wm. Webster, Wyberton, Boston, 34,619*l.* The tender of Mr. Webster was accepted by the committee for the sum of 34,619*l.* which was to include every expense; but at a subsequent meeting of the committee it was satisfactorily explained that certain items had been omitted from his tender to the amount of 2,699*l.* and the committee, considering that, with the addition of the above sum, Mr. Webster's tender would still be the lowest, and also be within the estimate, deemed it advisable to add such sum of 2,699*l.* to the original tender, thereby increasing it to the sum of 37,318*l.* The committee reported the result of proceedings taken by Messrs. Kendall and Co. already referred to in our pages. In order to prevent further proceedings, the committee directed the clerk to pay the amount of the judgment and plaintiffs' costs, and the same, which amounted to 1,029*l.* 14s. had been paid. It was further reported that Mr. Percy, the surveyor who took out the quantities under Messrs. Kendall and Co.'s plan, had offered to take the sum of 450*l.* in full discharge of his claim; and the visitors, in order to prevent litigation, had directed that sum to be paid. It appeared that the law-suit had cost them 2,400*l.*!

ANCIENT REMAINS IN THE CRIMEA.—On Thursday evening week Lieutenant-colonel Munro delivered a lecture at the Bristol Philosophical Institution on the subject of the remains of an ancient building, supposed to be a temple, discovered near the British head-quarters in the Crimea. It was an oblong walled enclosure, measuring 150 feet by 93 feet, and it had at one end a circular form. Its walls, which were 10 feet in thickness, comprised a cyclopean wall and an inner wrought wall. After some days they found a well, having on its walls traces of some painting, which was not sufficiently perfect to be made out. They then came to a stone having grooves in it, as if for a liquid to run off, and which he felt satisfied had been a sacrificial stone. They also found sixteen vessels, all having different capitals, and in all of which were different descriptions of soil, a few bones, and some charcoal. The gallant colonel then proceeded to discuss the probable date of the temple, which he himself believed might have been dedicated to Diana, and whose date he ascribed, from the coins and other evidences, to from 350 to 450 B.C. He exhibited grotesque fragments of incense vessels, iron remains of spear tops, and other matters, and also an exceedingly graceful Grecian female head in terra cotta, which Mr. Hawkins, of the British Museum, and others who had seen it, had pronounced to be one of the most beautiful specimens of ancient Grecian art in Europe, if not in the world.

LEITH DRAINAGE: ARCHÆOLOGICAL DISCOVERY.—The drainage contractor, in "Timber Bush," last week, came on a strong piece of masonry, conjectured to be part of the old fortified wall of Leith. It is 18 feet thick. On cutting it through there has been discovered a passage running along, near the centre of the wall, 2 feet 10 inches broad, and 6 feet 2 inches in depth. Should this passage continue along the whole of the old wall—which runs in a direction from Assembly-street to abont the Bush Entry—and be found entire, it may be used for drainage, saving several hundred pounds.

ART IN MANCHESTER.—A proposal is before the public in Manchester for a grand International Exhibition of pictures, sculptures, glass, engravings, and other works of art. The scheme includes the erection of a Crystal Palace and a world-wide agency. The means proposed are a large guarantee fund.

THE PLYMOUTH ROYAL HOTEL AND ITS ARCHITECT.—At a recent dinner in the Royal Hotel, the Mayor, Mr. Kelly, who presided, in one of the speeches which he made on the occasion, as an illustration of the contracted views of the corporation of the days when the Royal Hotel was built, referred to a story current to the effect that some gentlemen connected with that corporation, in returning from a social party one evening, had removed the stakes which had been placed to mark out the line of building on the George's-place side some distance backwards, and that to that circumstance was due the width of the space between the porticoes of the hotel and George's-place! This was reported in the newspapers, and so came under the notice of Mrs. Foulston, the widow of the late Mr. John Foulston, the architect by whom the hotel and theatre, and many other public buildings in that neighbourhood, were designed. Mrs. Foulston, regarding the absurd story as detrimental to her husband's reputation for taste and judgment, has published a letter denying its truth. Mrs. Foulston farther writes:—"The weight of iron in that theatre is immense. It was so constructed as to render it secure from fire; and how necessary such a precaution is in building theatres, the events of the last fifty years fully prove; during which period almost every theatre in London, and many in the country, have been burnt down once, if not twice, and what a large sum of money it has saved the corporation in insurance, and for which Mr. Foulston never received thanks in his lifetime, or a monument afterwards, though he has certainly been a real benefactor to Plymouth. I feel assured that the few who are now living, and who can remember Plymouth forty-five years ago, will readily admit that the town is much indebted to the refined and architectural taste of my lamented husband."

NOTES AND QUERIES.—1. What would be the expense of fitting up a slate bath in all dwelling and lodging-houses? 2. Why are our barracks without baths and washhouses? and of (what is of far more importance) a gymnastic ground, like the one at the Cadet's College, at Woolwich.—N.B. The French showed themselves more agile and nimble in the Crimea than our soldiers, owing, no doubt, to the early, constant, and steady training of gymnastics in that country.—J. B. N.

COMMERCIAL VALUE OF GAS REFUSE. — The "Journal of Gas Lighting" says,—Nothing, perhaps, is more remarkable in the history of gas lighting than the amazingly small advantage which this art has hitherto derived from the resources of practical chemistry. In the application of mechanics, and in the expositions of science, there have been, indeed, no lack of inventors and instructors; but, nevertheless, if we look anywhere in our gas establishments for the methodical employment of that routine of operations by which, in the chemical arts, a profit is drawn from mere waste refuse, we shall look in vain. In this respect, matters remain as they were in the earlier eras of Murdoch, Watt, Clegg, and Lowe: then, as now, the only saleable products from a gas-work consisted of coke, gas, tar, and liquor. We will not enter into an analysis of the circumstances which may have retarded the development of this particular industry, though, no doubt, much of it has been due to the benumbing agency of what are called "patents," but which ought, in reality, to be called "pretensions." It is enough, however, that at the present moment there is nothing either of the one or the other kind which stands in the way of a gas company sincerely desirous of carrying the manufacture of gas ont to that economical point at which the greatest amount of profit is obtained at the least cost. If we admit a large outlay for labour, wear and tear, investment of capital, &c. there is, nevertheless, an obvious and certain source of profit, sufficient to make a perceptible difference in the dividend of our metropolitan companies, and fully justify us in the assertion, that practical chemistry has not yet fulfilled its task towards this important branch of industry.

ARCHITECTURAL MUSEUM.—The prizes for carving were presented on Monday last, but we must postpone notice of the meeting.

MAJOLICA WARE.—This ware is named from the fact that painted pottery first came into Italy through the expedition against Majorca, in the twelfth century, when Moorish pottery formed part of the spoils. What we now know as Majolica ware proper belongs mainly to the fifteenth and sixteenth centuries. The earlier specimens of it are called Mezza-Majolica. Majolica is sometimes termed Raffaelle ware, but improperly so: Raffaelle may have painted some of these pieces with his own hands, and his compositions are found upon many of them; still, the best works in this manufacture were not produced till after the death of Raffaelle. The Bernal Collection, dispersed in 1855, contained about 400 pieces of Majolica ware, which cost Mr. Bernal less than 1,000*l.* but realised at the sale 7,000*l.*—*From Timbs's "Things not generally known."*

THE CUSTOM-HOUSE, LONDON.—With reference to the Custom-house, was it not proved at the trial, that piles were charged as 30 feet long, only entering the ground 3 feet? Was it not proved that even then the *piers* were not built *over* these piles? I would not speak ill of the dead, but if the truth for that sake is to be avoided, how can we obtain history? Scarlet (Lord Abinger) was concerned in the Custom-house trial: see what he said in Lord Byron's trial on "The Vision of Judgment!"—A. B.

FATAL FALL OF A FLOOR AT CORK.—Last week, at a "wake" in "Penrose-square,"—a kind of court or lane off Duncan-street, in the "Marsh," at least fifty persons, assembled in one room of a miserable dwelling, were precipitated, by the fall of the floor, not only to the story beneath, but through that also, to the ground-floor, carrying the second-floor with its occupants along with it, and burying also those of the ground-floor beneath both of those above. In course of the next two hours eighteen killed and sixteen wounded were dragged out.

TENDERS

For two houses on the Brockley-hill Park-estate. Messrs. Morgan and Phipson, architects. The quantities supplied by Mr. Morris Evans:—

Foster	£2,463	0	0
Barrett	2,177	0	0
Day and Co.	1,950	0	0
Rolfe	1,792	0	0
Robinson	1,789	0	0
Todd	1,748	0	0
Simmonds	1,498	10	0
Cowley	1,354	0	0

For alterations and additions to a House in Grosvenor-place. Mr. E. I'Anson, architect:—

Lucas, Brothers	£2,870	0	0

Wages not such an object as constant employment.—Address, F. K. L. care of Mr. Stuart, Bookseller, &c. Farnham, Surrey.

TO BUILDERS, CARPENTERS, &c.

A FIRST-RATE CARPENTER and JOINER is desirous of taking TASK WORK to any amount, either small or great; also shop-fronts. Satisfactory references given. — Address, A. B. No. 6, Westbourne-gardens, Westbourne-grove West, Bayswater.

A MANAGER of an Iron Ship Building Works, a Government gunmaker, and a founder by trade, is in want of a SIMILAR SERVICE. He has been in the same firm seventeen years. Satisfactory testimonials and reference can be given.—Principals are requested to reply.—Address, C. H. Post-office, Warrington.

TO LIME, TILE, BRICK, AND CEMENT MERCHANTS.

A YOUNG MAN, aged 26, who has had nine years' experience in the above trades, desires EMPLOYMENT. He is capable of keeping books by double entry, and is used to collecting satisfactory references as to ability, integrity, &c. can be given.—Address, prepaid, to W. H. Palmer's Library, 27, Lamb's-conduit-street.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

A PRACTICAL MAN, aged 32, of steady and industrious habits is in WANT of a SITUATION with either of the above. He is a good draughtsman and accountant, and has had the entire management of buildings of magnitude.—Address, by letter only, to C. A. F. care of Mr. Bayley, Printer, Cross, Oswestry.

TO BUILDERS.

A N experienced CLERK, who has practised as a Surveyor, wishes an ENGAGEMENT in an office to take out quantities, make plans, estimates, &c.; is well acquainted with the routine of a builder's office. Salary moderate. Good references. - Address, R. S. 5, Gloucester-street, Park-street, Camden-town.

TO ARCHITECTS.

A S CLERK of WORKS.—WANTED, by a practical Man, a RE-ENGAGEMENT. Satisfactory references from architects will be given.—Address, T. B. Office of "The Builder."

TO NOBLEMEN, GENTLEMEN, SURVEYORS, AND OTHERS.

A GENTLEMAN of considerable practical experience in surveying, building, brickmaking, and general management of house property, desires an ENGAGEMENT (with a view to a partnership or otherwise). Has had the entire management of one of the largest estates in the vicinity of London, now nearly covered, and is prepared with the highest testimonials, and security to any amount.—Address, AGENT, Office of "The Builder."

AN efficient BUILDER'S CLERK, thoroughly conversant with Measuring, Estimating, and Accounts, and a good plain Draughtsman, is desirous of an ENGAGEMENT either in the Office or on the Works, or to manage a Jobbing Business The most satisfactory references and testimonials may be relied on, and security, if required.—Address, AMICUS, Retreat Cottage, Dorking, Surrey.

TO BUILDERS, SURVEYORS, AND AUCTIONEERS.

A RESPECTABLE YOUNG MAN requires a SITUATION in one of the above Offices, or otherwise. He served his time to a bunker and surveyor in the country, and has since been clerk to a large builder in town. He has a knowledge of plain drawing, and the routine of the Office.—Salary moderate. Age, 26 years. Good references.—Address, W. S. No. 64, John-street, Cambridge heath, Hackney.

TO ARCHITECTS, &c.

A NEAT DRAUGHTSMAN, accustomed to the general routine of an office, is desirous of an ENGAGEMENT.—Address, N. Y. Z. 1, Albion-terrace, De Beauvoir-square, Kingsland.

TO BUILDERS AND OTHERS

A GOOD PRACTICAL CARPENTER and JOINER wishes to meet with a CONFIDENTIAL ENGAGEMENT.—First-class references. Security if required.—Direct to KING, 14, Ledbury-road, Westbourne-grove West.

TO PLUMBERS, PAINTERS, &c.

A YOUNG MAN from the country, aged 22, wishes to obtain a SITUATION as IMPROVER, in the PLUMBING and PAINTING Business.—Address A. L. 4, Edward-square Mews, Kensington.

A GOOD and practical DRAUGHTSMAN, accustomed to taking out quantities, measuring up works, and land surveying, is open to an ENGAGEMENT at a moderate salary. Good references.—Address, W. R. J. Samuel's Library, Ashmolin street, Camden-town.

DUTCH CLINKERS IMPORTED by H. VAN KEMPEN, 4, Basinghall-court, Philpot-lane.

TO BUILDERS, SCAGLIOLA WORKERS, AND OTHERS.

WANTED, FOUR COLUMNS, either in Marble, Scagliola, or Wood, with Ionic Capitals and Bases of Stone or Marble. Full height, 10 feet 1 inch. If in Scagliola or wood to represent the above marble. Lowest price, full description, and where to be viewed.—Apply to J. LATIMER and SON, Architects and Surveyors, Stratford-on-Avon, April 7th, 1856.

STEAM-ENGINE WANTED.

A GOOD SECOND-HAND CONDENSING BEAM ENGINE, of from Twenty to Thirty Horse Power. State size of cylinder, air pump, and price.—Apply to Mr. MILLAR, Engineer, Borough-road, Southwark. Also, a Twenty to Thirty Horse CORNISH or ELEPHANT BOILER.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at the Wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Rigging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

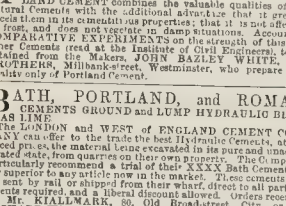
PORTLAND and BATH CEMENT.—FULLWOOD, THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

BATH, PORTLAND, and ROMAN CEMENTS GROUND and LUMP HYDRAULIC BLUE LIAS LIME.



The undersigned, being AGENTS for the ENGLAND and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being excavated in its pure and unadulterated state, from quarries on their own property. The Company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or shipped from their wharf, direct to all parts. Agents required, and a liberal discount allowed. Orders received by Mr. KIALLMARK, 80, Old Broad-street, City, or by RICHARD WINTER, Cement Works, Dunball, Bridgwater.

TO BUILDERS, CONTRACTORS, SHIPPERS and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.

IN EVERY VARIETY

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT.—CHARLES NELSON, having completed his works for the manufacture of the above Cement, can supply Contractors, Builders, &c. with a very superior article. The manufacturing department being under his own immediate superintendence, he can confidently recommend it for all works in which Portland Cement is used, and only requires a trial to insure approbation.

Orders addressed to

London Depôt, 16, South Wharf, Paddington,

BLYTH, BROTHERS, Sole Agents,

will meet with immediate attention.

Manufactory—Enwerde Mills, Warwick.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT. Messrs. ROBINS and Co. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

PORTLAND and BATH CEMENTS.

PORTLAND and ROMAN CEMENT.

PLASTER of PARIS

Manufactured by J. M. BLASHFIELD, at Millwall, Isle of Dogs, Warehouse, No. 1, Wharf, Padlington-basin.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be altogether avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and wherever White Paint is required. Paint-dealers in Original Packages, each cask stamped—HUBBUCK LONDON—PATENT. And when so marked the quality is guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, Limehouse.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured of those works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise. London Wharf, Belvedere-road, Lambeth.

DOVERCOURT CEMENT WORKS, HARWICH, ESSEX.

JOHN PATTRICK having now the only ROMAN CEMENT Manufacturer at Harwich, hereby informs the public that he continues to carry on a Wholesale business, and offers to Contractors, Builders, &c. by the freight or half freight, ROMAN CEMENT of best quality upon advantageous terms.—Application either at Harwich or to his Agent, GEORGE MORRIS, 20, New Ormond street, Queen-square, London.

P.S. Inland London trade will in future be supplied from Messrs. ROBINS and CO. Scotland-yard, Westminster, instead of Whitefriars.

BLUE LIAS LIME.—CHARLES NELSON begs to inform Engineers, Architects, Contractors, Builders, and the Trade in general, that he is prepared to supply direct from the Works in his own boats to any part of the Thames, River Lee, on any canal or by rail to all parts of the Kingdom, large quantities of the above GENUINE HYDRAULIC LIME now so extensively used.

Quality, Weight, and Measure may at all times be strictly relied on. Reference in proof of the above can be given.

N.B. The Captain of the Boat will always bring with him the Grand Junction Canal Note, from which the contractor will be enable to know exactly what weight of Lime he is paying for.

All orders addressed to me, at

LONDON DEPÔT, 16, SOUTH WHARF, PADDINGTON.

BLYTH, BROTHERS, SOLE AGENTS,

Will be promptly attended to, and any further information can be obtained from them

Works, Stockton-field, near Southam, Warwickshire.

PLASTER of PARIS.—MESSRS. BLYTH, BROTHERS, beg to acquaint the trade, that they have made a considerable reduction in price; the quality they are now manufacturing cannot fail to give entire satisfaction. Samples and prices forwarded to any part of England, or the metropolis. No extra charge made to any wharf or railway station in London. Any further information can be obtained at their Works, Balfield's-place, Gray's-inn-lane, Holborn; or at the Blue Lias Lime Depôt, 16, South Wharf, Paddington.

GREAVES'S BLUE LIAS LIME, PORTLAND, BATH, and LIAS CEMENTS, at Rugby, Stockton, and Wilmcote, Warwickshire.—Messrs. GREAVES and KIRSHAW beg leave to inform Engineers, Architects, Contractors and the trade, that having completed their works on the Great Western Railway at Rugby, they are now prepared to supply any quantity of the above articles, and to deliver to any part of the country, by railway or canal.—Offices, Warwick.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), and 16, SOUTH WHARF ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s 9d per ton.

Small ditto, ditto, 4d per ton.

Barges loaded in a few minutes.

Woolwich-hall Grey Stone Lime Works, on the Medway, near Rochester.

NOTICE.

SOUTHAM HYDRAULIC BLUE LIAS LIME.

WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias, that he is prepared to deliver the best quality of ground and lump, into boats at the Works. Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works Southam.

JOHNS and CO.'s PATENT PERMANENT STUCCO WASH (perfectly non-absorbent) STUCCO CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road, Office, 4, George-yard, Lombard-street.

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Loam, Whiting, Whiting Sand for whitewash, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brick making, &c. &c. sent by barge from Messrs. MEESON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 200 to 300 tons can load alongside the wharves at Grays. At MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above-named articles can also be procured, as well as all kinds of fire goods, both Welsh and Newcastle, Fire-clay, Flare-burnt Lime, and Marble and Temper Lime; and here lime is packed in hogsheads, casks, jars, &c. for exportation

General Office—No. 12, GEORGE-YARD, LOMBARD-STREET. Letters addressed to Grays, Essex, will meet with immediate attention.

WHITE SUFFOLK and RED FACING BRICKS.

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors,

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE, 8, ADELAIDE-PLACE, London bridge.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hours walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock and to judge for themselves.

Main Place half-washed Stocks, and Place Bricks, also on sale. These bricks are good, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Likewise delivered, Pit Sand of a) proved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BROWN'S WELLS BRICKFIELD, PINCHLEY, near the three Cemeteries.—TO BE LET, upon very moderate terms the above FIELD, containing 9½ acres of good brick earth.—For terms and other particulars, apply to Mr. A. RICHARDS, Auctioneer, Tottenham.

TOTTENHAM.—TO BE LET, a FIELD, containing Six and a half Acres of excellent Main Brick Earth, situated by the side of the high road, five and a half miles from London. The bricks made in this field have always found a ready sale.—For terms and other particulars, apply to Mr. A. RICHARDS, Auctioneer, Tottenham.

NEW BRICKS for SALE, DELIVERED ON THE FIELD.

Place.	Grizzles.	Stocks.	Malms
18s.	22s.	30s.	36s. and 45s. per 1,000.

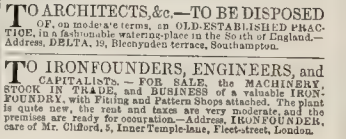
DELIVERED AT CROYDON RAILWAY STATION.

Place.	Grizzles.	Stocks.	Malms.
22s.	25s.	29s.	39s and 48s. per 1,000.

For further particulars, apply to Mr. S. DARNELL, Brickfield, St. James's-road, Croydon

IMPROVED BRICK and QUARRY-PRESSING MACHINES, made by THOMAS PORTER, LONDON-ROAD, Leicester.—"P. begs to inform Architects, Builders, Brickmakers, and Others, that he is now engaged in making and selling his PORTABLE BRICK-PRESSING MACHINES, at considerably reduced prices. The boxes are lined with brass.

For design of Press, refer to "The Builder," January 19, 1856.



PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with those employed for PORTABLE BRICK-PRESSING MACHINES, at considerably reduced prices. The boxes are lined with brass.

For design of Press, refer to "The Builder," January 19, 1856.—Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPÔT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REWARD OF THE JURIES," page 681. of the Great Exhibition, rank the Manufactories known so long as "The Piteries," Tunstall, Stafford-shire, as the first of the kind in the world.

PATENT PAINT for BUILDERS and IRONFOUNDERS. The LONDON PATENT ANTI-OXYDE PAINT has been specially chosen by the Government Engineers as the best, cheapest, and most durable that has ever been discovered.—Address to Mr. DEANE WALKER, at the Office of the Company, 29, New Bridge-street, Blackfriars, where very information is afforded.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 1, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses; it is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

TO ARCHITECTS, &c.—TO BE DISPOSED OF, on moderate terms, an OLD-ESTABLISHED PRACTICE, in a fashionable watering-place in the South of England.—Address, DELTA, 19, Bleinyoden terrace, Southampton.

TO IRONFOUNDERS, ENGINEERS, and CAPITALISTS.—FOR SALE, the MACHINERY, STOCK IN TRADE, and BUSINESS of a valuable IRONFOUNDERY, with Fitting and Pattern Shops attached. The plant is quite new, the rent and taxes are very moderate, and the premises are ready for occupation.—Address, IRONFOUNDER, care of Mr. Clifford, 2, Inner Temple-lane, Fleet-street, London.

TO BUILDERS.

LEE, near BLACKHEATH.—FRONTAGES TO BE LET, for detached or semi-detached villas, on the Belmont Estate. This estate contains the finest sites for building purposes anywhere round London, and good villas are in great demand, on account of the situation being lofty, dry, well drained, and exceedingly healthy. Assistance will be afforded to responsible parties.—For particulars, apply to Messrs. J. and C. W. TODD, Milner-street, Brompton, London, or Belmont, Lee, Kent; or Messrs. NELSON and INNES, 6, Whitehall, and of Messrs. KIRKMAN and ENGLEHEART, King William-street, City.

OXFORD.—Valuable BUILDING LAND, to be LEASED on a term not exceeding 99 years. It immediately adjoins the City of Oxford, and belongs to the President and Scholars of St. John's College. The land is proposed to be let in large or small quantities, for the erection of private residences, and builders, speculators, and others may obtain allotments on such terms as will insure peculiar advantages, as it is well known that genteel residences are much wanted, and in daily request. It is most healthily situated on a fine bed of gravel, has springs of pure and excellent water, and good bricks may be obtained within a few hundred yards of the site.—For particulars, apply to Messrs. BECKHAM and CO. 6 and 7, St. Aldate's-street, Oxford.

LEASEHOLDS.—TO BE SOLD, by Private Contract, a very desirable LEASEHOLD ESTATE, consisting of first-class private dwelling-houses, held direct from the freeholder for a long term at low ground-rents, delightfully situated within three miles of the City.—Apply for particulars to Mr. CHARLES STROUDHILL, Solicitor, 7, Coleman-street, London.

£400 for 12s. per week, and no interest to pay.—The ALLIANCE BUILDING SOCIETY is formed for the purpose of advancing sums not exceeding the above amount, without interest, for the purposes mentioned in its prospectuses, &c.—early rights to which may be secured on or before TUESDAY next. Surveyors and others desirous of furnishing the Society with plans for building, may obtain every information as to the Society's intended mode of operations, by applying to Mr. W. F. SCALES, High-street, Shoreditch.

J. W. BROOKS, Secretary
Subscription Office,—St. Thomas's National Schools, New Charles-street, Hackney-road.

TO BUILDERS and OTHERS. — An excellent SITE TO BE LET or SOLD, for BUILDING PURPOSES, with a good double frontage, situate in a leading thoroughfare, and in an established neighbourhood, well adapted for shops and dwelling-houses, and workshops. The materials of the present erections may be used if sound, in erecting any new buildings that may be approved. Money will be advanced if required by the purchaser, or taken to carry out the undertaking, upon a satisfactory arrangement.—Inquire of Messrs. HOWARD and DOLLMAN, Solicitors, 141, Fenchurch-street; Mr. EDWARD LOWTHER, 38, Red Lion-street, Clerkenwell; or of Mr. MURRELL, Auctioneer, 1, Walbrook, City.

TO ARCHITECTS and OTHERS.—TWO GOOD SETS of CHAMBERS to LET. Gas and other conveniences laid on.—30, Southampton-street, Strand.

WATERSIDE PREMISES.—Wharf, with use of Crane, excellent Suite of Offices, Roomy Dwelling-House, Two Large Warehouses, and Stores; and well situated in the heart of London, TO BE LET at a moderate rent.—Apply at 70, Bankside, Southwark.

TO BUILDERS.—WANTED, in a thoroughfare between Cheapside and the river, a strong LIGHT WAREHOUSE, with crane at top, and loopholes to each floor with dwelling attached, or containing rooms which might be converted into one. The Advertiser will be happy to treat with any person willing to build or alter premises to suit him.—Address, post-paid, to G. Messrs. Dando and Todhunter, Stationers, Gresham-street, City.

WAREHOUSE PREMISES WANTED, in or near the City, suitable for a wholesale and manufacturing vinegar and wine trade. Must have spacious cellarage and basement, with warehouse, yard, office, and stable. Easy of access, and in good repair.—Address, A. B. care of Mr. J. Child, Builder, 34, Shoemaker-row, Doctors'-commons.

TO CARPENTERS and OTHERS.—A rare opportunity for a young beginner, a very excellent but small BUSINESS, to be DISPOSED OF, immediately, through the decease of the proprietor. A good workshop, benches, and all necessaries for carrying on the trade, complete. Rent very low; coming in easy.—For particulars, apply to Mr. JNO. LAKE, Barking, Essex.

TO STAIRCASE HANDS.
WANTED TO LET, piece-work, several FLIGHTS of contingued RAIL STAIRS.—Apply to J. and J. COLEMAN, Builders, New Weston-street, Southwark.

NOTICE. — To BUILDERS, CONTRACTORS, and OTHERS.—WILLIAM MARSHALL begs to inform the trade generally, that he has about 10,000 feet of well-seasoned WAINSCOT, in all thicknesses, and at the lowest cash price. Also a very fine Stock of WALNUT, ROSEWOOD, and MAHOGANY, in plank, board, and veneer, at his Timber-yard, Vincent-street, Old-street-road.

GREAT REDUCTION. — Yellow Deals, 3s. 6d.; Pine Plank, 3s. 9d.; 2½ Yellow Battens, 12l. 10s. per 120—12 feet; 1-inch Mahogany, 6d.; F Walnut, 7d. per foot. Cartage free in Town.—T. FORMAN, 1, Walnut-Tree-Walk, Lambeth.

EDWARD SIMMS begs to inform Builders and the trade, that he has now on hand at his manufactory (the first of its kind ever established), a large assortment of PREPARED FLOORS and MATCH BOARDING, seasoned, and ready for use, from ¾-inch to 1½-inches thick, in White or Yellow Deal, Oak, or Pitch Pine. Also Dry Deals, in all thicknesses, Slating Battens, Pantile Laths, Oak Planks, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application.—Address, E. SIMMS, Flooring Manufactory, Wilton-road, Pimlico; and Sawing, Planing, and Moulding Mills, King's-road, Chelsea.

COUNTER TOPS.—R. VIGERS, TIMBER MERCHANT, Kennington, Surrey, solicits the attention of builders and shop-fitters to his carefully selected MAHOGANY, suitable for Counter Tops, and for his seasoned Materials for builders, cabinet and blind makers, &c. Delivered, cartage free, to any of the London railway stations, or within three miles from Kennington Church.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

TO BUILDERS, CARPENTERS, &c.
SAMUEL CROWHURST, Jun. begs to call the attention of Builders, Cabinetmakers, &c. to his Stock of seasoned and well-assorted Timber Goods, Deals, and Mahogany, in Logs, Planks, Boards, &c. at prices which will be found equal if not less than any advertised. Country Builders supplied on the most liberal terms.—Timber-yard, Hanover-street, Walworth; and Francis-street, Newington, near the Church.

MACHINE CARVING WORKS (Patent). Ecclesiastical and every other description of CARVING. A magnificent Gothic Screen, Carved Glass Frame, and other specimens. Tables, Chairs, Lecterns, &c. Designs and estimates at the Works, Belvedere-road, Lambeth, foot of Hungerford-bridge.

ACORN TIMBER WHARF and SAW MILLS,
CANAL BRIDGE, OLD KENT-ROAD, LONDON.
A Monthly Price Current forwarded on application.
RICHARD MAY, Proprietor.

GREAT REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of buyers to the great reduction in the price of Yellow Deals, and the very low prices of Pine and other Deals, &c. &c.:—

Yellow Deals, from	£21	0 per 190
Do. Battens	13	10 "
Spruce Deals, from	18	0 "
Pine Plank, 12 ft. 3 in. by 11, from	22	10 "

Prepared Flooring, &c. equally low. A list of prices forwarded on receipt of a postage stamp.—Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

SEASONED FLOORING.—GEO. NOKES and CO. (late Archbutt and Atkinson), beg to acquaint builders and the trade, that they have a large STOCK of DRY WHITE and YELLOW FLOORING, prepared by machinery, always on hand, at the following reduced prices, for cash:—

½ inch White,	13s. 6d. per square.	½ inch Yellow,	15s. per square.
¾ ditto	16s. "	¾ ditto	16s. 6d. "
1 ditto	18s. "	1 ditto	20s. "

Also Timber, Deals, Planks, &c. Mouldings by machinery in very great variety.
ST. PANCRAS SAW-MILLS, Cambridge-street, Old St. Pancras-road.

TO BUILDERS AND OTHERS.
AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH-BOARDING of all descriptions. Also an extensive stock of Dry White Yellow, and Pine Cut Stuff, Slating Battens, Pantile Laths, Oak Plank, Sash Cills, &c. Office, Belgrave Works, Thames Bank, Pimlico.

MOULDINGS BY MACHINERY, Capping, Sash Bars, Beads, &c. to any Design, carefully packed and sent to all parts of the Country. A Pattern List sent on application to
E. SIMMS,
SAWING, PLANING, AND MOULDING MILLS,
KING'S-ROAD, CHELSEA.
AND WILTON-ROAD, PIMLICO.

TO BUILDERS, COACH-MAKERS, DECORATORS, and PAINTERS, &c. &c.
CHAS. W. NOBLE (late A. and F. Strong), VARNISH MANUFACTURER, continues to supply every description of Varnishes and Colours, of the very best quality, and at the lowest prices. The Varnishes manufactured by Noble and Hood the test of many a century, made of pure materials, insuring that desideratum in varnish—body, polish, and finish,—for which his predecessors have been so long and so favourably known.
*** Methylated Spirit Varnishes, Polishes, &c.; also Noble's Enamel Paper Varnish, for decorators, &c. Coach-painters' and Lithographic Colours.
N.B.—Merchants and shippers will find an advantage in exporting Noble's Varnishes.
Manufactory—MITCHAM, Surrey.
Wholesale and Retail Warehouse—117, LONG ACRE, London

TO TIMBER MERCHANTS and OTHERS. The Proprietors of Lett's Wharf, Commercial-road, Lambeth, offer the most convenient Wharf for landing all sorts of English Timber, &c. Spacious Dry and Drawing Docks, 30 and 10-ton Cranes, Sawpits for converting Timber, &c. Freights paid on delivery.—Apply to G. NOKES and Co. as above.

LETT'S WHARF PATENT SAWING, PLANING, and VENEER-CUTTING MILLS, Commercial-road, Lambeth.—The proprietors beg to announce to the trade that they have completed their extensive arrangements, and will be happy to execute all orders intrusted to their care with despatch and punctuality.
N.B. All goods sawn at these mills fetched and delivered free of charge.

A SUBSTITUTE FOR PAINT, AND AT HALF THE COST.
STEPHENS' DYES or STAINS for WOOD. The following extract from a letter the Proprietor has obtained leave to make public:—" Northgate, Colchester, Feb. 5, 1855.—Sir,—I have just finished a new church with your Oak Stain, and I consider it the best adapted for the purpose, being the nearest approach to the real wood of any I have ever used.—I am, sir, your obedient servant,
" SAMUEL GRIMES, Builder.
" To Mr. Henry Stephens, 54, Stamford-street, London."
Samples and prospectuses free to any part of the kingdom.

TIMBER SAWING-MILLS, Belvedere-road, Lambeth.—ROBINSON and BARTRAM respectfully inform their friends in the Timber and Building Trades, that they have now completed their New Mill for Sawing, Building, and other Timber, and will be glad to receive their favours in this department of sawing. Full particulars will be forwarded on application, per post or otherwise. Timber up to 55 feet long, can be cut at these mills.—N.B. A powerful Crane for landing timber on to carriages, at 1s. 3d. per load.

NEW KENT-ROAD SAW-MILLS, half-way between Surrey Docks and West-end.—Messrs. TAYLOR and BUCKLEY beg to inform Timber Merchants, Box Makers, and Others, that having made large additions to their machinery, they are in a position to execute orders on the shortest notice. Extensive premises for piling goods. List of prices will be forwarded upon application.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.
Diving-dresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.
Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.
N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

CHAS. MACINTOSH and CO. Patentees of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS of WATERPROOF, AIRPROOF, and ELASTIC RUBBER GOODS beg to inform all persons who desire to correspond with them direct, that their SOLE ESTABLISHMENTS are No. 3, Cannon-street West, London, and Cambridge-street, Manchester. This notice is necessary, as the term Macintosh Depôt, Macintosh Warehouse, &c. is frequently adopted both in London and the country by vendors of India-rubber goods, who deal in articles not of the manufacture of CHAS. MACINTOSH and CO. — Goods manufactured by CHAS. MACINTOSH and CO. are stamped with the name of the firm.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 60 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.

No. 1 quality, inches diameter, and price per yard.						
½	¾	1	1½	2	2½	3 in.
9d.	11d.	1s.1d.	1s.3d.	1s.5d.	1s.7d.	1s.9d.	2s.	2s.3d.	2s.6d.	2s.9d.

Super-extra stout quality.

2	2½	3	3½	4 inches.
2s.	2s.3d.	2s.6d.	2s.9d.	3s. per yard.

No. 0. A cheaper hose, to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.

½	¾	1	1½	2 inches.
9d.	10d.	11d.	1s.	1s.3d.	1s.6d. per yard.

The Hose is Burnettized at an extra charge of 3d. per yard. Union Joints, Branch Pipes, and Jets, are also supplied.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., YENTNOR, ISLE of WIGHT.—Second Testimonial.—" March 10th, 1856.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

TO ENGINEERS, MILL-OWNERS, &c.
N. Woolwich Elastic Steam-packing (Canvas and India-rubber), at 1s. 4d. per lb.

S. W. SILVER and CO. INDIA-RUBBER WORKS, North Woolwich (opposite H. M.'s Dockyards), having considerably extended their manufacture in order to meet the daily increasing demand upon them for this effective and durable article, are enabled to offer the very best materials at the reduced price of 1s. 4½d. per lb. delivered in London, for sheet and rope
Testimonials may be seen at S. W. SILVER and CO.'s Warehouses, Nos. 3 and 4, Bishopsgate-street (opposite London Tavern), where orders for Steam Packing, also Buffer Springs, Pump Clacks, and the various India-rubber appliances, will meet with prompt attention.
CAUTION.—S. W. S. and Co. have found it necessary to stamp all their manufacture, thus—" S. W. SILVER and CO. WORKS, NORTH WOOLWICH."

MONEY on LOAN, at 3l. per Cent. per Annum.—ARNEWAY'S CHARITY.—NOTICE IS HEREBY GIVEN, that the Trustees of this Charity are enabled to lend out the Trust Moneys to poor occupiers or traders, resident within the City and Liberty of Westminster, that is to say, within the parishes of St. Margaret and St. John the Evangelist, St. Anne, Soho, St. Clement Danes, St. George, Hanover-square, St. James, St. Martin-in-the-Fields, St. Mary-le-Strand, and St. Paul, Covent-garden. The amount of each loan is not to exceed 100l. is to clear interest after the rate of 3l. per cent. per annum, and is to be secured by the bond of the borrower, with two sureties. Forms of Application, and all necessary information, may be obtained by applying personally, between the hours of Ten and Three o'clock in the day, at the office of the Clerk and Solicitor to the Trustees, No. 14, Great Queen-street, St. James's Park.
By order, EDWARD S. STEPHENSON,
Clerk and Solicitor to the Trustees.
NOTE.—The Trustees meet on the second Wednesday in every month, to consider such applications for loans as have been sent in one clear week at the least before the first day of the month.—The sureties must be unexceptionable

DOUCEUR 100l.—A Gentleman, aged 30, of active and business-like habits, an architect, and first-rate draughtsman, possessing a thorough practical knowledge of building, together with a general knowledge of civil engineering, desires an APPOINTMENT, where he can be actively engaged (under a principal), on Government or Railway Works. To any party legally procuring the advertiser a permanent appointment as above, he will be happy to present the sum of 100l. Reference will be given and required.—Apply by letter, stating full particulars, post-paid, to W. F. S, Albert-terrace, Old Kent-road, London

ROYAL POLYTECHNIC.—Patron, H.R.H. PRINCE ALBERT.—Entirely new, grand, historical, romantic, and musical entertainment, entitled "Kenilworth, and the Visit of Queen Elizabeth to the Earl of Leicester," with splendid Dioramic Illustrations; the Grand Hall of Kenilworth by Messrs. Carpenter and Westley. This entertainment, written by G. Moore, Esq. will be given every morning at 3·45, and evening at 8·45, by F. L. Horne, Esq. who, with the Misses Mascall, will sing the vocal illustrations. Also, a series of splendid Dioramic Pictures of the total Destruction of Covent-garden Theatre, mornings at 2, evenings at 7·45. New Lecture and Experiments by J. H. Pepper, esq. with the Electric Light and three enormous Concave Mirrors, showing their optical and color-ific effects. Original Entertainment by Mr. Matthews, entitled A Peep at Ancient and Modern Magic. 3,000 Models and Works of Art on view, with a good collection of Russian Trophies, and a Russian Carriage, brought from Balaklava by Capt. Barclay, in the *Monarch*, as the identical Carriage of Prince Menschikoff, captured at the Battle of the Alma. Admission to the whole, 1s.; children and schools, half-price. Open from 12 till 5, or from 7 till 10.

TO BUILDERS.
LATHS for SALE.—100 loads of the best PETERSBURG LATHS for sale. Price 33s. cash.—Inquire of JOHN NEWTON, Hertford-road, Kingsland-basin.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.
J. W. & SONS having of late devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system which gives superior tone and facility for ringing.

B. FOWLER & CO.'S PORTABLE PUMPS,

3-inch to 9-inch Barrels.

Plain or Sliding Telescope Suction,

ON HIRE.

SINGLE AND DOUBLE PUMPS, all sizes, to any depth, for Hand or Steam Power.

Patent Double-action and General Pump-makers, Builders' Smiths, &c.

WHITEFRIARS-STREET, Fleet-street.

R. RICHARDS and CO. PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

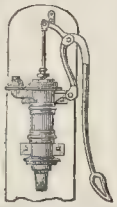
PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 28s. per doz. painted.
Ditto .... 42s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.



TO BUILDERS AND PLUMBERS.

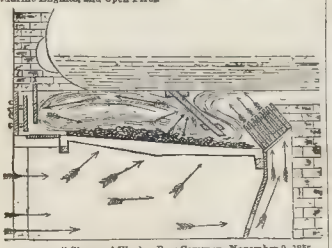
The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than Pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 32 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS, 8, Crescent, Jewin-street, London, Manufacturers and Patentees.



STEAM-ENGINE and BOILER, a Bargain. A nearly new high-pressure STEAM-ENGINE, four-horse power, with metallic pistons and wrought-iron crank, and shaft and heavy fly-wheel and riggers, and wrought-iron boiler and force-pump, &c. &c. complete. Can be seen at work.—Apply by letter, to J. PRIME, 17, Vauxhall Bridge-road.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

LESS FUEL, MORE STEAM, NO SMOKE.

GARDNER'S PATENT SMOKE CONSUMER is SELF-ACTING, EASILY FIXED at a SMALL COST, IMPROVES the DRAUGHT, and SAVES FUEL. Applicable to all Furnaces, Boilers, Ovens, Locomotives, Marine Engines, and Open Fires.

"Chemical Works, Bow Common, November 9, 1855.

"DEAR SIR,—In answer to your further inquiry concerning the saving of fuel in connexion with the use of your patented apparatus, to which inquiry I was hitherto, from incomplete observation, unable to reply, I beg now to state that we are enabled without difficulty and without smoke, to command a full supply of steam, and to generate it much quicker than we could previously. We employ an ordinary furnace coal. I feel satisfied there is a considerable saving of fuel, the precise amount of which we cannot at present determine.

"I remain, dear Sir, yours truly,
"FRED'K. ALLEN.

"To E. V. GARDNER, Esq."

Apply to the PATENTEE, 21, Norfolk-street, Middlesex Hospital; or to Messrs. BURRIDGE and HEALY, 128, Dorset-street, Fleet-street; or Z. D. BERRY, Albion Works, Victoria-road, Pimlico.

Bakers' Ovens fitted for St. license included.

PREVENTION of SMOKE in FURNACES and ECONOMISING FUEL.—W. SMITH, PRACTICAL ENGINEER, 28, Margaret-street, Cavendish-square, continues to fit complete Apparatus on the most improved principles.

THE BRANKSEA POTTERY,

NEAR POOLE, DORSET.

GREAT REDUCTION IN PRICES OF DRAIN-PIPES.

TO THE METROPOLITAN BOARD OF WORKS, DISTRICT BOARDS, BOARDS OF HEALTH, TOWN COUNCILS, IMPROVEMENT BOARDS, SURVEYORS, AND BUILDERS.

THE BRANKSEA POTTERY and CLAY COMPANY are prepared to supply all descriptions of Glazed Drain-pipes, Bends, Double and Single Junctions, Closet-pans, &c. Also, Terra-cotta Chimney-pots and Fire-bricks of a very superior quality at moderate prices.

N.B. A LIBERAL DISCOUNT TO THE TRADE. A LARGE ASSORTMENT OF GOODS CONSTANTLY ON SALE.

The clay obtained from the pits on the island of Branksea is of the finest quality, and the goods are manufactured by men of long experience in the trade, with the aid of powerful machinery. The articles offered for sale will be found to bear comparison with the best goods manufactured in any part of England.

A list of prices forwarded free on application to Mr. T. G. BECK, at NEW WHARF, No. 6, Little Abingdon-street, adjoining the New Houses of Parliament; or to Mr. R. PETTS, at the Works, Branksea Island, Poole, Dorset.

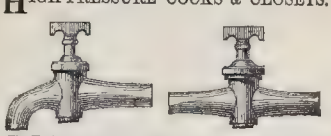
These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.
W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 23, Old Fish-street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 25s. and perfect action guaranteed.



LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE No. 7.

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,
THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.
N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price complete, 13s. 6d. each.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.
LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 113, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

SALES BY AUCTION.

SECOND PORTION.—TO RETAIL TIMBER MERCHANTS, CONTRACTORS, BUILDERS, SAW-MILL PROPRIETORS, AND OTHERS.

MESSRS. DAVIS and VIGERS are instructed by Mr. Samuel Grimsdell (on his retiring from business) to SELL by AUCTION, on the PREMISES, Bell-lane, Spitalfields, on MONDAY, APRIL 14, and following days at TWELVE for ONE, without reserve, the second portion of his well-seasoned and valuable STOCK and PLANT as Builder and Contractor; comprising 30,000 feet of Spanish and Honduras mahogany, cut from two to five years (some of great length and width, suitable for cabinet work); long Dutch cornice, Riga timber; thoroughly seasoned, first quality; picked Wyburgh prepared floor battens, and a large and useful assortment of dry cut stuff, stock of ironmongery, wrought-iron box girders, and cast iron columns; plate, crown, and other glass; sheet and pipe lead; colours, oils, turps, casp, implements and fittings; plumbers', painters', glaziers', and plasterers' shops; fifty carpenters' benches, iron cramps, together with numerous items for inside and use full property, forming the stock and fittings of a large and well-regulated builder's establishment.—To be viewed two days prior to the sale. Catalogues to be had on the Premises; of Messrs. WARRINGTON and JEFFSON, New City Chambers, Bishopsgate-street; and at the Auctioneers' Offices, 3, Frederick's place, Old Jewry.

TO COACHSMITHS, BUILDERS, SMITHS, IRONMONGERS AND OTHERS.

MESSRS. FULLER and HORSEY are instructed to SELL by AUCTION, on the PREMISES, George-street, Oxford-street, on TUESDAY, the 15th of APRIL, and following day, at ELEVEN, in lots, without reserve, 18 Tons IRON and STEEL, of IRON MONGER, including 25 tons S C bars, 2 tons Staffordshire bars, 6 tons Turton spring steel, 5 tons cast and shear steel, 2 tons coach bolts and nuts, 100 gross coach bolts assorted, 100 dozen files, 100 kegs wrought and cut nails, 20 bags horse nails, 500 gross wood screws, 5 tons coil, crane and skid chain, 2 tons barrel, washers, and bolt rings, double-purchase crab, several pairs of blocks with iron and brass sheaves, black and bright staple vices, anvils, hammers, spades and shovels, 2 tons wire, 100 gross washers, powerful draught horse, chaise and harness, and a general assortment of ironmongery.—To be viewed on MONDAY previous to the sale, when catalogues may be had on the Premises; and of Messrs. FULLER and HORSEY, Bolsterstreet, Vere-st.

BASINGHALL-STREET.—Building Materials of Weavers' Hall.

PULLEN and SON are favoured with instructions to SELL by AUCTION, on the PREMISES, on WEDNESDAY, APRIL 16th, at TWELVE, in lots, all the valuable BUILDING MATERIALS, FIXTURES, and FITTINGS-UP of Weavers' Hall, and two houses adjoining in Basinghall-street, belonging to the Worshipful Company of Weavers, comprising good sound brickwork, plain tiles and slates, capital oak and fir timber in roofs, and 130 square of boarded and timber floors, ten tons of lead, in large flats, gutters, and pipes, useful sashes, doors, wainscoting, marble chimney-pieces, carved oak panels and mouldings, stone paving, office desks and partitions, book cases, stoves, ranges, coppers, cisterns, and various useful fixtures and fittings-up.—May be viewed the day previous, and catalogues had of C. J. CONNETT, Esq. Architect, 17, Gracechurch-street, and of PULLEN and SON, 80, Fore-street, Cripplegate.

STARCH-GREEN, MIDDLESEX. To Builders, Bricklayers, and others.—TO BE SOLD by AUCTION, by

MR. JOHN JACOBS, on the PREMISES, Hewlett's Brickfields, on WEDNESDAY, APRIL 16th, 1856, at TWELVE o'clock, 1,000,000 good STOCK BRICKS, in lots of 10,000 and 20,000, the whole of which will be positively sold without reserve, in consequence of the field having to be cleared by the end of May. Starch-green is bounded by good roads, and situated in the parish of Hammersmith, within a few hundred yards of the Uxbridge-road, and about one mile distant from Kensington, Notting-hill, Bayswater, &c.—May be viewed by applying to Mr. HEWLETT, at Starch-green, of whom catalogues may be had; and of the Auctioneer, 25, Bevis marks, St. Mary-axe, City.

BUILDING MATERIALS of Five Houses, City-road.

MR. W. R. GLASIER will SELL by AUCTION, on the PREMISES, on WEDNESDAY, APRIL 16th, at TWELVE for ONE o'clock, by direction of the Corporation of the Asylum Working School, the BUILDING MATERIALS of five houses, situate and being Nos. 16, 17, 18, 19, and 20, Anderson's-buildings, City-road, comprising about 100,000 stock and other bricks, lead gutters and pipes, timber in flats, rafters, &c. flooring, doors, sashes, and frames, iron railing, stone coping, Yorkshire and other paving and plain tiles, fixtures, and fittings. May be viewed the day prior and morning of sale, and catalogues had of Messrs. WILSON and ASHLIN, Arch tects, 42, Charing-cross; of the Asylum Working School, 32, Ludgate-hill; at the Sportsman, City-road; at Garraway's; and of the Auctioneer, 41, Charing-cross.

IN BANKRUPTCY. Brentford. To Millers, Seed Crushers, Timber Merchants, and others requiring Waterside Premises and Steam Power.

CHURCHILL, MACMILLAN, and CO.
Wood Brokers, 24, Cannon-street.

SALES BY AUCTION.

NOTICE.—To CABINET-MAKERS, MAHOGANY and TIMBER MERCHANTS, &c. The next Liverpool SALE by AUCTION of MAHOGANY and other FURNITURE WOODS, Baltic and American WHITE WOODS, &c. will take place on FRIDAY morning, the 25th APRIL, 1856, at ELEVEN o'clock precisely, in the BROKER'S SHEDS, Brunswick and Toxteth Docks, Liverpool.—Catalogues, containing full descriptive particulars, may be had on application to EDWARD CHALONER, Mahogany and Timber Measurer and Broker, No. 6, East Side Queen's Dock, Liverpool.

SOMERS-TOWN.—TO BUILDERS, PIANOFORTE AND CABINET MAKERS, AND OTHERS.

MR. LEREW will SELL by AUCTION, on the PREMISES, No. 42, Union-street, Somers-town, on THURSDAY, APRIL 17th, at ELEVEN for TWELVE, about 2,000 yellow, white, and pine planks, deals, and battens, 2,000 feet wide pine board, 100 squares of yellow and white flooring, mahogany, 100 staves, 5,000 feet seasoning, dry cut stuff, doors, lenth marry scaff-id-poles, boards and cords, ladders, and much other useful stuff. May be viewed the day prior, and catalogues had on the Premises; and of the Auctioneer, Cardington-street, Hampstead-road.

TO NOBLEMEN, GENTLEMEN, ARCHITECTS, BUILDERS, LANDSCAPE GARDENERS, AND OTHERS. Second Annual Sale of the valuable and beautiful Materials manufactured of Roseone's Patent Siliceous Stone.

MESSRS. MANSELL and ELLIOTT are favoured with instructions from the Directors of the Company, to SELL by AUCTION, on the PREMISES, Whitehall Wharf, Cannon-row, Westminster, on TUESDAY, MAY 13th, 1856, and two following days, at TWELVE for ONE o'clock precisely, in lots adapted for private purchasers, the trade, and shippers, a well-selected assortment from the extensive stock at Ipswich of ITEMS adapted for ornamenting ecclesiastical buildings, mansions, and cottages, designed in the various styles of architecture by first-rate artists, including plain and elaborately-worked altar-pieces screens, chimney-pieces, basso and alto relievos, pillars, pilasters, entablatures complete, capitals, cups, vases, cornices, mouldings, porch and window dressings and architraves, brackets, trusses, enriched and plain balustrading, gate and other piers, pedestals in great variety, terminals, sablar quoins, copings, and string courses. The garden decorations comprise fountains, shell and rock work, figures, vases, tazzas, flower stands and boxes, fern tazzas, sun-dial pedestals, and terrace balustrading. The miscellaneous articles consist of coats of arms, turrets, pinnacles, fonts, mural tablets, tombs, and every item that can be made in wrought or sculptured stone. Messrs. MANSELL and ELLIOTT beg to draw especial attention to this important sale, for the Patent Siliceous Stone is superior, in appearance and durability, to any other stone, being unaffected by weather or age; and as its extraordinary capabilities of application are too numerous to particularise in an advertisement, they invite an inspection of the materials. The whole may be viewed three days prior to the sale, and catalogues had fourteen days prior) on the Premises, and at the Offices of Messrs. MANSELL and ELLIOTT, Auctioneers and Valuers, Belgrave square (corner of Chelsea-place), and 13, Birchin-lane, Cornhill, from which plates of designs may be had

CASEWICK, near STAMFORD.—To Ship Builders, Government Contractors, and Others.—TO BE SOLD by AUCTION, by

MESSRS. RICHARDSON, on THURSDAY, the 17th of APRIL, 1856, SIXTY OAK TREES, of extraordinary large size, some containing upwards of 300 cubic feet, with lop, top, and bark. The Auctioneers particularly call the attention of purchasers of large timber to the above important Sale, the timber not only being very large, but of superior quality. Six months' credit on approved joint security, or the usual discount for money. Casewick is situated about one mile from the Tallington Station on the Great Northern line of railway, and about two miles from Uffington Station on the Midland line. The Company are requested to meet the Auctioneers at Casewick Lodge at ELEVEN o'clock, and proceed to Sale.

TO BUILDERS, WHEELWRIGHTS, COACHMAKERS, AND OTHERS.

MR. F. HALL will SELL by AUCTION, on TUESDAY, APRIL 15, at ONE for TWO, on the PREMISES, Chester-gardens, Walcot-place, Lambeth, a large quantity of excellent NEW ASH TIMBER, in planks, shafts, &c. oak spokes and felloes, and a few second-hand carriages, one open 3-seat timber carriages. Also an assortment of new and old BUILDING MATERIALS, comprising yellow deals and scantlings, pine planks and battens, sashes, frames, with plate glass doors and partitions, excellent yellow timber, iron columns and tee rescue and other stores, bricks, tiles, stone, and various other effects.—May be viewed the day prior and on the Premises; and of the Auctioneer, Chester-street, Kennington.

DEPTFORD, KENT.—TO BE SOLD, pursuant to an Order of the High Court of Chancery, made in a cause "Robinson v. Makepiece," with the approbation of the Judge to whose Court this Cause is attached, by

MR. NOBLE, at the DOVER CASTLE TAVERN, BROADWAY, Deptford, on THURSDAY, APRIL 17th, 1856, at FOUR o'clock in the Afternoon, a compact LEASEHOLD ESTATE, comprising five brick-built Dwelling-houses, situate in Victory-street, Deptford, and numbered 20, 21, 22, 23, and 24; together with an improved Ground-rent of £2 per annum upon two houses in Cannon-street adjoining. May be viewed by leave of the tenants; and particulars and conditions may be had six days prior to the sale, of JOHN DOWSES, Esq. Solicitor, No. 1, Three Kings' Court, Lombard-street, and Bromley, Kent; Messrs. PARKER and SONS, Solicitors, Lewisham, Kent; JOHN MORTIMER, Esq. Solicitor, 18, Clifford's Inn; at the Place of Sale; and Taverns in the neighbourhood; and at Mr. NOBLE'S Offices, 18, Bucklersbury, and Greenwich.

Another part of the remaining portion of Messrs. Erwood and Co.'s varied Stock of Modern English Paper-hangings, comprising handsome Parlour and Chamber Damasks, good Marbles, Granites, and Grounds, removed from 16, Wellington-road, Cheapside, in consequence of the dissolution of partnership, a parcel of extremely elegant French Hangings and Decorations, consisting of small Flocks, rich Satins, and Golds, lately received from Paris; a few Marble Chimney-pieces; and several lots of Painters' and Plasterers' Brushes, will be SOLD by AUCTION, without reservation, by

MR. EDWIN WHITE, at his commodious ROOMS, 17a, BISHOPSGATE-STREET WITHOUT, on THURSDAY next, APRIL the 17th at TWELVE PRECISELY precisely. May be viewed and catalogues had the day prior and morning of sale.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 3, Danes-Inn, St. Clement's, Strand.

FREEHOLD LAND.—TO BE SOLD, about 60 Acres of valuable FREEHOLD LAND in Streatham parish, adjoining the property of Dulwich College, among the most eligible building sites.—Apply to F. B. NEWMAN, Esq. Architect, 12, Furnival's-inn.

FREEHOLD BUILDING LAND, TO BE LET, within four miles of Oxford-street, and four hundred feet above the level of the Thames, tithe free, and the land-tax redeemed. It lies on the western slope of a hill, is well sheltered from the east, and commands a beautiful and extensive view. It is close to a church and a free grammar school. It has a frontage of 320 feet to a high-road, and a depth of 200 feet. It is well stocked with fruit-trees, and ornamental trees of every growth, and is peculiarly eligible for the erection of detached or semi-detached villas, which are in great demand. About 200,000 good stock bricks are on the ground.—Apply to P. T. HARDIN, Esq. 12, Clement's-inn, Strand; or W. UNWIN, Esq. 23, Hardwood-square.

FREEHOLD BUILDING LAND.—FOR SALE, TEN ACRES, having upwards of 4,400 feet of frontage to good roads, close to Forest-gate Station, Stratford, Essex, four miles from Fenchurch-street and Shoreditch Stations; price 5,000. Also between Eleven and Twelve Acres, having upwards of 2,000 feet of frontage to good roads, near the Carshalton Station of the Epsom Railway, eleven miles from London; price 2,200.—Apply to D. B. SLADEN, Esq. Solicitor, 38, King-street, Cheapside.

FREEHOLD ESTATE at HACKNEY, near the Railway Station, where trains and other conveyances start for the City every quarter of an hour. TO BE LET, in plots averaging 130 feet deep, on building leases for ninety years, landtax redeemed. The roads and sewers are wholly completed, and the property situate on a gravel soil, in a most eligible position for villas, family residences, and shops.—For terms and particulars apply to Mr. HERING, Architect, 23, Duke-street, Portland-place; or Messrs. GRAY and SON, Estate Agents, Church-street, Hackney.

FREEHOLD GROUND, Fetter-lane.—The Commissioners of Sewers of the City of London hereby give Notice, that they will meet at the GUILDHALL of the said City, on TUESDAY, the 29th of APRIL next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for taking on BUILDING LEASE for eighty years, certain PLOTS of GROUND, situate at the south-east end of Fetter-lane. Further particulars may be had, and a plan also, on application to Mr. HAYWOOD, Engineer to the Commissioners, at these Offices in the Guildhall. The Commissioners will require a plan and elevation of the premises proposed to be built to be submitted to them for approval; and do not bind themselves to accept any proposal unless deemed advantageous. JOSEPH DAW.
Sewers Office, Guildhall, March 4th, 1856.

BUILDING LAND at ACTON, near the Railway Station, in a fine open and healthy situation, and plenty of fine water.—Apply to W. F. LOW, Esq. 67, Wimpole-street, Cavendish-square.

BUILDING GROUND TO LET.—Several Plots of Ground TO LET, in Kentish-town. Money advanced if required.—Apply to Mr. TAYLOR, Surveyor, No. 21, Lincoln's-inn-fields.

TO BE SOLD, with immediate possession, the remaining portion of a valuable PLOT of GROUND, sufficient to build two houses or villas, each house having a frontage of 25 feet, forming the best part of a fine wide street, thoroughly drained with a large new sewer, each end of the street leading to a great thoroughfare, where omnibuses pass to London every few minutes (the other part of the ground, to build sixty houses upon, was let in twelve months). It is held upon lease from the copyholder for ninety-nine years from October, 1854, and will be sold upon the following most advantageous terms: one-third of the purchase-money to be paid down immediately, and the remainder in two years.—For further particulars apply to Mr. MAYNARD, Plumber, Shepherd's-bush, Hammersmith, Middlesex.

TO CAPITALISTS, BUILDERS, RAILWAY CARRIERS, AND OTHERS.

CITY of LONDON.—Valuable and extensive FREEHOLD PLOT of GROUND, in the OLD BAILEY, TO BE LET, on a building lease, land-tax redeemed. The ground, now the site of the New Inn, has a frontage to the Old Bailey, with several returns thereof, and occupies an area of nearly 18,000 square feet, which may be increased, if required, to nearly 20,000 square feet. The premises are admirably adapted for an hotel, tavern, coffee-house, warehouses, or other buildings, on a large and comprehensive scale.—Plans of the property may be seen, and further particulars obtained, by application to the Governor-house of St. Bartholomew's Hospital, Smithfield; or to Mr. HENRY CURREY, Architect, No. 4, Lancaster-place, Strand.

£45 RENT.—MANUFACTURING PREMISES TO BE LET at UXBRIDGE.—These premises were built for engineering purposes, and well lighted. The shop is about 60 feet long, by 30 feet wide, with a large yard in front, an iron gate to the road. Dwelling-house adjoins. The railway station is behind, and the canal from Birmingham to London passes in front, presenting an excellent opening for an engineer or an agricultural implement maker. For further particulars, apply to Mr. JOHN GORDON, 3, Railway-place, Fenchurch-street.

DOWGATE-HILL IMPROVEMENT.—TO BE LET, by Tender, in two lots, on a building lease for eighty years, this desirable frontage, Lot 1, being adapted for a public-house, and Lot 2 for the erection of offices, or otherwise.—For plans, particulars, and form of Tender, apply at the Offices of Mr. D. A. CORBETT, Architect and Surveyor, 57, Fenchurch-street, City. Tenders will be opened at Peterchall, on the 25th day of APRIL, 1856, at TWELVE o'clock precisely.

CAMDEN-TOWN CEMETERY BUILDING ESTATE.—TO BE LET, on Building Leases, for Ninety-nine Years, a valuable PIECE of LAND, upon the above estate, having good frontages to Camden-street and Bayham-street, and include large frontages to an intended street, to be called Matthias-place, and more approached from Pratt-street. There is a great demand for private houses of the third-rate in this locality, which is enhanced by its near proximity to the North-Western and North London Railway Stations, and Hampstead-road.—Plans may be seen and particulars obtained by application to H. E. KENDALL, Esq. Architect, 70, Suffolk-street, Pall-mall East; or to JOHN DANGERFIELD, Esq. Solicitor, 24, Craven-street, Charing-cross.

ELIGIBLE BUILDING LAND TO BE LET, in the very best part of the immediate neighbourhood of Croydon. It is exceedingly dry and finely timbered, and within ten minutes' walk of either railway station. A very liberal peppercorn term will be granted.—Particulars apply to Mr. T. L. ROBINSON, 16, High-street, Croydon, Surrey.

BUILDING LAND near a RAILWAY STATION, where houses are much wanted. FOUR ACRES with Frontage to the south and west, about a quarter of a mile from Grays Station. The Gas main passes along the soil in front of the whole. Water laid on to the south, and land adapted for Factories with river frontage, can also be obtained on application to Messrs. MELSON and CO. GRAYS, Essex. Bricks, Lime, Rents, &c. are very easily obtainable in this neighbourhood.

LAND.—FOR SALE, a small FREEHOLD PARK, containing fifty acres, well studded with oak timber, and enclosed with park rails, situate on an eminence commanding views of great beauty over four counties, with good roads and excellent water, situate eleven miles from London and one mile from the Romford station. Well adapted for a cemetery. For particulars apply to Mr. E. SAGE, Furze House, near Romford.

STRATFORD, ESSEX. — FREEHOLD LAND within three miles of London, exonerated from land-tax, and free of tithe, TO BE LET, on lease, for a long term of years, in large or small plots, suitable for manufactories or building purposes. Apply to Mr. W. H. DEAN, Auctioneer and Surveyor, Stratford; or to Mr. GEORGE POWNALL, Surveyor, 37, Bloomsbury-square, London.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury. Printer, at the Printing-office of COX, BROAD & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, April 12, 1856.

COMPETITIONS.

TO ARCHITECTS, LANDSCAPE GARDENERS, AND OTHERS.

SCARBOROUGH PUBLIC BURIAL-GROUND.—The Scarborough Burial Board is desirous of receiving Designs, Ground Plans, Sections, Elevations, Specifications, and detailed Estimates for the LAYING-OUT as a PUBLIC BURIAL-GROUND the land selected for the site, containing ten acres, and for erecting thereon two chapels, with lodges and entrance-gates. The whole cost of buildings and entrance-gates not to exceed 9,000l. The plan and levels of the ground may be inspected at the Office of the Board, Town Hall, Scarborough, and Premiums of 15l. and 10l. will be awarded to the two designs respectively which the Board may consider as being first and second as regards merit under the circumstances. Neither of the premiums will be paid unless a Tender be accepted by the Board for the actual execution of the works at or within the stipulated sum of 9,000l. The designs and estimates, with motto, and a sealed letter similarly endorsed, containing the author's name and address, are to be sent "To the Scarborough Burial Board," under cover to their clerks, on or before the 14th day of MAY, 1856.
JOHN COOK, } Joint Clerks to the
J. J. P. MOODY, } Burial Board.

Town Hall, Scarborough, April 5th, 1856.

LIVERPOOL EXCHANGE.—The Committee of the Proprietors of the Liverpool Exchange being desirous of EXTENDING the ACCOMMODATION of the NEWS-ROOM, and of improving the arrangement of the present Offices in the Buildings, are willing to receive DESIGNS in PENCIL to effect those purposes. If more than five designs be furnished, the Committee will select that number, for the authors to perfect each a set of plans, accompanied with an estimate of the cost, for each of which 20l. will be given. Should any one plan in whole or in part be adopted, and acted upon, the designer will be preferred in carrying out the work. To be delivered on or before the 15th of MAY, to Mr. J. H. YOUNGHUSBAND, Secretary and Treasurer, from whom any further information may be obtained.

BLANDFORD UNION.—To ARCHITECTS, BUILDERS, &c.—The Guardians of the Blandford Poor-law Union solicit PLANS for the ERECTION of a NEW WORKHOUSE, capable of containing 250 inmates, with every necessary office required by the Poor-law Board. The ground on which the building is to be erected measures about 460 feet by 300. A plan of the ground if required may be obtained by application to the Clerk on payment of 5s. The drawer of the plan approved by the guardians, if sanctioned by the Poor law Board, will receive a premium of 10l. provided he should not afterwards be employed on or in the execution of the work.—Plans must be sent, free of carriage, to the Office of the Clerk, on or before the 3rd MAY.—By order of the Board.
W. H. ATKINSON, Clerk.

Blandford, April 5, 1856.

TO ARCHITECTS AND DRAUGHTSMEN.

A DESIGN is WANTED for a Suburban RESIDENCE, in the country, to contain five principal and three secondary bedrooms, morning, drawing, and dining-rooms, the latter about 24 by 18. The situation is elevated, facing the south. View also east and west; entrance to the west. The usual building materials, brick, chalk, and flint. Designs for elevations with the ground and chamber plan only required. Intended outlay, from 1,200l. to 1,400l. Grecian or Italian style preferred. A premium of three guineas will be given for an approved plan. Those not approved of will be returned on application.—Designs to be sent to Mr. W. H. STEARS, Engineer, 38, Moorgate-street, London.

CONTRACTS.

TO BUILDERS.—Sealed TENDERS, in one specific sum, will be received by the Director-General of Contracts, Pall-mall, London, on or before the 16th day of MAY, 1856, at NOON, for the following SERVICES, at BULL POINT, near Devonport, viz. :—

1. Building a Case-Store, Barrel-Store, Breaking-up-House, Tanks, Privies, &c.
2. Lengthening the Siding of Railroad outside the Magazine Inclosure.
3. Building Cottages for Two Foremen and Five Labourers.
4. Building a Store for Planks, Store for Flannel Cartridges, Foreman's Office, and Printing-press Room, &c.

Detailed specifications of the above four services, with every requisite information, may be obtained at the Royal Engineer Office, Bull Point, daily (Sundays excepted), between the hours of TEN and FOUR o'clock, from the 28th of APRIL to the 14th of MAY, 1856, both days inclusive.
Royal Engineers' Office, Devonport, April 10, 1856.

TO BUILDERS AND CONTRACTORS.

NOTICE is hereby given, that TENDERS will be received by the Director-General of Contracts, War Department, Pall Mall, London, on or before SATURDAY, the 10th day of May next, from Persons desirous of CONTRACTING with the War Department for ERECTING SOLDIERS' BARRACK ROOMS over the Stables, North Square, Brompton Barracks, Chatham. Plans and Specifications of the work are to be seen and Forms of Tender obtained on application at the Royal Engineer Office, Chatham, between the hours of Ten and Four, till the 9th of May next, Sundays excepted. The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately to be bound under a penalty of £3,000 for the due performance of the contract. Tenders to be addressed to "The Director-General of Contracts, War Department, Pall Mall, London," and to be delivered free, endorsed, "Tenders for Works at Brompton Barracks, Chatham." No Tender can be admitted after the said 10th day of MAY, 1856.
N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

TO BUILDERS AND OTHERS.

SEALED TENDERS for the following SERVICES at DEVONPORT, viz. :—

1. Building Counterscarp of the New Bastion on the right of the Lines, Temporary Bridge, &c. &c.
2. Continuing the Escarp of the Lines from Stoke Entrance-gate to the right shoulder of the Flat Bastion;

For specific sums, will be received by the Director-General of Contracts, Pall-mall, London, on or before the 5th of MAY, 1856. Detailed specifications of the above two Services, and every requisite information, may be obtained at the Royal Engineer Office, Devonport, daily (Sundays excepted), between the hours of TEN and FOUR o'clock, from the 25th of APRIL to the 3rd of MAY, both days inclusive.
Royal Engineer Office, Devonport, 12th April, 1856.

NOTICE to BUILDERS and CONTRACTORS.—ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover district hereby gives Notice that sealed TENDERS will be received at the Office of the Director General of Contracts, Pall-mall, London, on or before THURSDAY, the 1st MAY, 1856, from persons desirous of CONTRACTING for RENEWING FLOORS, CEILINGS, STAIRS, &c. at Canterbury Barracks. CONTRACTS.

TO CONTRACTORS AND BUILDERS.

SURREY HOUSE of CORRECTION, WANDSWORTH-COMMON.—The Visiting Magistrates of this Prison purpose Extending the Accommodation for Female Prisoners, and making certain Alterations in the Residences of some of the Officers. Plans, specifications, and conditions may be seen at the Sessions House, Newington from the 16th to the 20th inst. The Visiting Magistrates will meet at the said Sessions House on TUESDAY, the 29th inst. at the hour of TWO o'clock, for the purpose of opening such TENDERS for the execution of the work as may then and there be presented in pursuance of the Parliamentary Standing Orders. Further information, and the bills of quantities, may be obtained upon application to Mr HILL, Architect at 27, King street Cheapside, or Clerk of Church Buildings, Birmingham. The Visiting Magistrates do not bind themselves to accept the lowest or any Tender. Every contractor applying for a copy of the bills of quantities will be required to deposit the sum of £5, which will be returned in all cases in which a Tender has been delivered.

(Signed) WORONZ W GREIG, Clerk of the Peace.

Office of the Clerk of the Peace, Northstreet, Lambeth, April 10th, 1856.

MORTGAGES of ROCHESTER-BRIDGE ESTATES.—LOAN REQUIRED.—The Wardens and Assistants of Rochester bridge will be ready on THURSDAY, the 15th inst. (MAY), at the Audit Chamber at Rochester, in Kent, to open and consider TENDERS for LOANS from persons willing to advance TEN THOUSAND POUNDS, or any part thereof, in sums of not less than one hundred pounds each, to be secured by interest-bearing bonds, and by a first legal mortgage of the estates proper to the Bridge Corporation, under the regulations and provisions of the Rochester bridge Acts 1813 and 1833 affecting such loans and the repayment thereof, and so as the advances are to be paid within one week next after the acceptance of the proposal shall have been notified to the party making the same. Further particulars and extracts from the Acts may be obtained on application to me. Proposals in sealed envelopes, marked "Tender for Mortgage," stating the amount offered to be advanced and the rate of interest required, to be sent to me at any time previous to ELEVEN o'clock in the Forenoon of the said 15th day of MAY, 1856

By order of the Wardens and Assistants,

GEORGE FSSELL, Bridge Clerk.

The Precept, Rochester, 4th April, 1856.

MARGATE CEMETERY, SAINT JOHN THE BAPTIST. To BUILDERS and CONTRACTORS. Persons desirous of CONTRACTING for the ERECTION of TWO CHAPELS, LODGE, and BOUNDARY-WALLS, and for FORMING ROADS and LAYING out the New Burial ground for the Parish of St. John the Baptist, Margate, are hereby informed that the PLANS and SPECIFICATIONS may be seen at the Townhall, Margate, after the 8th day of APRIL instant, and until the 28th day of the same month, 1856. The Tenders are to be delivered, sealed and directed, to the Burial Board at the Town hall, where they will be opened at TWELVE o'clock at noon on that day. The Board do not pledge themselves to accept the lowest or any Tender.—S. W. TRACY, Architect, Ipswich.

JOHN POUSSETT, Clerk to the Board.

Margate, April 1, 1856.

TO STEAM-ENGINE MAKERS.

Tenders to be sent to me on or before the 6th day of MAY next. Any further information may be obtained from me or from Messrs. PRITCHETT and SONS, Architects, to the said Board, Darlington.

By order of the said Board,

RICHARD JOS. PARSONS, Clerk.

Mansfield, April 17, 1856.

TENDERS for the ERECTION of SCHOOLS. The Directors of the Railway Benefit Company are desirous of receiving TENDERS for the ERECTION of SCHOOLS, about to be built by the Company at Ridgmont, in Bedfordshire, near Merthyr Tydfil. The drawings and specifications may be seen after the 20th instant, either at the Company's Offices, 25, Lombard-street, London, or at Ridgmont. Tenders, addressed to the Secretary, at the London Offices, not later than the 30th MAY next.

Laurence Pountney lane, 11th April, 1856.

CONTRACTS.

TO BUILDERS AND CONTRACTORS.

DUDLEY UNION WORKHOUSE.—Builders and Others are invited to deliver TENDERS for the execution of the several Works required to be done in the ERECTION of a NEW WORKHOUSE, proposed to be built at Shaver's End, near Dudley in the parish of Sedgley, in the county of Stafford. The plans and specification may be seen on application to the Architects, Messrs. HILLARD and LOVATT, Market-place Wednesbury. Sealed Tenders to be forwarded under cover to THOMAS SHORTHOUSE, Esq. Clerk of the Guardians, Dudley and endorsed "Tender for New Workhouse," and must be received on or before the 1st day of MAY next. A separate estimate to be given for the School Building.—The Tenders must be made according to the form issued with the plans and specifications, to which parties are referred for all further particulars relating to the proposed contract. The Guardians do not pledge themselves to accept the lowest Tender.

CHORLEY IMPROVEMENT.—CEMETERY.—To BUILDERS and CONTRACTORS.—The Chorley Commissioners acting under "The Chorley Improvement Act, 1853," hereby give Notice, that they are prepared to receive TENDERS for the ERECTION of THREE CEMETERY CHAPELS and ENTRANCE LODGE. The drawings and specifications may be seen, and one further information obtained, at the Office of Mr. JAMES DERHAM, Surveyor to the Commissioners, on and after FRIDAY the 25th instant. Sealed Tenders to be delivered at my Office, High-street, Chorley, on TUESDAY, the 6th of MAY next, addressed "Tender for Cemetery Chapels and Lodge."

RICHARD JACKSON, Clerk to the Commissioners.

Chorley, April 11, 1856.

TO BUILDERS

PERSONS desirous of CONTRACTING for the ERECTION of the NEW CORN EXCHANGE, Chelmsford may inspect the plans and specifications, and the bills of quantities, on payment of one guinea, at the Offices of the Architect, Mr. CHANCELLOR, Chelmsford, on and after MONDAY, the 21st day of APRIL next. Tenders are to be delivered at my Offices, Chelmsford, on or before MONDAY, the 28th day of APRIL. The Directors do not bind themselves to accept the lowest or any Tender

W. W DUFFIELD, Secretary.

Chelmsford, March 27, 1856.

TO BRICKLAYERS AND OTHERS

THE VESTRY of the Parish of ST. LUKE, CHELSEA, will meet on TUESDAY, the 29th inst at the Manor House, Kings-road, Chelsea, at EIGHT o'clock in the forenoon to receive TENDERS from persons willing to contract, for twelve months for the EXECUTION of WORKS connected with the SEWERS and DRAINS, according to a schedule of prices now lying at my office Copies of the schedule, and of the proposed form of Tender, may be had upon payment of ten shillings, to be returned to parties tendering. The Vestry do not bind themselves to accept the lowest or any Tender. Parties tendering must be prepared to execute and pay for a contract, and to provide sureties for the performance of the same, if called upon by the Vestry. Tenders must be on the printed forms, and be left at my Office, on or before the 28th inst.—By order,

CHARLES BAKER, Vestry Clerk

Offices, Manor House, King's-road, Chelsea, April, 1856.

LEICESTER CORN EXCHANGE and MARKET HOUSE. To BUILDERS. Parties desirous of CONTRACTING for the EXECUTION of the WORK connected with the above, may inspect the drawings and specifications at Mr. BRIDGEWATER'S Stationer, Hotel-street, Leicester, from MONDAY, APRIL 21st to SATURDAY, the 26th inst. As each part will be required to make their tenders separately, to the new Hall, Market-place, Leicester, will attend to give any explanation required on the latter day, by ELEVEN o'clock. Tenders are to be sent in, and sent to the Committee at Mr. T. CHAPMAN BROWNE'S, Bookseller, Bible and Crown, Market-place Leicester.

BOARD of WORKS for the HOLBORN DISTRICT.—To CONTRACTORS for SEWERS, BUILDERS, and OTHERS.—The Board will meet at the Workhouse, in Little Gray's-inn-lane, on MONDAY, the 28th day of APRIL next, at TWO o'clock in the afternoon precisely, to receive TENDERS for the SUPPLY of MATERIALS, and the Execution of Jobbing and Measured Works, required for the Sewers and Drains within the District, during the ensuing Year, to be entered into until Midsummer-day, 1857. Printed forms of Tenders and schedules of prices, upon which the Tenders must be delivered, sealed up, addressed, and endorsed, at the Office of the Clerk between the hours of TEN and FOUR, on payment of ten shillings, and no other forms of Tender will be accepted. Tenders must be delivered, sealed up, at the Office of the Clerk directed and endorsed, "Tender for Sewers Work," before TWO o'clock p.m. on the day of meeting. The contractor will be required to enter into a contract, and find two responsible sureties to execute a bond with him, for the due performance thereof, to be prepared at his expense. The Board do not bind themselves to accept the lowest or any Tender.

S. W. HOPWOOD, Clerk to the Board.

Office 47, Chancery-lane, April, 1856.

HASTINGS MUNICIPAL BURIAL BOARD.—To CONTRACTORS and BUILDERS.—The Council of Hastings give Notice, that they are prepared to receive TENDERS from competent persons for the ERECTION of TWO CHAPELS, TWO LODGES, RECEIVING HOUSE, FRONT WALL GATES, PIERS, and other WORKS, at the New Burial Ground near the Church, Hastings. The plans, drawings, and specification may be seen on and after the 14th day of APRIL instant, at the Office of the Town Clerk, High street, Hastings, between the hours of TEN and FOUR p.m. where Tenders, only on the printed form supplied by the Council, are to be delivered on or before TWELVE o'clock at noon, on TUESDAY, the 29th day of APRIL next, duly signed, and agreeable to the conditions will be received. The Council do not bind themselves to accept the lowest or any Tender.—By the Council.

JOHN G. SHORTER, Town Clerk.

Hastings, April 8, 1856.

BOARD of WORKS for the LIMEHOUSE DISTRICT, comprising the parish of Limehouse, the hamlet of Ratcliff, and the parishes of Shadwell and Wapping.—JOBBING CONTRACT for WORKS to SEWERS.—Notice is hereby given, that the Sewers Committee will meet at the Offices of the Board, White Horse street, Commercial-road East, on MONDAY, the 5th MAY next, to receive TENDERS from persons willing to contract for the JOBBING WORKS and REPAIRS of the SEWERS, DRAINS &c. under the jurisdiction of the Board, up to Midsummer, 1857. Further particulars may be known and printed conditions, schedules of prices, and forms of Tender obtained by parties intending to Tender for the works, upon application at the said Offices, on and after the 28th APRIL instant, between the hours of TEN and FOUR, upon payment of two shillings, which will be returned to each person sending in a Tender. Tenders, sealed up, and endorsed, "Tender for Jobbing Works to Sewers, &c." must be delivered at the said Offices not later than TWO o'clock on 5th MAY, 1856. The Board do not bind themselves to accept the lowest or any Tender. The security of two responsible persons will be required. No Tender will be received after the time specified, and unless strictly in accordance with the printed instructions.

THOS. W. RATCLIFF, Clerk to the Board.

17th April, 1856.

TO CONTRACTORS BUILDERS AND OTHERS.

CLUN UNION.—Persons desirous to CONTRACT for MAKING IMPROVEMENTS in the DRAINAGE of the CLUN UNION WORKHOUSE PREMISES, STORAGE of RAIN WATER, in CONNECTION with the PUMP, and specifications now lying in the Clerk's office for inspection, are requested to send in Tenders, addressed to the Board of Guardians at the Workhouse, in Bishop's Castle, on or before the 7th day of MAY next—By order of the Board.

FREDERIC PARDOE, Clerk.

Bishop's Castle, March 14, 1856.

CONTRACTS.

The plans and specifications may be seen at the Offices of Mr. DENNETT, Solicitor, Clerk to the Board, No. 5, Bedford-row, Worthing, on and after MONDAY, the 14th instant, between the hours of TEN and FOUR. Duplicate forms of Tender will also be supplied, price five shillings, and full information will be given as to the works and material, by CHARLES RIDD, resident Surveyor to the Board, or by ROBERT RAWLINSON, Civil Engineer 34, Parliament-street, Westminster. Sealed Tenders (properly endorsed) are to be delivered at the Offices of Mr. DENNETT, not later than TWELVE o'clock on THURSDAY, the 1st day of MAY next. The Board do not bind themselves to accept the lowest or any Tender.—By order,

WM. HUGH DENNETT, Clerk to the Board.

Worthing, April 12 1856

TO BUILDERS AND CONTRACTORS

MIDLAND COUNTIES INSURANCE COMPANY'S OFFICES, LINCOLN.—Persons willing to CONTRACT with the Directors of the Midland Counties Insurance Company for the ERECTION of their NEW OFFICES, proposed to be built on a piece of ground situate in Silver-street and Bank-street, in the City of Lincoln, may view the drawings and specifications, and obtain other information relating thereto, on application at our Offices after MONDAY, the 14th day of APRIL next, until 23rd APRIL next, on which latter day, by TWELVE o'clock at noon, Tenders are to be delivered at the Company's present Offices, Cross-Keys, Lincoln, addressed "Tenders for Offices," &c addressed to WILLIAM ANDREW, Esq Secretary. The Directors do not pledge themselves to accept the lowest Tender.—By order of the Directors,

BELLAMY and HARDY, Architects and Surveyors, 39, Broad gate, Lincoln.

Lincoln, March 28, 1856.

THE LOCAL BOARD of HEALTH for the DISTRICT of CROYDON are desirous of receiving TENDERS for underneath-named WORKS:—

For PROVIDING and LAYING about 3,640 Feet of 12-inch STONEWARE DRAIN-PIPES in the Wellesley-road, Croydon, the depths varying from 9 to 30 feet; and for laying about 600 feet of 9-inch Pipes in connection therewith, at depths varying from 8 to 13 feet (the 9-inch pipes to be provided by the Board).

Also, separate Tenders for providing and laying about 1,250 feet of 12-inch Stoneware Drain-pipes in the Windmill-road and Whitehorse-road, Croydon, at depths varying from 11 to 16 feet.

The whole to be executed in accordance with specifications and drawings which may be seen at the Office of Mr. THOMAS COX, at the Town-hall, Croydon, on and after the 24th inst. Tenders to be sent in on the 28th inst.

By order of the Board, HENRY RICHARDS, Clerk.

Croydon, 17th April, 1856.

GREAT BARTON CHURCH, SUFFOLK.

TO BUILDERS and WOOD CARVERS.—Persons willing to TENDER for the RESTORATION of the MASONRY and RE-PLACING of the RETURNED CARVED OAK BENCHES, PULPIT, DESK, and other WORKS at the above church, may inspect the plans and specification at my Office, No. 9, Whiting-street, Bury St. Edmunds. Tenders are to be sent to the Churchwardens of Great Barton, near Bury St. Edmunds, on or before WEDNESDAY, APRIL 30th, 1856, sealed and endorsed "Tender for Work at Great Barton Church." The Churchwardens do not bind themselves to accept the lowest Tender.

Bury St. Edmunds, April 15th, 1856. JOHNSON, Architect.

AMBERGATE, NOTTINGHAM, and BOSTON and EASTERN JUNCTION RAILWAY and CANAL EXTENSION LINE, COLWICK to NOTTINGHAM.

CONTRACTS for WORKS.—Notice is hereby given that the Directors of the above Company will meet at their Offices, St. Peter's-gate, Nottingham, on MONDAY, the 28th day of APRIL instant, at ONE o'clock in the afternoon, to receive TENDERS for the following WORKS:—

CONTRACT No. 3.—For the making that part of the line commencing at the termination of Contract No. 2, on the west side of New Trent-lane, in a field numbered 18 on the Parliamentary plan, in the parish of Sneinton, in the county of Nottingham, and terminating in a field numbered 86, on the west side of Old Trent-lane, in the aforesaid parish of Sneinton, about 2 furlongs, including the earthworks, bridge, retaining walls, and other works relating thereto.

CONTRACT No. 4.—For the making that part of the line commencing on the east side of Old Trent-lane aforesaid, in a field numbered 64, in the parish of Sneinton, and terminating by a junction with the present line of the Ambergate Railway near to the crossing of the road from Colwick to Carlton. Length about 2 miles and 5 chains, including all the earthworks, bridges, culverts, railroad, and other works for completing the same.

Plans, drawings, and specification may be seen, and further particulars obtained, on application to Mr. UNDERWOOD, the Engineer, at the Offices of the said Company, on and after WEDNESDAY, the 16th day of APRIL instant. All tenders must be made upon printed forms, sealed and addressed to the Secretary. No Tender will be received after TWELVE o'clock at noon, on MONDAY, the 28th inst. day of APRIL.

By order of the Directors, JNO. GOUGH, Secretary.

Company's Offices, Nottingham, 9th April, 1856.

TO SCAVENGERS AND OTHERS

THE COMMISSIONERS of SEWERS of the CITY of LONDON hereby give Notice, that they will meet in the Guildhall of the said City, on TUESDAY, the 20th day of MAY next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for CLEANSING the WHEELS and REMOVING DUST, &c. from the houses of this City, for the term of one year from Midsummer-day next, agreeably to the provisions of a specification of which may be had upon application at this Office. The Commissioners will also at the same time receive PROPOSALS for WASHING certain of the STREETS of the said City twice a day, agreeably to a specification to be seen at this Office. The City is divided, for the purposes of these proposals, into Districts, for each of which the surveyor will be required to enter into Bond, with two approved sureties, for the due performance of his contract. The Commissioners do not pledge themselves to accept the lowest Tender, nor any, unless their terms are fully satisfactory. Tenders will be received after TWELVE o'clock on the day of treaty, nor will any Tender be received which does not contain a declaration of the Bank of England note, as an evidence that the same is made bonâ fide; which sum will be immediately returned to each person whose tender is not accepted; and will be retained in the other cases until the contract and bond are duly executed.

JOSEPH DAW, Principal Clerk.

Sewers Office, Guildhall, April 8, 1856.

OLD STOVES and RANGES.—F. EDWARDS, SON, and CO. have constantly on hand a quantity of OLD STOVES and KITCHEN RANGES, in very good condition, which are fitted up with the improvements when they first leave the Works, and which are to be sold at exceedingly low prices.—42, Poland-street, Oxford-street.

IRONMONGERY.

PFEIL AND STEDALL.

THE LARGEST STOCK AT

THE LOWEST PRICE,

5 AND 6, BROAD-STREET, BLOOMSBURY.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES Beyond the current Price of Hoop-iron.

Gauge.	In wide.	Per 100 ft.
No. 16 ..	1¼ ..	7s. 0d.
15 ..	1½ ..	7s. 6d.
15 ..	1¾ ..	8s. 0d.
16 ..	2 ..	8s. 6d.
16 ..	2½ ..	9s. 6d.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 11½ inches on both sides alternately, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming reverse claws, which have so great a bend that a direct end grain of the iron is presented longitudinally, offering most powerful and effectual resistance, and which become, when built into the brickwork, embedded in the structure, preventing the possibility of longitudinal escape, and a complete and permanent bonding together of the whole building is thereby obtained.

Patentee—FREDERICK TYERMAN, Architect, 44, Weymouth-street.

Sole Manufacturers—THOMAS PERRY and SONS, Government Contractors, Bilston.

London Depôt—EARL-STREET, BLACKFRIARS.

Apply to W. and J. FREEMAN, Millbank-street, Westminster; or GEORGE WALL, at the Quarries, near Matlock.

RAWDON-HILL STONE.—Messrs. TRICKETT and PERKIN are prepared to execute orders to any extent for their much-admired Building Stone. Depôts, where large stocks are kept, No. 3, Stone-wharf, Great-Northern Railway Station, King's-cross; Victoria Stone-wharf, Millwall, Poplar. Blocks quarried to suit cust mers for columns, cornice, landings, sters, ledgers, headstones, sills, &c. Delivered to any part by vessel or railway trucks.
"This stone when better known, must come into extensive use; I should think it exceedingly suitable for the London market."
C. L. DIESSER, F.G.S.
Address, JOHN TRICKETT, Headingley, Leeds Yorkshire; or, SAMUEL TRICKETT, Victoria-wharf, Isle of Dogs, London.
N.B. A large quantity of Foundation Landings for sale.

YORKSHIRE STONE.
GEO. VINT and BROTHERS, QUARRIES, near LEEDS,
Beg to inform Architects, Builders, Contractors, Builders, and Masons, that they can supply to any extent all kinds of YORK STONE, including Farnley, Bramley Fall, Park Spring, Robin Hood, Harehill, &c. of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Greenwich Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 346, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Quarries above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS,
BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCULES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors for Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Bailey and Sons; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

PARIS EXHIBITION. — ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of loo-tables, chiffoniers, consoles, &c.; baths, baptistries, altar-tablets, pilasters, columns, vases, pedestals, sand-boxes; water-closets; bagatelle tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slabs may be procured from a single article to the most extensive contracts, for home and abroad.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.
ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 21s. to 10 guineas. Slate Cisterns made to any size.—J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex.

GREEN SLATE.—The Green Slate produced from the Tyn-y-Werglodd Quarries, has been pronounced superior in colour, grain, and cleavage, to any hitherto used. Blue and Purple Slate of the best description.—Apply to Mr. OGILVIE, 1, Cushion-court, Old Broad-street, where samples may be seen; or to Mr. JENNINGS, Pen-y-Groes, near Carnarvon.

POLISHED SLATE BOX CHIMNEY-PIECES, beautifully moulded and trussed.—T. B. HANNAFORD has had a large consignment of the above from an extensive quarry, which having obtained under peculiar circumstances, he can offer at less than two-thirds the usual prices. For Bangor Slate Cisterns, and other Slab-work, Roofing Slates or covering, his tariff (which can be had on application) will be found to command universal attention.—Trevalga-wharf, Ratcliffe-cross

GROUND FLINT AND CORNISH STONE, UNADULTERATED, WILCOX & CO. FLINT MILLS, MILLWALL, POPLAR.

BASTERNE BITUMEN.—The continual failures occurring in Asphalte and Bitumen Works, through spurious and worthless materials being used, has induced H. BURGESS to accept the AGENCY for the BASTERNE BITUMEN, that excellent article which has proved itself, after so many years' trial, to be superior to any other now in use, and the only article thoroughly adapted for roofs, terraces, &c as it is not affected by the changes of temperature such works are invariably subject to. The pavement of Trafalgar-square, London, has been laid many years with it, and can be viewed at all times.—Estimates given, and works executed, in all parts of the country, by H. BURGESS, Clough-bridge, Rotherhithe, London.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations, FROM 2s. 9d. PER SQUARE YARD. Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it. Apply to JOHN PILKINGTON, Poloneeau and Limmer Asphalte Office, Monument chambers, 14, Fish-street-hill, London. N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

O. McCARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, White friars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.

W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 21 Wharf, Harrow-road, to 9, North Wharf-road, Paddington, have now on sale good Garden and Screened Gravel. For terms, &c. apply at the Wharf. Contractors supplied to any extent.

FURTHER REDUCTION of PRICES.—SAMUEL PUTNEY invites the attention of buyers to his large and well-selected Stock of the various descriptions of Deals, commencing at this following low prices:—

Yellow Deals, from	£20	0 per 120
Spruce ditto, from	18	0 "
Yellow Battens	10	10 "
Dry Pine Plank, from	21	0 "

Prepared Flooring, &c. at equally low prices. A list forwarded on receipt of a postage stamp.—N.B. All orders goods delivered within two miles free of cartage.—Borough-road, Southwark, and Elm-street, Gray's-inn lane.

NOTICE.—To BUILDERS, CONTRACTORS, and OTHERS.—WILLIAM MARSHALL begs to inform the trade generally, that he has about 10,000 feet of well-seasoned WAINSCOT, in all thicknesses, and at the lowest cash price. Also a very fine Stock of WALNUT, ROSEWOOD, and MAHOGANY, in plank, board, and veneer, at his Timber-yard, Vincent-street, Old-street-road.

EDWARD SIMMS begs to inform Builders and the trade, that he has now on hand at his manufactory the first of its kind ever established, a large assortment of PREPARED FLOORS and MATCH BOARDING, seasoned, and ready for use, from ¼-inch to 1½-inches thick, in Wainscot, Yellow Deal, Oak, or Pitch Pine. Also Deals, in all thicknesses. Slating Battens, Pantile Laths, Oak Cills, Plank, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application.—Address, E. SIMMS, Flooring Manufactory, Wilton-road, Pimlico; and Sawing, Planing, and Moulding Mills, King's-road, Chelsea.

COUNTER TOPS.—R. VIGERS, TIMBER MERCHANT, Kennington, Surrey, solicits the attention of builders and shop-fitters to his carefully seasoned MAHOGANY, suitable for Counter Tops, and to his seasoned Materials for builders, cabinet and blind makers, &c. Delivered, cartage free, to any of the London railway stations, or within three miles from Kennington Church.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry Flooring at low prices.—Southwark-bridge Wharf, Bankside.

TO BUILDERS, CARPENTERS, &c.

SAMUEL CROWHURST, Jun. begs to call the attention of Builders, Cabinetmakers, &c. to his Stock of seasoned and well-assorted Timber Goods, Deals, and Mahogany, in logs, Planks, Boards, &c. at prices which cannot be found equal if not less than any advertised. Country Builders supplied on the most liberal terms.—Timber-yard, Hanover-street, Walworth; and Francis-street, Newington, near the Church

MACHINE CARVING WORKS (Patent). Ecclesiastical and every other description of CARVING. A magnificent Gothic Screen, Carved Glass Frame, and other specimens. Tables, Chairs, Lecterns, &c. Designs and estimates at the Works, Belvedere-road, Lambeth, foot of Hungerford-bridge.

ACORN TIMBER WHARF and SAW MILLS, CANAL BRIDGE, OLD KENT-ROAD, LONDON. A Monthly Price Current forwarded on application. RICHARD MAY, Proprietor.

SEASONED FLOORING.—GEO. NOKES and CO (late Archbutt and Atkinson), beg to acquaint builders and the trade, that they have a large STOCK of DRY WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at the following reduced prices, for cash:—

¾ inch White, 15s. 6d. per square.			¾ inch Yellow, 1os. per square.		
1 ditto	15s.	"	1 ditto	16s. 6d.	"
1 ditto	18s.	"	1 ditto	20s.	"

Laths, 36s. per load. Also Timber, Deals, Planks, &c. Mouldings by machinery in very great variety.

ST. PANCRAS SAW-MILLS, Cambridge-street, Old St. Pancras-road.

GEORGE SMITH, TIMBER-MERCHANT, LONDON.—Address to No 18, Binfield-road, Clapham-road, Stockwell; or Jamaica Coffee-house, City. Goods delivered from the Docks. PREPARED FLOORING, &c. from the Saw-mills. Goods in Bond for Exportation. N.B. A large Stock of Dry Prepared Flooring, &c. from Two to Four Years Old.

TO TIMBER MERCHANTS.—WANTED, some prime clean 1¼-inch YELLOW BATTEN FLOORING, or 2¼-inch Yellow Battens capable of producing the same.—Particulars to be sent to Mr. WELCHMAN, 33, Rutland-gate, Hyde-park.

GREAT REDUCTION.—Yellow Deals, 3s. 6d.; Spruce, 3s.; Pine Plank, 3s. 9d.; 2¾ Yellow Battens, 12l. 10s. per 120 12 feet; Mahogany, 6d. per foot. Cartage free to any part of town.—T. FORMAN, 1, Walnut-tree-walk, Lambeth-walk.

METROPOLITAN PATENT WOOD PAVING.—WILLIAM BASTABLE and CO. beg to state that they are prepared to execute orders for Paving Railway Stations, Workshop, Wharfs, Gateways, Porticoes, Stables, Forges, Nave and Aisle of Churches, and School-rooms. Office, Belgrave Works, Thames Bank, Pimlico.

MOULDINGS BY MACHINERY. Capping, Sash Bars, Beads, &c. to any Design, carefully packed and sent to all parts of the Country.—A Pattern List sent on application to E. SIMMS, SAWING, PLANING, AND MOULDING MILLS, KING'S ROAD, CHELSEA, AND WILTON-ROAD, PIMLICO.

TO BUILDERS, COACH-MAKERS, DECORATORS, HOUSE-PAINTERS, &c. &c.

CHAS. W. NOBLE (late A. and F. Strong), VARNISH MANUFACTURER, continues to supply every description of Varnishes and Colours, of the very best quality, and at the lowest prices. The Varnishes manufactured by Noble have stood the test of nearly a century, made of pure materials, insuring that desideratum in varnish—body, polish, and finish,—for which his predecessors have been so long and so far famed.

*** Methylated Spirit Varnishes, Polishes, &c.; also Noble's Enamel Paper Varnish, for decorators, &c. Coach-painters' and Lithographic Colours.

N.B.—Merchants and shippers will find an advantage in exporting Noble's Varnishes. Manufactory—MITCHAM, Surrey. Wholesale and Retail Warehouse—117, LONG ACRE, London.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for the trade, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

TO PAINTERS, BUILDERS, &c.—LOVETT, FRANK, and SON, 14, Borough, London-bridge, opposite the Brighton and South-Eastern Railway Stations, quote their present prices for cash:—Linseed oil, 2s. 8d.; boiled, 3s.; turpentine, 2s. 8d.; oak varnish, 7s. 6d. per gallon; genuine white lead, 33s.; seconds, ditto, 31s.; best town glue, 43s. per cwt.; colours, brushes, &c equally low.

TO TIMBER MERCHANTS and OTHERS. The Proprietors of Lett's Wharf, Commercial-road, Lambeth, offer the most convenient Wharf for land no all sorts of English Timber, &c. Spacious Dry and Drawing Docks, 30 and 10-ton Cranes, Sawpits for converting Timber, &c. Freights paid on delivery.—Apply to G. NOKES and CO. as above.

LETT'S WHARF PATENT SAWING, PLANING, and VENEER-CUTTING MILLS, Commercial-road, Lambeth.—The proprietors beg to announce to the trade that they have completed their extensive arrangements, and will be happy to execute all orders intrusted to their care with despatch and punctuality. N.B. All goods sawn at these mills fetched and delivered free of charge.

TIMBER SAWING-MILLS, Belvedere-road, Lambeth.—ROBINSON and BARTRAM respectfully inform their friends in the Timber and Building Trades, that they have now completed their New Mill for Sawing building and other Timber, and will be glad to receive their favours in this department of sawing. Full particulars will be forwarded on application, per post or otherwise. Timber up to 55 feet long can be cut at these mills.—N.B. A powerful Crane for landing timber on to carriages, at 1s. 3d. per load.

NEW KENT-ROAD SAW-MILLS, half-way between Surrey Docks and West-end.—Messrs. TAYLOR and BUCKLEY beg to inform Timber Merchants, Builders, and Others, that a wing made large additions to their machinery, they are in a position to execute orders on the shortest notice. Extensive premises for piling goods. List of prices will be forwarded upon application.

MANAGER—John Hamilton Clement, esq. Gloucester-terrace, Kensington.
Temporary Offices, 4, Union-court, Old Broad-street, London.

This Company proposes to work Wagstaffe and Perkins' Patent for extracting and separating the various metals from ores by chemical agency.

The Company's process gives the metals separately as a small cost; while the sulphur, arsenic, and other valuable properties are preserved for commercial purposes.

With a small outlay of capital, for the erection of model works; say 5,000l. for illustration and reducing English and Foreign ores at a royalty per ton, a large income will be produced. For example, offers, after testing the process, have been made from foreign mines, to consign 3,000 tons of copper ore annually, and to pay 8l. per ton for reduction, which, after deducting say 1,000l. for expenses, would leave 4,000l. profit to the Company, increasing the value of the metal; also giving the other properties to the consignee, and about 1,000 tons of extra sulphuric acid. Thus giving the Shareholders 80 per cent. on their capital, independent of the main and vast revenue which will accrue, without outlay, by granting licences to mining companies, for reducing ores at their mines.

A portion of the capital is already subscribed for, and application for Shares must be accompanied with the bankers' receipt for the deposit of 10s. per Share, and may be addressed to the Solicitor or Manager, from whom detailed prospectuses may be obtained.

METROPOLITAN LOAN COMPANY, Established 1839.
1, CRAVEN-STREET, STRAND, LONDON.
Loans are advanced in amounts varying from 10l. 10s. to 100l. repayable weekly or otherwise, as may be agreed upon, at a discount of 3l. per cent. for twenty-five weeks, and for 50 weeks at 5 per cent.—Forms may be had, price 2d.; if by post, three postage stamps to be enclosed. ROBERT NORTON, Secretary.

LOANS from 25l. to 1,000l. upon approved personal or other security, repayable by easy instalments, extending over any period not exceeding fifty months, are readily OBTAINABLE from the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules 6d. each copy. 3s. per page.
CHARLES JAMES THICKE, Resident Secretary.

TO ENGINEERS, MACHINE MAKERS, AND OTHERS.
CHARLES MACINTOSH and CO. Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all degrees of elasticity, recommend this material as capable of sustaining the action of hot or cold water, gas, steam, acids and grease. It is used extensively for valves in marine and land engines, railway buffers and springs, washers for pipe joints, hose and tubing; also for gas-holders, acid pumps, alkali cisterns, &c. &c. Articles, moulded or otherwise, made to any size or figure.—Address, 3, Cannon-street West, London; and Cambridge-street, Manchester.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 60 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.

No.	1 quality, inches diameter, and price per yard.						
¾	1	1¼	1½	2	2½	3	3 in
8d.	11d.	1s.1d.	1s.3d.	1s.5d.	1s.7d.	1s.9d.	2s. 2s.3d. 2s.6d. 2s.9d.

Super-extra stout quality.

2	2½	3	3½	4	5 inches
2s.	2s.3d.	2s.6d.	2s.9d.	3s.	3s. per yard.

No. 0. A cheaper hose, to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.

1	1¼	1½	2	2½	3 inches
9d.	10d.	11d.	1s.	1s.3d.	1s.6d. per yard.

The hose is Burnettized at an extra charge of 3d. per yard. Union Joints, Branch Pipes, and Jet Cocks also supplied.

DURABILITY of GUTTA PERCHA TUBING. Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter: FROM SIR RAYMOND JARVIS, Bart., YENTNOR, ISLE of WIGHT. —Second Testimonial.—"March 20th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pumps, which I can state, with much satisfaction, it answers perfectly. Many Builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

TO ENGINEERS, MILL-OWNERS, &c.
N. Woolwich Elastic steam-packing (Canvas and India-rubber), at 1s. 4½d. per lb.

S. W. SILVER and CO. INDIA-RUBBER WORKS, North Woolwich (opposite H. M.'s Dockyards), having considerably extended their manufacture in order to meet the daily increasing demand upon them for their valuable and durable article, are enabled to offer the very best material at the reduced price of 1s. 4½d. per lb. delivered in London, for sheet and rope.

Testimonials may be seen at S. W. SILVER and CO.'s Warehouses, Nos. 4 and 4, Bishopsgate-street (opposite London Tavern), where orders for Steam Packing, also Buffer Springs, Cramp Clacks, and the various India-rubber appliances, will meet with prompt attention.

CAUTION.—S. W. S. and Co. have found it necessary to stamp all their manufacture, thus—"S. W. SILVER and CO. WORKS, NORTH WOOLWICH."

BARROWS! BARROWS!—Forty new Navvy Barrows, 1½ cash, delivered to any of the Railway Stations free.—Address, JOHN BARNES, Wheelwright, 24, Pleasant-row, Pentonville-hill, London, near the Great Northern Railway Station. For cash.

WINDOW-BLINDS.—J. FULLER, Manufacturer, 20, Charlotte-street, Blackfriars-road. Established, 1830.—Venetian Blinds, from 10s. each, or 8d. per foot; Wire ditto, 7s. each, or 1s. 9d. per foot; Holland ditto, from 5s. each, or 5d. per foot. Every other description of Blinds equally low, warranted of the best manufacture. Discount to Builders and the Trade. Fixed complete.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 3s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 3s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

COMPLETION OF THE BUTTERFLIES.
On the 30th instant, price Twopence each No III. of

A MANUAL of BRITISH BUTTERFLIES and MOTHS
By H. T. STAINTON,
Editor of "The Entomologist's Annual"

This work will contain descriptions of all the British Species, with popular remarks where to find them and how to know them, and will be illustrated with numerous wood cuts. To be completed in about Thirty Monthly Numbers.
London: JOHN VAN VOORST, 1, Paternoster-row; and to be had of all Booksellers and News Agents

This day, Vols. I and II. octavo, 32s.

HISTORY of ENGLAND, from the Fall of Wolsey to the Death of Elizabeth
By JAMES ANTHONY FROUDE, M.A. late Fellow of Exeter College, Oxford
London: JOHN W. PARKER and SON, West Strand.

Just published, price 1s. 6d.

REPORT on the EXAMINATION for APPOINTMENTS in the ROYAL ARTILLERY and PRACTICAL CLASS of the ROYAL MILITARY ACADEMY at WOOLWICH, held at Barlington House, London, on the 21st of January, 1856 with Copies of the Examination Papers.
London: HARRISON, 59, Pall mall. 1856.

COMPLETION OF THE TRAVELLER'S LIBRARY.
On the 30th inst. in 16mo price One Shilling,

AULDJO'S ASCENT of MONT BLANC.
A New Edition with Illustrations; forming Part 100 of the "Traveller's Library."
*** The "Traveller's Library" will be completed in Two more Parts, as follows:—
On June 1, Parts 101 and 102, "The Wit and Wisdom of Thomas Fuller" forming Vol. L. and completing the Series.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, royal 8vo price 3s. cloth.

THE SIXTEENTH ANNUAL REPORT of the REGISTRAR GENERAL of BIRTHS, DEATHS, and MARRIAGES, in ENGLAND.
London: Published by HER MAJESTY'S STATIONERY OFFICE by Messrs. LONGMAN, BROWN, GREEN, and LONGMANS
Of whom the previous Reports (from the First to the Fifteenth inclusive, may still be had.

KIRBY AND SPENCE'S ENTOMOLOGY. SEVENTH AND CHEAPER EDITION

On Friday next, in One closely-printed Volume of 680 pages, crown 8vo. price 6s. cloth

INTRODUCTION to ENTOMOLOGY; or, Elements of the Natural History of Insects, comprising an Account of Noxious and Useful Insects; of their Metamorphoses, Food, Stratagems Societies, Motions, Hybernation, Instinct, &c. By WILLIAM KIRBY, M.A. F.R.S. Rector of Barham; and WILLIAM SPENCE, Esq. F.R.S. F.L.S.

Seventh Edition, with an Appendix relative to the Origin and Progress of the Work.

*** This work is now published at one-sixth of the price of the sixth edition, so as to bring it within reach of all desirous of becoming acquainted with the History of Insects and thus carrying out more effectually the object of the authors,—that of introducing others to a branch of science which they had found so delightful. To this compressed by a smaller type into one volume, it contains very little of the sixth edition, which included much non-matter not in the two preceding ones, and, to render the work more complete, one of its original portions is furnished by Mr. Spence to the Life of Mr. Kirby, by Mr. Freeman, L.L. with his permission, give as an Appendix.
London: LONGMAN, BROWN, GREEN, and LONGMANS

MANCHESTER EXHIBITION of PHOTOGRAPHS.—The FIRST ANNUAL EXHIBITION will open on the 1st of MAY, at the Pine Art Gallery, Bridge-street All contributions intended for exhibition must be sent not later than the 19th of APRIL Also all communications from amateurs or artists, not having had a circular, must be addressed to H. WHAITE, as above.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth, near Astley's Theatre, begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found somewhat lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices An illustrated price-list will be immediately forwarded, free, on application.

N.B. A few New and Second-hand Levels and Theodolites always for Sale

CRYSTAL PALACE.—TO ARTISTS.—In reply to the numerous inquiries relative to the PICTURE-GALLERY, which have been received from artists and others, during the Season in Paris and Belgium, Mr. MOGFORD begs to announce that full particulars will be immediately issued.
Crystal Palace, April 14, 1856.

CRYSTAL PALACE.—CERAMIC COURT. The Directors beg to announce that an Exhibition, illustrating the Art of Pottery, is to be opened in this Court, under the superintendence of Mr. THOMAS BATTAM, F.S.A., in one of the Galleries, during the months of May and June, and to include Specimens of the various kinds of Pottery and Porcelain from the earliest dates, 2 Specimens of the Manufactures of the present day, British and Foreign, including those for which prizes were awarded at the Paris Exhibition, as well as other important works, executed expressly for this occasion Those of the latter class, intended for the Exhibition, and applications for space in the Court, are requested to be addressed to the Secretary, by whom full particulars will be communicated. It is intended to open the Ceramic Court early in the season.—By order, G. GROVE, Secretary.

TO ARCHITECTS.

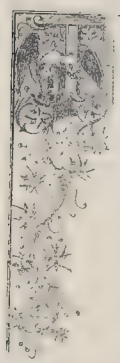
EXHIBITION and COMPETITION DRAWINGS, coloured or tinted, and superior LITHOGRAPHY, in its various branches, executed by Mr. T. J. RAWLINS (Author of Elementary Drawing Copies), adopted at Marlborough House; Outlines of Sculpture; Modern Architecture, &c. &c. University-street, Tottenham-court-road, London.

QUANTITIES LITHOGRAPHED to any extent on the shortest notice, and on the most reasonable terms Scale of charges sent free by post. ARTHUR ROSS DANGERFIELD, Architectural Engineering, and Mechanical Lithographers, Draughtsmen, and Printers, 22, Bedford-street, Covent-garden, London.

TO ARCHITECTS and SURVEYORS.—BUILDERS' QUANTITIES printed with accuracy and promptness, and at nearly HALF the PRICE of LITHOGRAPHY, by WARREN, HALL, and Co. Caxton Steam Printing Offices, 10, Cambridge-terrace, Dalston, London.
Estimates given when required.

TO ARCHITECTS.

AN ARCHITECTURAL COLOURIST of experience engages to COLOUR COMPETITION and other DRAWINGS on reasonable terms; perspectives put in; Drawings framed and glazed for gentlemen in the country, and sent by post Specimens of colouring may be seen Address, C. L. BEETH, LANE, 1, Millman-street Bedford row



DRAWING, &c.—One Guinea per Quarter. At this Establishment Pupils are thoroughly instructed in Architectural, Civil Engineering, and such other Drawing as may be required, Perspective, Sciography, Water-colour Drawing; Taking out Quantities, Measuring, Estimating, &c. &c. Terms, One Guinea per Quarter.—For further particulars, &c. apply to Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. Others, 21, Guildford-street, Russell-square.

DRAWING CLASSES.—24, Guildford-St. For Architects, Builders, and Engineers' Pupils, Assistants, Clerks of Works, Foremen, Bricklayers, Masons, Carpenters, Joiners, Mechanics, and Machinists in general. Measuring, Taking out Quantities, Abstracts, Estimating, Architectural Colouring, Shading, &c. &c. Terms, One Guinea per Quarter.—For prospectuses, &c. apply to Messrs HYDE, SMITH, and LEWIS at the Offices.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural, Civil Engineering, and Mechanical Drawing; Colouring, Shading, Sketching; Ornamental and Water-Colour Drawing; Perspective, Isometrical, and Geometrical Drawing, Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, Measuring and Valuing Builders' Work, &c &c Terms: Day Pupils, Three Guineas per Quarter; Evening Pupils to commence per Quarter. There are no extras, the terms including the use of the above, with the use of Drawing Boards, T squares, Pians, Drawings, Models, &c. Prospectuses and full particulars may be had at the Offices, 24, Guildford-street, Russell-square.

The Builder.

Vol. XIV.—No. 689.

JUDGING from the expressions of those who were assembled at the Architectural Museum on the 8th inst. to assist at the presentation of the prizes for stone and wood carving, it would seem that the importance of enabling the workman to individualize himself is becoming more generally felt than was, even lately, the case, and that there is reason to hope he will gradually obtain those opportunities of cultivating his mind and his eye which have long been possessed by the workmen of foreign countries, and have given them immense advantages. "If we would elevate the English workman," says Mr. M. D. Wyatt, in his lately published "Report on Furniture and Decoration in the late Paris Universal Exhibition" (re-urging opinions we have advocated for years), "we must recognize some other stimulant to his energies than beer; we must provide museums for him, where, as at Marlborough House, he may see what others have done before him, and better than him, in his own trade; we must get some free libraries, where he may be able to go and improve himself; we must put some better and more ideal monuments than we already have into our public streets, spending more money upon their art, and less upon the quantity of materials of which they are made; we must, in short, educate his eye, and, through his eye, his mind, by giving him access to the best models of fine and industrial art. Providing libraries to which access can be obtained during portions of the day only by payment, or by making previous formal application, and museums and galleries open from ten till four three days in the week, is a complete mockery to the artizan. If such places cannot be opened on a Sunday, either some arrangements must be made for lighting them up in the evenings, and opening them till dark in the summer, or we must be content with the very limited development of his manufacturing capabilities which now falls to the lot of the British workman."

Our artizans are as open to instruction and cultivation as those of other countries—as eager for both—and will make as good a return for the pains bestowed; but they have not had fair play: acquirement and improvement have been rendered impossible, and great wonder has been expressed that they had not acquired. In the Report to which we have just now referred,—a report full of knowledge and sound criticism, and which we cannot too strongly recommend to all our readers,*—where, speaking of the remarkable cabinet of the style of Louis XIV. manufactured by Messrs. Jackson and Graham, and rewarded with a gold medal of honour, the reporter gives a list of those who have co-operated in its execution,—and how does this list begin? Thus:—

"*Designer.*—M. Eugene Prignot, who has now been principal designer to the firm for six years.

Modellers.—M. Carrier, who modelled the caryatides; M. Protat, who modelled the figures on the top of the glass frame, and some other portions; M. Phenix, who modelled nearly the whole of the flowers and ornaments." And one of the carvers is Claudio Colombo. Under the circumstances, it may be "a subject for congratulation, rather than for carping or regret, that foreigners of such talent as is possessed by Messrs. Prignot, Carrier, Protat, Phenix, and Colombo should be at work amongst us;" but surely it is none that manufacturers should be obliged to go abroad for art-workmen, as they continue to assert they are.

Again, when certain plaques of porcelain were required, by the manufacturers last named, to be painted with figures and amorini, for the furniture they were preparing, it was not thought possible to have them successfully painted on the china in England, so the slabs were sent to the royal manufactory at Sèvres. There, however, the artists were so overtaxed to prepare for their own display in the Great Exhibition, that, after keeping the slabs three months, they were at a late period returned untouched. It is true, in this dilemma, they were sent to Mr. Minton, of Stoke-upon-Trent, who had engaged four students, partly educated in the art schools at the Potteries, and partly at Marlborough House, by one of whom, Mr. Grey, these plaques were painted in a style of excellence that leaves little room for regret that they were returned from Sèvres: but even then they were designed by French artists!

Surely this is all very disgraceful to our rulers;—not exactly to those of the present day, because machinery is now in motion which is gradually putting us into a better position; but to those who went before.

Even now, however, they show strangely at times the opinion they entertain of the value of art in manufacture. We will take one example, and that shall be the huge building of iron and glass which is being erected at this moment for *the Royal Commissioners of* 1851, on the Kensington Gore estate, and is intended for the exhibition of the Marlborough House collections—the Trade Collection, presented to the Royal Commission by various exhibitors, at the close of the Great Exhibition of 1851; the Patent Museum; the Educational Museum; and the Museum of Animal Produce, formed at the Society of Arts, in conjunction with the Royal Commission. It is 266 feet long, 126 feet wide, and is in three equal spans, covered by three elliptical roofs, all at the same height from the ground, like three huge boilers placed side by side. The shell is formed of flat iron uprights, filled in with boarding. Messrs. Young and Co. who are the contractors for the works, claim in the newspapers the exclusive credit of the design: Sir William Cubitt overlooks them, and there is a resident engineer acting on behalf of the commissioners. Of the construction we say nothing, we shall give our readers some sections and a plan in another number; nor of the effect of the interior just now, and the probable want of light in great part of it: our immediate object is to direct the attention of the commissioners, before it be too late, to the exterior, which, if carried out in accordance with the drawing, will discredit all who are concerned in it, and be an eyesore and injury, so long as it remains. Its ugliness is unmitigated: never was a beautiful sward, where the daisies blossom and trees and shrubs put forth their leaves and branches and flowers in forms of beauty unapproachable by man, so vilely disfigured. We know nothing with which to compare it. Railway sheds and locomotive depôts have often some little bit of art or taste about them, but here there is nothing: up one side and down the other, all is blank and offensive. No squatter in the Back-woods, no New Zealand savage, would erect a structure so utterly and indefensibly ugly. If the Marlborough House authorities retain their Chamber of Horrors,—their examples of "what to avoid," when they get into their new quarters,—Mr. Cole's first act must be to have a model made of this Museum itself. Seriously and earnestly, we do hope that the Royal Commissioners will call in some artist to their aid, and endeavour to improve the appearance of this ugly result of the '51 Exhibition, whether it is to be called "temporary" or not.

Our Government generally, now that peace is restored, must turn their attention to its arts, and should grudge no money, spare no pains, in the work of education and refinement. It will pay even financially. Ask our Manchester people what they expend in France for patterns: learn the statistics of the Paris trade in paper-hangings, bronzes, and jewellery. Why, it has been shown that last year Paris alone occupied nearly 30,000 workmen in cabinet-making, and produced work worth about three and a quarter millions sterling, and that about one-third of all that is made in France is for exportation. Many things go to produce superiority. The workmen of France in a department of manufactures where they beat us industrially, "are intelligent, quick-sighted, clean-handed, and for the most part they work in light, cheerful ateliers, with flowers, or casts, or engravings about them. The value of such premises, commercially, says the reporter, is not yet half sufficiently appreciated in this country."

It is not, indeed. "Don't talk such nonsense to me," says many a Mr. Bull even now: "flowers and engravings for workmen, indeed! why, *I* do without flowers and engravings—never think of having such things; and why should they have them?" Fortunately, Mr. Bull, some of your children are wiser than you, and are beginning to see the Usefulness of the Beautiful.

Let us go back to the meeting, which has induced these observations.

It was the first meeting for the present session, and was held on the evening of Monday, the 7th instant, at the Museum in Canon-row, Westminster, for the special purpose of presenting the prizes for carving in stone and wood to artist-workmen, announced last year. These are the first prizes which have been offered in connection with this Institution, and great interest was evinced on the occasion of their presentation. The meeting was very fully attended, and many ladies were present The chair was occupied by Professor Cockerell, R.A. who was supported by Mr. A. B. Beresford Hope, Mr. Ruskin, Mr. G. G. Scott, Mr. Clutton, Sir Walter James, Mr. Hardwick, Mr. Clarke, Mr. Christian, Mr. Raphael Brandon, Mr. Burges, Rev. Dr. Biber, Rev. Charles Boutell, &c. &c. The first prize, for stone carving, the sum of five guineas, being the gift of Mr. Ruskin, was by that gentleman presented, with an appropriate address, to Mr. William Sandilands. The subject which had been named for competition was a capital, to be enriched with foliage, figures, flowers, and animals. Mr. Sandilands' design exhibited originality, coupled with singular spirit and freedom of execution. The first prize, for wood carving, also the sum of five guineas, the gift of the Museum Committee, was presented by the chairman to Mr. John Baldwin, for a wreath of holly, boldly cut in relief upon a panel. The chairman also presented second prizes, contributed by a member of the committee, to Messrs. George Galpin and William Forsyth, for some very clever carving in stone and wood. It was announced that attested certificates of their having severally received these prizes would be also presented by the committee to the successful candidates.

The important position now occupied by the Architectural Museum, its special value to

* Printed by Geo. E. Eyre and William Spottiswoode, for her Majesty's Stationery Office; together with Reports on the General Management by Henry Cole, C.B previously mentioned, on the Fine Arts Arrangements, by R. Redgrave, R.A.; on the Industrial Arrangements, by Richard Thompson; on Birmingham Manufactures, by George Wallis; a very elaborate series of experiments on various Colonial Woods, by Captain Fowke, showing some remarkable results, &c. &c. Mr. Wallis's Report contains much that deserves consideration.

architectural workmen and students, and the great advantages to be derived from the system of offering prizes for competition in works in stone, wood, and metal, were set forth in a series of able addresses from the chairman, Mr. G. G. Scott, Mr. A. B. Beresford Hope, Sir Walter James, Rev. Dr. Biber, and Mr. Digby Wyatt.

Mr. Beresford Hope said he felt a peculiar pleasure and interest in then addressing the meeting, because he had been present at the meeting a year before, at which the idea of such prizes for artizans was first started, and that was itself the proposal of a working man, thrown out at the meeting in question, and cheerfully and immediately taken up by the committee of the museum. Thanks to the liberality of the committee, of Mr. Ruskin, and of Mr. Godwin, the idea was thrown into a tangible form, and the present gathering now saw the results, in the admirable and spirited carvings before it. The speaker then dilated upon the working men's position rightly understood being in reality that of the artist within the limits of his proper employment. The meeting had heard some true observations that evening upon the foolishness of spending money on ugly nicknacks—whose next possessor would probably sell them,—rather than on permanent works of artistic beauty. This was undoubted: but, on the other hand, it would be a great mistake to neglect design in any accessory of furniture. The same feeling of beauty which leads to the cultivation of architectural art, leads equally to gracefulness of form being sought in all objects of manufacture; and if it were neglected in these, it was impossible to expect it in the former. Services of plate are necessities of the time, and, therefore, they may just as well be graceful in their design. So treated, they will not cost more than if they were clumsy and ungainly. In fact, the same rule applied to such things which existed in regard to houses, and so on, all of which might in the course of things probably come into the market sooner or later; but yet a house did not the sooner slip out of its owner's hands because it was the work of a Cockerell or a Scott, than because it was one of those in Baker-street or Upper Harley-street. He had a few days before been visiting Minton's manufactory, and had observed the carefulness with which every leaf was modelled after nature in his porcelain. So extensive was the field into which the artisan might carry the art feeling, if rightly directed. Of the natural capacity for art which existed in many minds, he had a striking instance to show that night, in a miniature group in alabaster (which he exhibited), being a copy of Mr. Lough's "Mourners," executed by a lad of eighteen, in a remote village in Derbyshire, who had never seen a work of art in his life, and had only a knife and two small chisels to work it with. For his model the youth had only a wretched woodcut of the original in a periodical, which merely gave one side, so that he had to supply the other from his own imagination. In conclusion, he had only to say, "Forwards, and God speed them."

Mr. Digby Wyatt observed that the monuments of ancient days, both classical and mediæval, had derived much of their beauty, and of the peculiar technical excellence manifested in their construction, from the concentration in one individual of the capacities of the designer and the chief worker,—the real "magister operum," or "master of the works." In periods when one type of form alone was dominant, and when each generation was content to tread with but little deviation in the footsteps of its predecessor, such a harmonious union of qualities was both possible and indispensable to success. In the present day the case was quite different,—the identity of the workman was, to a great extent, lost sight of in the general arrangements made with contractors and builders; while the necessity of studying how to supply the wants, real and factitious, of a complicated social and intellectual system, left the architect but little time to himself to become technically or practically informed, either as to the details of skilful workmanship, or the individual capabilities of those cultivated artisans who had qualified themselves to occupy a neutral ground between the domain of the mechanic and that of the regularly educated artist. Mr. Wyatt hailed, therefore, with great pleasure, and with confident anticipations of present and future usefulness, the tendency in which the council of the Architectural Museum were so zealously moving. In drawing together, and, as it were, into one focus, the employer, the designer, and the producer, they were, he conceived, serving the best interests of art, and supplying the best antidote that could be devised for the estrangement of classes, ends, and aims, incident to the adoption of that rigid division of labour no doubt to a great extent indispensable to our present national, social, and commercial position. Much as the architect no doubt had to learn from the workman, the latter was no less likely to benefit from increased opportunities of contact. Nothing was more painful than to see labour thrown away: it was like human life squandered; and yet how constantly did they recognise the skill of the workman misapplied; nature imitated conventionally where a more truthful rendering would have been far more appropriate and beautiful; or the most graceful imitation of her exquisite forms spoilt for want of a little knowledge of the laws of symmetrical arrangement, and the proper introduction of those architectural forms which gave order and regularity to what, without them, could but assume a vague and purposeless aspect.

The speaker drew attention to the excellent working of the system adopted for developing the powers of the workman in the Government drawing-school in the parish of St. Martin, probably the most important locality in Paris. In that district the artists and "fabricants" of various trades had elected themselves into committees, the duty of which was to attend by turns in the evenings, and to point out both to the masters of the school, and to the students frequenting it, the especial requirements they desired to see supplied by the course of study they might be enabled to point out. Thus, a master who might allow his apprentices to attend the school of an evening, would have an opportunity of educating them as it were to his hand: thus the artist or designer would know exactly whom to point out as most eligible to carry into execution any composition he might make; and thus the workman would rise in his own self-respect, and in the esteem of his employer, while at the same time he would learn to understand the business, on his perfection in the higher branches of which his ultimate success in life would obviously mainly depend. The consequences of such a practice of technical instruction, and such a drawing together of master, artist, and workman, were excellently illustrated in the late Exposition at Paris, of which, no doubt, many then present had been careful students. It must have been impossible for any such to avoid recognising the fact, that technical dexterity had never reached a higher pitch than it had now attained; and that if our productions were not all that they should be, the blame could not, with justice, be saddled upon the shoulders of the operative. Whenever his intellectual necessities and cravings should be rightly understood and fittingly supplied in this country, and not until then, could a just and rational hope be entertained, that a pure and self-consistent style of art would be inaugurated amongst us.

The Rev. Charles Boutell, as acting chairman of the committee, then read the list of the lectures to be delivered during the present session, and he also announced that a prize of ten guineas would be given for stone carving by Mr. Ruskin, and a similar prize of ten guineas for wrought iron by the committee of the museum, at the opening of the first session of next year.

An art-workman (Mr. Ash, a worker in brass and iron) then spoke rather strongly against the form in which the subject for the prize for wrought iron was set forth. He reprobated strongly its being described as in the style of the latter part of the thirteenth century, as tending to fetter the invention of the competitors. He said that Mr. Ruskin had made *his* a subject of the nineteenth century by prescribing subjects illustrative of the Crimean war, and had also stated that possibly the works of the competitors might be used in conjunction as the monument of some of those who had fallen in that war, and he (Mr. Ash) suggested that the iron screen might form a grille round such a monument, but if so, it should be a work, not of the thirteenth, but of the nineteenth century.

Mr. Hope then explained what he imagined was the meaning of the committee in this condition, viz. that as the end of the thirteenth century was preeminently a period in which ornamental wrought-iron work had been practised successfully, and on true principles, this was chosen as giving merely a guiding type, but that the work should be (subject to such a leading idea) worked out by reference to nature, whose types are happily the same in the nineteenth as in the thirteenth century, and that it should practically be a work purely of the nineteenth century, though reference had, to keep the competitors to a leading idea, been made to the period of the best specimens of ancient work of the same kind. Sir Walter James made some remarks on the same subject, and Mr. Ruskin made an interesting speech on the influence of the works of former ages on those of our own.

Mr. Cockerell also made some remarks on *authority* in matters of art, and its great importance, so long as we remained without a distinctive style of our own; but added, that we are on the look out for the advent of that great genius who is to generate such a style.

Mr. Digby Wyatt, following on the same subject, observed, that the barest allusion to an original "art of the nineteenth century" was a trumpet call to those who, like himself, lived in the day dream that such a consummation might some day be realised. He confessed, however, that while he recognised, in the very discords which raged between the partizans of ancient styles, and more especially in the infinite multiplication around us through photography, engraving, casting, &c. of models of every conceivable kind, the advent of an eclectic style, he could scarcely yet anticipate an original one. It was a popular fallacy to imagine that any one, though even a heaven-born genius, could awaken humanity to new life. Great revolutions in liberty, letters, or art, had been invariably wrought by the momentum of great instincts of mankind. The genius who embodied in new forms the exigencies of a great movement, floated rather upon the breast of the wave than stirred its resistless force to motion. He confessed that he could not as yet recognise symptoms of that great movement which he had no doubt would sooner or later modify the architecture, if not any of the other arts, of this country. He believed, however, that the only way in which successful novelty could be now achieved was not to neglect the past, but rather to study its elements more profoundly; to distil its spirit, and to throw away the exhausted residuum. The artist's path was clear: he had firstly to know; secondly, to equal; and thirdly, to surpass antiquity: that done, the Future might take care of itself.

Mr. Scott afterwards briefly stated that the views of the committee had been fully expressed by Mr. Hope; that they had only named an ancient type as a means of keeping the competitors together, as, if they were all working in different directions, and with different aims, it would be most difficult to compare their works; but that, subject to such a guiding idea, each might strike out as boldly in his own line as he might think fit. Mr. Scott also announced that Mr. Hope had offered a second prize for ironwork, and subsequently proposed a vote of thanks to the chairman, in very complimentary terms.

Mr. Cockerell responded to this in a very feeling and interesting speech, taking occasion, from what Mr. Scott had said, to claim for the artist and the artificer a high rank among those to whom honour is due—a position fairly ranking with the statesman and the general—and quoted "the noble words of Isaiah," which rank together in the same sentence the captain, the honourable man, the counsellor, the cunning artificer, and the eloquent orator. This led him to compare the honour due to the artist with that paid to the Crimean heroes (a subject of such painful interest, that he was unable to proceed with it). He concluded by expressing his thanks to the committee for inviting him, and his hope that he might on a future occasion form one of their body, a wish which was responded to by acclamation by all of the committee present.

The meeting concluded with a vote of thanks to the donors of the prizes.

This may be considered the most successful, and also the most promising meeting which has been held at the Architectural Museum. It can scarcely fail to stimulate the committee to even greater exertions; while, on the other hand, it affords conclusive proof that those exertions are appreciated, and will be productive of the most important results. This museum ought to rank with our national institutions: and, indeed, its public utility and value have been recognised by the Government in a grant of 100*l.* as a subscription for the current year. It is to be hoped that this grant may be, not only continued, but increased; and that more extended means may enable the committee to develope the full capabilities of their museum.

OLD LONDON.

THE OXFORD ARMS INN.

The Oxford Arms Inn, in Warwick-lane, Newgate-street, London, is one of the best specimens of the old London inns now remaining in the metropolis. It is situate at the end of a narrow street called Oxford Arms-passage, going out of the west side of Warwick-lane, and southward of Warwick-square and the old College of Physicians.

At the end of Oxford Arms passage you observe a red brick pedimented façade of the period of Charles II. surmounting a gateway leading into the inn-yard, which has on three of its sides two rows of wooden galleries, with exterior staircases leading to the chambers on each floor, the fourth side being occupied by stabling built against part of old London-wall.

This house was an inn by the sign of the Oxford Arms before the Fire of London, in which it must have been consumed, but it appears to have been rebuilt on the model of the former building, and but for some modern vehicles

OLD LONDON: THE OXFORD ARMS INN, WARWICK-LANE.

standing in the yard, one might not unreasonably expect to meet there a band of the Nevill's men-at-arms in their red coats, embroidered front and back with the bear and ragged staff, and to get as much meat as one could prick and carry away on a long dagger.

Mr. Peter Cunningham has collected in his "Handbook of London" nearly all that is to be found about this place. He notices a bas-relief of Guy Earl of Warwick, with the date 1668 upon it, at the corner of Newgate-street and Warwick-lane, but some think the figure might as well represent a celebrated carcase-butcher in the neighbouring market of Newgate. Mr. Allen ("History of London," vol. iii. p. 571) says that it represents Richard Nevill, the king-maker. The sculpture was restored in 1817 by J. Deykes, architect, as appears by an inscription upon it.

Stow says,—"Then is Eldenese-lane, which stretcheth north to the high-street of Newgate-market: the same is now called Warwick-lane, of an ancient house there built by an Earl of Warwick, and was since called Warwick-inn.

It is in record called a messuage in Eldenese-lane, in the parish of St. Sepulchre. In the 28th of Henry VI. Cicille, Duchess of Warwick, possessed it."—See Cal. Inq. post mortem, 28 Hen. VI. p. 241.

Four years previously, Henry Beauchamp, Duke of Warwick, husband of Cecilia, had died, seized of an inn, with six houses, sixteen shops, and one toft, in Gledenes-lane, in the parish of St. Sepulchre.—Cal. Inq. post mortem, 24 Hen. VI. p. 228.

And a few years earlier, Richard Beauchamp, Earl of Warwick, father of Duke Henry, had died, seized of the same, in the seventeenth year of the same reign.—Cal. Inq. post mortem, 17 Hen. VI. p. 191.

Stow also says,—"I read that in the 36th Henry VI. the greater estates of the realm being called up to London, Richard Nevill, Earl of Warwick (the king maker), came with 600 men, all in red jackets, embroidered with ragged staves before and behind, and was lodged in Warwick-lane, in whose house there was often six oxen eaten at a breakfast, and every tavern was full of his meat; for he that had any acquaintance in that house, might have there as much of sodden and roast meat as he could prick and carry on a long dagger."

Of the Oxford Arms Inn, the Handbook gives us an advertisement from the *London Gazette* of March, 1672-3, No. 762: "These are to give notice, that Edward Bartlett, Oxford carrier, hath removed his inn, in London, from the Swan, at Holborn-bridge, to the Oxford Arms, in Warwick-lane, where he did inn before the fire; his coaches and waggons going forth on their usual days,—Mondays, Wednesdays, and Fridays. He hath also a hearse, with all things convenient, to carry a corpse to any part of England."

The Handbook says, too, that at the Oxford Arms, in Warwick-lane, lived John Roberts, the bookseller, from whose shop issued the majority of the squibs and libels on Pope.

The Oxford Arms was not, however, part of the Earl of Warwick's house; as it belongs, and has belonged of old time to the Dean and Chapter of St. Paul's. It is now and has been for many years past occupied by Mr. Edward Sherman, the veteran coach proprietor, who is also the spirited builder and worthy landlord of the Queen's Hotel, formerly the Bull and Mouth, in St. Martin's-le-grand. The houses of the Canons Residentiary of St. Paul's adjoin the Oxford Arms on the south, and part of London Wall is still remaining in the court-yard of those houses. There is a door from the Oxford Arms leading into one of the back yards of the residentiary houses, which is said to have been found useful during the riots of 1780, for facilitating the escape of Roman Catholics, who then frequented the Oxford Arms, from the fury of the mob, by enabling them to pass into the residentiary houses; for which reason, as is said, by a clause always inserted in the leases of the Oxford Arms, that door is forbidden to be closed up.

THE CONDITION OF DUBLIN.

Entering this city by the regular approach, which is now limited to one station, the traveller is struck with the wondrous beauty of all that meets his eye, until he is housed at the Shelburne or the Gresham, or some other of the fine hotels which await him with open portals.

At first, on nearing land, the hills of Howth and the Dublin range form a fine amphitheatre, encircling a rich, undulating, and verdant plain central within which is situated the ancient capital, Eblana.

There are, it is true, two harbours, Howth, eight miles distant, and Kingstown, seven miles, both having railroads; but the latter is by far the most capacious and the more easily made. These facilities, and the beauties of the adjacent country, vicinal to the scenic perfections of the county of Wicklow, have planted at that locality a large town and population. Thence, to Dublin, a continuous succession of towns or villas occupy the expanse, which, thirty years back, was but pasture or rocky down.

On other sides, too, the suburbs have been extended for miles; in the direction of Rathmines, fully a mile and a half, and about a mile towards Donnybrook; both situated southward, as far as the brook dignified by the title of the river Dodder. Beyond this, again, the whole rolling plain to the mountain foot is studded with villas, numerous enough to accommodate a redoubled population.

Nothing can be more captivating, at a first view on a fine day, than the aspect of all that is described,—the teeming shops and fine terraces of Kingstown, the justly-placed, well-shrubbed, solid-built, oft-recurring villas, the glorious sea, and land views, and not least, the genial air.

So, on passing the great leading thoroughfares, the eye is fascinated by squares of extent not to be equalled in any city; causeways, open, garnished with bordering shops; emporiums of commerce, buildings judiciously placed (a rare accident in capitals), and a river unequalled anywhere for its quay-walls of granite.

Such is the impression made by a first day's experience. Afterwards, the wanderer having seen the principal points, searches further: he penetrates into the back settlements of trade, into the Liberty, formerly the seat of manufacture, famous for the production of the texture called "poplin." Here vanish all the visions inspired by the first aspect and impressions. Houses, once occupied by merchants, factors, and negociators, are in a miserable state of decadence. Ware and store houses, dwellings and stables—all are in a tottering, decaying condition. Streets, lanes, courts of dwellings hitherto occupied by the working classes, keep pace with the sinking state of the factories which fed them: still tenanted, they are unglazed in many cases; but in all, the resort of a race unsustained by the continuous exertion and returns of industrial art. The old iron and material booths look more rusty, and the rag-shops more ragged than ever. Dublin is no longer a manufacturing town. They make and mend boots and shoes, it is true; but their chief supplies in these commodities are deduced from Nottingham; so of ready-made clothes, of earthenware, of china and glass, of cloth,—nay, their very fuel: these are chiefly drawn from England, whilst Ireland teems with coal, wool, flax, and all the primary elements of industry! Departed is the busy manufactory, and with it the wealth deducible therefrom,—even the linen factory, once notorious for its grand civic hall, as also for the independence of its numerous factors:—this trade has been transferred to the flourishing commercial town of Belfast, and the building is now occupied as barracks. Those good houses in neighbouring streets, formerly the residences of factors, places where many large fortunes have been amassed, are consigned to residentiary pauperism in single chambers.

It is thus that the bye streets, not twenty years back respectably inhabited, are descending also in the scale: the north-west limb may be said to be palsied! Dorset-street and Summerhill, even yet good streets, are shifted to minor trades and pursuits: the south-west quarter is visibly decaying; but the Liberty, the heritage of the great Earl of Meath, is wholly collapsed.

There are, it is true, still some extensive trading firms scattered throughout this modern Palmyra,—Darcy's Brewery, Busby's Distillery, and some few others of minor note,—but the throwsters are gone, the shuttle still, and devastation, only, *looming* in the distance.

As amongst such a population there must be a considerable provision trade, so the system of mutual supply goes on; but the grand relique of trading interest exists here chiefly in providing the world without in that matchless beverage, "Dublin stout:"—whether it be the excellence of the water (deduced from a mountain brook called the Tongue), or the superior skill of Messrs. Guinness, or Manders, or D'Arcy, or whether Irish malt or Irish barley be the better ingredients, deponent knoweth not; but every one knows that the foregoing, together with whiskey and provisions, forms the staple of this land of plenty. That plenty is reduplicated by improved agriculture and by amended habitudes, by encouragement to the labourer, and by the new lights thrown upon occupancy interests. If the emigration of idle and untaught hordes have lightened the burthen of poor-rates; the immigration of independent proprietors and yeomen has conduced in the highest degree to increase the productiveness of the land, and to advance the condition of the inhabitants.

As to the country, poverty (that is, pauperism) is on the wane; not so in Dublin: there the deserted houses, late the hive of industry, are filled in by the evicted tribes: each cell, however chill and tottering, is a "*refugium peccatorum;*" and the luckless denizens of town have imposed upon them the onus of contributing to the rate in aid. In one poorhouse only there are 3,000 paupers! These are maintained at a cost of 3s. 6d. per head per week.

To an Irish pauper such a resort is no purgatory—quite the reverse: it is a sort of settlement for declining life, a species of ultimate independence. Here the corporation manages such matters: they are omnipotent in Dublin as in London; and, although such illustrious bodies cannot be corrupt, it is objected that while the rates are unreasonably heavy—about 30 per cent. on the rental—the poor are not properly employed to clean the streets—streets perhaps the most beautiful (as to the open causeways and tasteful shops) in the world; but certainly as dirty as Pera or Constantinople itself could give in evidence. These streets are in reality either two inches deep in mud, or so dusty that at times it is penal to walk through them.

There are two causes for the rapid decline of the city—a decline visible in its best quarters. For instance, in Mountjoy-square (noble houses) the rent has come down one-half: a house there, equal to 200*l.* or even 300*l.* in London, may be had for 70*l.*; in Harcourt-street, still finer mansions, for 50*l.*; and so on throughout all the palatial ranges of the departed nobility and gentry. The rates on such houses would exceed 50 per cent. on the rental. Still there is a more operative stimulus to the evacuation of town houses to be found in the now fashionable practice of living out of town, in the truly beautiful and picturesque suburbs which encircle Dublin on all sides, but mostly on the south—Roebuck, Dundrum, Rathfarnham, and chiefly Kingstown, Dalkey, Killiney, and the all-glorious Bray and Enniskerry.

Hitherward, the *Railway* and the open sea (called here, poetically, the Salt Water) lure away the wealthy as well as the small capitalist and the man of business,—as, near London, the first and second stations are thronged with villas; the main streets here are thronged with gaiety, and the shops stored with plenty; but as there is no commerce to sustain the centre, so the deserted houses sink in value, and fail in the structure. What fills London, from the provinces and from the whole world—namely, the railway—empties and impoverishes Dublin.

What then is to be done with tumbling dwellings, and stables, and factories? Are they to be left to the progress of galloping decay, or are the materials of no use?

Many fabrics there, are propped up, as to the walls, by large timbers standing out in the streets, and bearing against second or third stories; the roofs, &c. having fallen in!

These are facts for the Corporation, or the Earl of Meath, or whom it may concern; but they are facts. Could not some utilitarian cosmopolite suggest a remedy?

As to trades, it is, perhaps, too much to say there are none prosperous, save those of the producers of beer and strong drinks, alcohol, &c. There is a trade in this great cattle-producing country which still flourishes, and has always prospered: it is the horse trade. Long celebrated for a hardy and powerful breed of hunters and of hacks, Ireland has supplied the English market, and mounted the cavalry. The marts in this way are numerous and respectable,—as to extent and amount of business, far exceeding even the London repositories. There are few that attempt any external show; their object being to give ample space and good keep, for which the abundance and excellence of forage affords great facility: Clarendon's, with riding-school; Ferrall's, a dealer and livery man, being also a veterinary surgeon; Dawson, of Stephen's-green: but there are of other small dealers, a host, for horses are exhaustless as dealers. Thus the verdure of the Emerald Isle (and in reality it is so) is turned into money, for grass is also flesh.

In proof of the spirit of Irish enterprise and skill, it must not be omitted to state, that there is one great manufacturing house in this slumbering metropolis, which despite of many disadvantages, carries on trade in a material not considered indigenous to the soil of Ireland, or which, if latent therein, has been as yet unwrought, namely, in iron and coal.

Mr. Richard Turner, of Hammersmith, on the Rock-road, imports his iron and coal from England; maintains a foundry and forges there, which occupy an area of 6 acres, together with another of two acres in the city; employs very numerous hands, and has successfully competed with the Titanic furnaces of manufacturing Birmingham.

The merits of these *transmarine* foundries, have been evidenced by works which have only to be named—the Kew Conservatory, and the Victoria Regia House, erected in 1847 and 1852—the Liverpool railway station (400 feet by 180 feet span).

Lord Faversham's conservatory at Duncombe-park, Yorkshire; Lord Aberdeen's ranges at Haddo House; and numerous others in England, Scotland, and Wales; all attest the genius, perseverance, and merits of the spirited conductor of these works:—by him the elaboration of grand and colossal designs was first carried out in Dublin.

There it was that the conception of a *transept* for the Crystal Palace first originated; for Mr. Richard Turner's was the only design, of 200 in competition, which comprised that grand desideratum in the structure!

The successful plan and model of the Great Birmingham Station, was also sent in by Mr. Turner. He *obtained the prize* for the conception, but the completion of the work was given to a great English firm!

"Sic vos non vobis mellificatis apes."

Let us hope hereafter for competitions open to all subjects of Great Britain; and as Ireland possesses fields rich in products, and redolent of genius, for "a fair field and no favour."

As for the relinquished mansions of the nobility, they are converted chiefly into public institutions. The Lord Chancellor's, Stephen's-green, is a museum, with noble geological collections: Back Whaley's Palace (same place) is a Roman Catholic college: the Duke of Leinster's is the present Dublin Society's Museum,—and a splendid one too: Lord Moira's is a poor-house! Lord Powerscourt's,—first the Stamp-office, now Messrs. Ferrier's millinery magazine, on a gigantic scale; and so on of the rest.

The doctors, who seem to subsist chiefly on the school for medicine and surgery, have succeeded the gentry and nobility in the principal squares,—the lawyers taking also a fair share; and so the gradation and alternation goes on.

But for the Lord Lieutenant and the army, what would become of Dublin? It is too dreadful to contemplate! Sometimes there are vaticinations, to the effect that the mimic Regal Court is to be transferred, if not abated. What then would become of the heart of Ireland, or to what purpose might the Castle be converted? When the *Rook moves*, the game is in danger; but these bodings are baseless. To abolish the Vice-Regal Court would be to scathe the whole social fabric; and there never was a nobleman invested with that office who gave more complete satisfaction, and made himself more universally popular, than Lord Carlisle.

QUONDAM.

SOME NOTES ON THE INTERIOR DECORATIONS OF ENGLISH HOUSES.

The importance of improving the style and condition of the houses in use, of both the rich and poor, is so evident, that it requires little apology for collecting a few particulars in connection with them, from the pages of the past, and comparing, so far as their internal fittings are concerned, the taste and arrangement in fashion then and at present. This sort of inquiry is necessary, in order that we may be able to appreciate an advancement, and also lest we fail to give sufficient credit to those who have gone before.

Not to dive too deeply into times of remote antiquity, we may remark, that before the advancement of civilization had led to the construction of suitable dwellings, the love of art, more or less possessed by all, was shown in the curious and often rich and beautiful adornments of the person,—amongst the various tribes of Indians, the arrangement of colours,—the skilful application of materials often causing both pleasure and surprise.*

The cover of walls and frameworks of wood, the protection of roofs, and other means of shelter, soon diverted the adornments of the person to the various portions of the house, &c.: the woven webs, the paint, once used only for dress, have evidently, at early periods of most nations, been applied to render more sightly their primitive homes.

Amongst the Egyptians the weavers' art had been long known before the days of the pro-

* Some specimens of different kinds of work lately brought from the Arctic regions, and exhibited at the Polytechnic Institution, were so beautifully wrought, that they excited the wonder of many who had thought the people of those climes were mere savages.

phet Isaiah, for we find it said in the 19th chapter of that book, after mentioning that various things shall perish, "Moreover, they that work in fine flax, and they that weave net-works, shall be confounded."

In Ezekiel, chapter xxvii. verse 7,—"Fine linen with broidered work from Egypt was that which thou spreadest forth to be thy sail: blue and purple from the Isles of Elishah, was that which covered thee."

Solomon, when building the temple, had made for him a "vail of blue, and purple, and crimson, and fine linen, and wrought cherubim thereon."

In Proverbs, chapter vii. verse 9, is the following:—"I have decked my bed with coverings of tapestry, with carved *works*, and with fine linen of Egypt."

Without entering into further particulars of the house fittings of ancient people, we will endeavour to give some notes of the interior of the houses of the Anglo-Saxons.

The buildings, probably, were of small size, and mostly of wood. The open or horn-filled windows, the imperfect carpenter's work, the pinning, &c. of the timber, and other defects, would soon show the necessity for some kind of hangings to keep out blasts of wind and harsh weather: we find, therefore, that at an early date the Anglo-Saxons used fixed and other hangings, some with the figures of golden birds in needle-work, some woven and some plain. Mention is made of a *vail* or drapery partition of this period, on which was the destruction of Troy: this was the gift of a royal personage. It was customary in those times for ladies of rank to work records of the actions of their husbands with their needle, and leave them at their death as heir-looms to their families. In the absence of books and other amusements familiar now, many an hour has been pleasantly whiled away in such works. Hangings, stained with purple and other tints were commonly in use, the more elaborately wrought being kept for high days and festivals, as too precious for general wear.

The elaborate patterns in the Anglo-Saxon stonework, and the rich colours of their illuminations, were imitated in the dwellings, the trinkets, and the dresses of the ladies. Plain colours, we are told, were not in favour: in the rooms of the Anglo-Saxons were ornamented footstools, and costly tables of silver and gilding. Ethelwold, in Edgar's reign, is said to have possessed a table of silver of the value of 300*l.* The graceful shape and gay colours of the ladies' dresses of that time must have been in rare harmony with the matters adjoining. The bedsteads were much carved, and, as we see by examining the book illuminations, hung with embroidered curtains: so valuable were many of these that they were left from father to son for several generations. In the chambers were mirrors of silver, candlesticks and lamps of various sorts, of bone, silver, gilt, &c.: they had hand-bells and other luxuries which we scarcely give them the credit of possessing. The beds were covered with different materials, sometimes with goat's skin, bear's skin, &c. They had golden and other drinking-cups, horns richly chased; glass and earthenware vessels. They had also the wholesome luxury of the warm bath. "Their use," says Sharon Turner, in his admirable 'History of the Anglo-Saxons,' "seems to have been very common, for a nun is mentioned, who, as an act of voluntary mortification, used the warm bath only on festivals." Not to go to bed (a warm and soft one), but to lie on the floor, or not to use the warm bath was considered, by our Saxon ancestors, who lived more than 1,000 years ago, as a severe penance. Considering the immense masses of dwellings in England at the present time in which no provision has been made for a warm, or any other bath, it cannot be said that we have improved in this respect so much as we ought to have done.

In Greek, Roman, Egyptian, and Assyrian wall-hangings, we find representations of remarkable historical and other transactions.

Part of the ceremony of the coronation of Canute and his queen is painted at the beginning of a manuscript of the period, formerly belonging to Hyde Abbey, and which was probably executed by direction of the king.

Henry III. is known to have issued directions for the execution of several artistic works, for the adornment of both ecclesiastical and domestic edifices. Although it is not mentioned what were the subjects which that monarch ordered to be painted in his queen's chamber at Winchester, yet in other instances the subjects have been explicitly mentioned.

The carved history of Edward the Confessor and also a painted history (the former still in existence in Westminster Abbey, the latter, except a small portion, destroyed), and the carved pillars of Ely Cathedral, are of this king's time. He also caused to be executed the histories of the two royal saints Edmund and Edward, which were painted in his round chapel at Woodstock; the history of the Crusade, in the king's great chamber in the Tower of London, and in a low room near his *Jewry* at Westminster, which last room, on account of its being so decorated, was thenceforth to be called the Antioch chamber. The story of Edward the Confessor taking off his ring and giving it to a poor stranger, was painted in St. John's Chapel, in the Tower of London, and in the queen's chapel, at Winchester.

Langton, Bishop of Lichfield, caused the coronation, marriages, wars, and funeral of Edward I. to be painted in the hall of his episcopal palace. The story of Guy, Earl of Warwick, was wrought in a suit of arras, and presented by King Richard II. to his half-brother, Thomas, Earl of Surrey.

May we suggest that the Anglo-Saxon period of English history affords some excellent subjects for our painters, and has not been much worked?

In many instances we have, in the illuminations of this time, pictures of events which had probably been witnessed by the artists, and rendered by them with fidelity, and as well as the knowledge of perspective and composition would allow; and however imperfect the art of this period may be, it cannot be doubted that modern painters will find in these ancient works the details of the dresses, of the ladies, the robes and head-dresses of kings, priests, and peasants, as truly marked as they are in those on the walls of Egyptian temples, or on the wondrous carved chronicles which have recently been brought to light by the exertions of Mr. Layard and others.

The conquest of England by William the Norman, together with the circumstance which led thereto, was, by command of Queen Matilda, represented in painting, and afterwards by her own hands, and with the assistance of the ladies of her court, worked in arras, and presented to the cathedral of Bayeux, where it is still preserved.

During the struggles between the Normans and the Anglo-Saxons, it is probable that the interior decorations of the English dwellings became much plainer: the substantial and increased size of the various new buildings would also to some extent help to produce this effect. In the thirteenth century a revival took place in England in the use of colour and decoration, partly caused by the accounts the Crusaders brought of the coverings of the walls of the Oriental buildings. The English and French, like the Flemings at an early period, were distinguished for the excellence of their tapestry, which met with a ready market abroad. The foreign demand, and also that caused by the increasing wealth of the citizens, would naturally lead to the production (on a large scale) of those artistic wall coverings. The most ancient tapestries were worked in narrow strips on frames by hand. In course of time the ingenuity of the manufacturers devised the means for weaving their pictures and diaper patterns on a large scale.

The introduction of carved panels and other woodwork, corresponding in design with the various changes of the architecture, added much to the good appearance and comfort of the old English dwellings. Engravings of these, arranged according to their proper dates, have been published by Pugin and others; and we may mention that a most useful collection of casts, &c. of wood panels (formerly Mr. Cottingham's), is now arranged for the use of students in the Architectural Museum, Cannon-row, Westminster.

The relics which we still possess of the ornamented work in use in England in the twelfth, thirteenth, and fourteenth centuries, enable us to form some notion of the elaborate details and richness of the decoration of the interior of the English houses at that time. Nor were the tapestry and embroidery confined to the nobility and gentry, as is shown by the displays made by the citizens of their household stuffs from their windows and on the house-fronts on great occasions. Notwithstanding all this finery, the sanitary state of affairs will not bear thinking of, and we fear that, owing to the want of drainage, the dampness of the houses must have been a cause for general complaint, and too serious to be dispelled by even the large fires of wood so commonly in use. This opinion is to a certain extent confirmed by mention, by the old writers, of the framework of the arras or tapestry at a distance from the walls.

In Shakspeare's play of *Hamlet*, a noise is heard behind the arras. Sir John Falstaff speaks of "behind the arras."

Besides the tapestry of the walls, a covering of embossed gilt and coloured leather-work was much in use, which was probably introduced by the Crusaders, who had witnessed the Oriental practice of covering walls, &c. with prepared skins. Such hangings were for a long time manufactured to a considerable extent at Venice and Cordova. At East Ham, in Essex, not very far from the famous old Greenstead Church, is a house of old date, with a tower something like that still left at Canonbury, Islington, which is said to have been the place of residence of Anne Boleyn, during the time of probation before her marriage with Henry VIII. tradition mentioning that from a window of this tower the unfortunate lady was pleased to have a view of the courtly lodging of Henry at Greenwich. Be that as it may, there was in this house a chamber covered with leather-work, finely gilt and ornamented. The proprietor of the place at that time having an eye to the value of the *bullion* contained in this interesting fragment of old art, had it taken down, and sent to a man accustomed to melt such matters, and from the ashes was collected about 80*l.* or 90*l.* worth of gold. Some fine specimens of this sort of decoration still fortunately remain *unmelted*.

CHURCH-BUILDING NEWS.

Canterbury.—A cemetery is on the *tapis* for this city.

Glastonbury.—In the parish church of St. John the Baptist, on Easter Sunday, a new stone pulpit, the gift of Lady Charlotte Neville Grenville, was uncovered, and used for the first time. It is constructed of Painswick stone, carved in six Gothic panels, each panel containing two niches, and each niche a sculptured figure of one of the Apostles. The design was furnished by Mr. Scott, from portions of an old stone pulpit recently discovered in the church, and has been executed by Messrs. W. and F. Merrick. The pulpit has been fitted with a brass desk, presented by Mr. T. Porch Porch. A new font of Painswick stone, similar to the mutilated one now in use, is about being presented by the Misses Neville. For the restoration of this church a committee has been appointed, who invite contributions in aid of the undertaking.

Liverpool.—The chief stone of the new Roman Catholic church of St. Vincent of Paul was laid on Tuesday before last, in St. James-street, Liverpool. The plan is of an oblong form, to suit the requirements of the ground, and is composed of a chancel, 27 feet long by 24 feet deep; two side chapels, 24 feet long and 12 feet wide, which will eventually be separated from the chancel by an open metal screen; and a nave divided from the above by three Painswick stone arches. The nave is composed of six bays, and measures 96 feet in length by 60 feet in width, and 62 feet in height. The style of the building is Early Decorated. The external wrought work is to be picked out of the Stourton-hill Quarry, and the walling stone is from Upholland. The internal masonry will be executed in Painswick and Caen stone. The church will seat 1,000 persons, with standing room for 500 more. The contract is taken by Messrs. Haigh and Sale, of

Liverpool, and amounts to 6,700*l.* The church has been designed by Mr. E. W. Pugin, and Mr. Eyre is engaged under him to superintend and direct its execution.

Broughton (*Manchester*).—Broughton Independent Church, as designed and now in course of erection, is a structure in the Middle Pointed style, the mouldings and tracery partaking of the characteristics of the former half of the fourteenth century. It is cruciform in plan, with a tower at one angle, surmounted by an octagonal lantern, which is terminated by a spire. At the corresponding angle is a porch. The front window occupies the entire gable: its tracery, it is expected, will be filled with stained glass. The transepts have also large windows. The carved work is to be out of Ancaster stone. Iron is used in place of stone in the nave arches, which are carried up above the galleries as a clerestory to support the roof, which has curved centre and principals, and by this arrangement is reduced into three spans transversely. The stone is built to form a contrast throughout—brown parpoint walling and white Ancaster and Yorkshire tire dressings. The work is being carried out by Mr. T. George, of Ashton-under-Lyne; under the direction of Mr. Thomas Oliver, of Sunderland, architect.

Rawmarsh (*Rotherham*).—The village church of Rawmarsh has recently undergone various repairs and alterations. A tower, 50 feet in height, has been added to the building, with a peal of bells supplied by Messrs. Mears. A new roof has also been given to the edifice. The alterations and repairs have cost upwards of 800*l.* of which 186*l.* remain to be subscribed. Mr. Chadwick, of Masborough, was the contractor for the roof and masonry, and Mr. Ludlam for the woodwork.

Alderley.—A chancel in the Decorated style has been added to the old church at Alderley, the gift of Lord Stanley. The architects employed were Messrs. Cuffley and Starkey, of Manchester, and the stained-glass windows were the work of Messrs. R. B. Edmondson and Son, of Manchester.

Bilton.—The church of Bilton, erected by the liberality of Mr. William Sheepshanks, was opened on Sunday before last, by the Rev. T. Sheepshanks, the incumbent. The church has been erected from designs furnished by Mr. Scott. The general style of architecture adopted is Early English. In the clerestory the architect has substituted a double window of a later period for the single lancets of the nave and chancel. The walls of the interior are limestone. The roof of the nave is of open timber-work. The chancel has also a timber roof, a principal feature being that the ribs spring from the corbels and intersect each other, somewhat like a groined ceiling. The pulpit is of white limestone, and is of an octagon form. The organ will be completed shortly by Messrs. Hill, of London. The whole of the chancel windows are to be of stained glass. At present only the east end has been filled: this portion has been executed by Mr. J. C. Crace, of London. The subjects of the medallions introduced into the east window are incidents in the life of Christ: the rest of the windows will be completed early in summer. The total length of the church is about 77 feet, the chancel being 34 feet long by 20 feet wide.

Great Glemham.—Last year attention was directed to the dilapidated and dangerous state of Great Glemham Church, and a proposition then made of securing the roof by tying it together by iron rods. This scheme has been abandoned, and Messrs. Morgan and Phipson have been consulted, who recommend that the roof should be restored to its original stability by the means successfully adopted at Woolpit, Cotton, and other churches, where the roofs had spread in the same manner. The architects likewise propose to pull down and rebuild the south aisle, the foundation of which has given way, which failure is one of the main causes of the present ruinous state of the church. Messrs. Morgan and Phipson have been entrusted with the work of restoration.

Glasgow.—The cathedral, High Church, or "Hee Kirk," as it is vulgarly called, in Glasgow, was reopened on Sunday before last for public worship by the Very Reverend Principal Macfarlan. The alterations are all nearly completed.

LILLE CATHEDRAL COMPETITION.

We are glad to be able to announce that England has taken the honours in this competition. At a public meeting held on Sunday last, the mayor in the chair, it was announced that the first prize had been awarded to Messrs. Henry Clutton (Charles-street) and William Burges, motto "Fœderis arca" and the second to Mr. Street, of Oxford, motto "Quam dilecta tabernacula, &c." The third prize was awarded to M. Lassus, of Paris. All these designs are included in the nine we selected for notice, and are described, briefly, on p. 169.

At the appointed time, the Mayor, the authorities, the Commission, promoters of the work, and the Jury, took their seats at the tribune provided for them. This was the signal for the "Orphéonistes Lillois" to inaugurate the proceedings by singing the beautiful chorus of Soubre, "Elevez-vous! voix de mon ame."

The Préfet testified his sympathy with the cause by being present, although too unwell to speak his sentiments. M. de Contencin, Directeur des Cultes, President of the Jury, then rose, and explained to the meeting the causes which had led to the project of erecting a cathedral at Lille. He complimented the Commission on the happy idea which they had carried out, of appealing for designs to architects of all nations, and on the brilliant manner in which their call had been responded to.

M. Kolb-Bernard, President of the Commission, replied; after which, a hymn, in honour of Notre Dame de la Treille and St. Pierre, was sung, the words and music composed expressly for the occasion.

M. D'Anstaing, member of the Jury, then read their report, which was of some length, and expatiated on the beauty and skill displayed in the plans on which they had been called to pronounce their opinion.

The mottoes or titles to the works, which had been selected by the jury for the different class of prizes awarded, were then read; after which M. le Comte de Caulincourt, Secretary to the Commission, laid on the table the letters of the different candidates, the seals of which were then publicly broken, and disclosed their names and address. The following is the list, in addition to those already named:—"Honourable mention," to "Dum spiro spero," Mr. Jas. Lendon Pealey, Birmingham. —"Le Monument sera l'Expression d'une grande Pensée," M. Chas. Arendt de Greeweumacker, Luxembourg. — "I. H. S." M. Johan Muller, Cologne. — "Sancta Maria sine labe concepta," M. Auguste Hostmar, Carlsrue. — "Excelsior," Mr. John Robinson, London. — "Soli Deo Gloria," M. Ferdinand Sdaler, Zurich.—"Rosace symbolique," M. Ferdinand Kerchnez, Vienna.—"Nisi Dominus," Mr. Geo. Goldie, Sheffield. — "Si parva licet," M. Adhelmar Bouet, Caen.

Special mention was made of the two last on this list. The Jury regretted not having the means of awarding to them a medal.

Silver medals were awarded to the following:—1. "In veritate confido," Messrs. Isaac Olden and Son, Manchester.—2. "Spes," Mr. C. Brodrick, Leeds.—3. "Ad æthera tendens," Messrs. George Evans and Richard Poplarel, London.—4. "Deus adjuvet," M. Leroy, Lille.

Gold Medals.—1. "Dieu en soit garde," Messrs. Leblanc and Rimbaux, Rheims.—2. "Zelus domus tuæ comedit me," M. de Curte, Ghent.—3. "O clemens, O pia," M. Vincent Stratz, Cologne.

Thus it will be seen that out of ten prizes, five have been carried off by Englishmen.

Of the forty-one drawings sent in, twenty-two were at once put aside by the umpires, either for want of merit or excess in cost.

The exhibition of the designs excited the greatest interest in Lille. On the Sunday previously to its closing, the crowd of persons to view them was so great that it was necessary to form *en queue* to get admission.

The indifference shown in London to the exhibition of the designs for barracks now open, contrasts very strikingly with this.

Accumulator for Organ-bellows. — Against the notice in your recent number, p. 194, headed "Self-moving Wheel-chairs, &c." I wrote this query, —"Could not this (the Accumulator), be applied to the bellows of an organ?" and as your correspondent "Urgeo,"—and you seem to assent,—suggests "that others should contribute their thoughts to the *Builder* on this important subject," I venture to send you my thoughts towards obtaining a handy "traverser," "accumulator," or whatever it may be called, for the use of organ-players, instead of the present clumsy laborious working of a foot-iron, or an assistant; thus making an organ as independent an instrument as a pianoforte.—An Old Subscriber.

THE BARRACK COMPETITION.

Pressure of matter this week compels us to postpone the continuation of our notices of the exhibition of competition designs now open at Burlington House. We do this the more reluctantly, as we continue to receive numerous opinions as to the importance of this competition in reference to the public and professional interest which the question of competitions involves, and because there is really more for us to take notice of, than it is possible to report upon during the time that the exhibition is open. We had written some observations, which we hoped would draw the attention of the profession to the opportunity, even more directly than it has been drawn, and lamenting that at the close of the exhibition, results which might have been made of great value in the profession, and for general progress of art, would be utterly lost for any object worthy of such enormous labour and expense. One of our correspondents, "J. E." seeing the matter in the same light, observes that "it would take any man a month fairly to examine and weigh the real merits of the immense mass of designs," and thinks that as these designs have been taken possession of by the Government, it could not be asking too much of the Government that they should publish outline plans to one small scale of each design, with the written observations and specifications of the several competitors. Something certainly should be done. We append one of the letters which we have received, adverting to the same general subject:—

As one of the competitors in this case, allow me to express my unfeigned satisfaction with your excellent article in this week's *Builder*. You say rightly, that the exhibition at Burlington House ought to remain open as long as possible; and I trust, with you, that her Majesty's Government, if it do really retain all these costly drawings—useless now to their respective authors—will accord them some graceful (and I may say grateful) recognition of their having "done the state some service." I am sure that not the mere hope of pecuniary gain alone, but a wide prevalence of the maxim,

"——— Non tam turpe fuit vinci
Quam contendisse decorem,

must have existed amongst our British architects on this occasion; since in all my experience I have never known a competition so liberally responded to. How true are your remarks about the vast expense incurred in the mounting, the straining, &c.! Would that such things could all straightway be blown to the winds in future competitions, as I see they have already been by the Liverpool Library Committee!

A Barrack Competitor.

THE PEERS' OFFICES, HOUSES OF PARLIAMENT.

Sir Charles Barry's great work is approaching towards completion: the whole outline of the clock-tower is now seen, and the Victoria Tower is finished to the top of the parapet and foot of the turrets. These latter, however, will be 70 feet in height; and there will further be a flagstaff of great elevation, to bear aloft the banner of England when the monarch is present. The whole front from St. Stephen's Porch to Victoria Tower is appropriated for offices of the House of Peers, including peers' private entrance and staircase, committee-rooms, waiting-rooms, and the numerous other apartments required.

It also includes a large room to be called the Peers' Robing-room, which is to be decorated in fresco by Mr. Herbert, R.A. This is lighted from the top, and fitted up in oak, as is the case with the other apartments. The frescoes will be eight in number, of large size,—the subjects scriptural. The Cloak-room and Peers' Staircase are nearly finished, and promise well.

Our engraving represents the centre of this range of offices, with the peers' entrance. It is executed in Anston stone, mainly, as we are informed, from the quarries of Mr. Wright. Mr. Jay is the contractor. The pedestals on the top of the porch will support lamps, but these are not yet fixed.

Accident at the Lyceum Theatre. — Last Saturday, the men at work outside the theatre attached a ladder to the Bath stone balustrade, above the main cornice of the wing, on the south side of the portico. The stone balustrade appears to have been much decayed, and the result was that when a man stepped on it, it fell to the ground, fortunately without causing loss of life. It is desirable that the rest of the stonework should be examined.

THE PEERS' ENTRANCE, HOUSES OF PARLIAMENT.—Sir Charles Barry, R.A. Architect.

LET EACH DO SOMETHING.

WITH all our boasted philanthrophy, I do not think we cut much of a figure in comparison with America, as we have had some seven or eight centuries of comparative civilization to complete our institutions in, yet they are equal or before us in the number and quality of their institutions (slavery excepted). What a number of wealthy persons die every year in this country without having done any apparent good to society, although the ignorance and vice that prevail is visible to all, and the want of means to extend the useful institutions of the country makes a great increase of prisons and the asylums for the vicious and depraved necessary. To hoard the wealth that would do so much good, if properly employed, is not according to our religion, or our ideas of a truly great and generous nation. England had a long start of America, and had great wealth, and many public institutions, before she was born; but without we make great efforts to improve the condition of our people, we shall be left far behind by our young and spirited rival. There are plenty of wealthy people throughout the country, who are almost living for themselves alone: were they to "pluck up a spirit, and come out," they might set the "builder" to work in erecting churches, schools, and the many other institutions that require to be multiplied to make this country what we might aspire to be—the greatest on earth in works of charity and love. G. H.

FOREIGN ART INTELLIGENCE.

Paris: new Bridge Constructions.—In 1854 and 1855 four bridges have been either built or rebuilt in the French capital. On the *Pont d'Austerlitz*, whose breadth and solidity did not tally with the increased traffic, the iron spans have been replaced by stone arches, the piles alone having been preserved; and by means of an augmentation of thickness, guaranteed by the solidity of the foundation, it has been possible to enlarge the roadway to 18 *mètres*, and preserve the *trottoirs* on each side, being 3·50 *mètres* broad, and furnished with an elegant iron railing. The old *Bridge d'Arcole* was but a small passage suspended between the Place de l'Hôtel de Ville and the Ile de la Cité. The late improvements of the Rue Rivoli, &c. have induced the authorities to replace it by a larger construction. It is built, according to the system of the engineer, M. Audry, with arches of very slight elevation. This construction has borne an experimental weight of 800,000 kilogrammes, and has cost 1,150,000 francs.——The suspension-bridge of the Invalides was by its ephemeral construction a source of disquietude on every public occasion. These dangers have disappeared through the work of Messrs. Galissière and Michal, engineers of the State. Four arches, built of stone of 30 feet span, placed on the piles of the old bridge, form now a roadway 16 *mètres* in breadth, furnished with cast-iron parapets, which will cost 800,000 francs. On the projection of the pile of the middle are two statues of Victory.——The *Pont d'Alma* has been projected by the necessity of a communication around that part of the Champs Elysées, which surrounds Le Cours la Reine and the *terrein* of Chaillot, and which will soon be covered by new buildings in continuity with the Faubourg St. Germain, by various transections projected across the Gros-Caillou. This bridge, built entirely of masonry, presents three arches of from 39 to 43 *mètres* span, and has cost 1,700,000 francs.

A Document of the Life of Raffaelle.—At one of the late sales of MSS. at Paris, which contained also autographs of Lorenzo il Magnifico, Michelangelo, Benvenuto Cellini, &c. the *original* of that famous letter was sold, by which "Joanna Feltria de Ruvere Ducissa Soræ et Urbis Prefectissima," introduces Raffaelle Sanzi, then twenty-one years of age, to the Gonfaloniere and head of the republic of Florence, Pier Soderini (1st October, 1504). Many have been the controversies about the authenticity of this letter, in which men like Bottari, Pungileoni, Rumohr, and Passavant (Life of Raffaelle) have taken a part. Pungileoni objects to its authenticity, because (according to his reading) the father of Raffaelle, Giovanni Sanzi, is mentioned as alive, who had died ten years previous. It is strange that the source whence this interesting MS. came was not stated at the auction, neither the person who bought it, for 200 francs.

German National Museum.—This well-promising establishment has just published the first volume of its Memoirs, "Denkschriften." After the good example set by the republican cities of Frankfort, Hamburg, &c. other similar contributions are flocking in, so much so, that additional buildings have been hired, until the Charterhouse (*Karthause*), granted by the King of Bavaria, be ready for the general reception of the German Museum.

PROVINCIAL NEWS.

Hove (*Brighton*).—A new town-hall has been erected at Hove, for the Brunswick-square and Terrace district of Brighton. The new building, as described in the local *Herald*, is of three stories, having a frontage of about 56 feet in width, with an elevation of 60 feet. The *façade* is of stone, and the windows, from their number, constitute one of the chief features of the structure. It contains the usual accommodation for police, magisterial, and commissioners' business, to which the first, second, and third stories are respectively devoted. Mr. Fabian was the builder.

Woolwich.—A Government contract has been entered into by Messrs. Lucas, Brothers, for the erection of a new cannon foundry and boring mill, on a site between the two foundries already in progress in the Arsenal-grounds at Woolwich. The *façade* of the foundry is to be of various-coloured bricks, in a sort of modern Elizabethan style. The extreme length of the frontage, which is to be flanked by two wings running north and south, will be 360 feet. In addition to these works, the same builders are engaged in raising some other extensive buildings at Woolwich, all of which are in a progressive state. The paper factory is nearly complete. The shell foundry and laboratory saw-mills are also proceeding rapidly towards completion. The whole line of wharfage fronting the storehouse is being renewed and strengthened with large blocks of stone shipped from the Portland quarries.

Therfield.—The new national school, erected under the superintendence of the architect, Mr. Nash, was opened on 4th inst.

Lynn.—That portion of the harbour quay works which belongs to the corporation is now making considerable progress, and the remainder, under the control of the Select Trustees of the Harbour, will soon be commenced, as the great difficulty—that of providing the necessary funds—has, according to the *Norfolk Chronicle*, been surmounted. This section of the work is estimated to cost 7,000*l.*

Liverpool.—A meeting of subscribers to the Wellington Testimonial was called on Monday before last, in the Town-hall, when it was stated that the amount subscribed was 5,893*l.* 16s. 6d. all except 161*l.* 1s. collected. The interest amounted to 551*l.* 2s. 8d. and the balance to 6,275*l.* 10s. A column, as first intended, would cost 10,000*l.* or 12,000*l.*; and the question was what was to be done. Mr. Charles Turner thought a column could be erected for 7,000*l.*; and if the money was left at interest for a time a sufficient sum would be realised. He made a motion to that effect. Mr. William Rathbone and Mr. James Aikin preferred an equestrian statue, and Mr. Aikin made a motion to that effect. Mr. George Arkle observed that there was no site in Liverpool for a column. Mr. Torr objected to an equestrian statue, as there was no English artist could model a horse. Ultimately, Mr. Aikin withdrew his motion, and Mr. Turner's was adopted.——"It is gratifying," remarks the *Journal*, in allusion to improvements in the London-road, "to perceive the great progress making in the architectural improvement in our shops and the general requirement of a better class of premises in some of our streets. We are no longer confined to Church-street and Bold-street for elegant premises. The fine stack of shops recently erected in the London-road, extending from Norton-street to Burgess-street, may justly be classed amongst the first of the kind in the town, and the business of this street is rapidly increasing."

Manchester.—A group of colossal sculpture, comprising the royal arms in the centre, and seated figures of Commerce and Manufacture on either side, has been erected above the circular end of the Royal Exchange here. The workmanship is by Mr. Thomas, of London, sculptor, and the design is the joint production of Mr. Thomas and Messrs. Mills and Murgatroyd, the architects. The group measures 15 feet high by about twice that width. It is executed in Portland stone. The royal arms are sculptured in deep relief, and are ornamented with festoons of fruit, flowers, and foliage. The dimensions of this portion of the group are 15 feet 3 inches high by 15 feet 6 inches broad. The original weight of the block of stone for this portion of the group was seven tons: its present weight is five tons: the weight of the whole group is about twenty tons.

CEMETERIES.

A CORRESPONDENT says,—I read with much interest and pleasure the recent articles on cemeteries in the *Builder*, and was glad to see Mr. Walker's name kept up as the pioneer. There is in the British Museum, however, a much older one,—a letter addressed to King George III. by Wm. Hawes, M.D. the founder of the Royal Humane Society, on the subject, in which I think he shows the melancholy consequences of burying in churches, &c. It was Mr. Benjamin Hawes who, after a walk with the late Dr. Valpy, of Reading, over Père-la-Chaise, Paris, nearly twenty years ago, resolved to endeavour to take up the subject, and ultimately established the London and Highgate and Nunhead cemeteries; upon which Shillibeer, the first introducer of omnibuses, took out a patent for his one-horse hearse for a body and four or six mourners, which has led very much to the reduction of funeral charges; and making no extra charge for the distance, he promoted cemetery interments very much. At Nunhead there is a reception-room on the Frankfort plan, but as it deprives undertakers of a fee for what they call a deposit-room till the funeral, not one body has been sent to it.

BELLS AND BELL-HANGING.

THE remarks of Mr. Denison, in your number for March 22, on the calculations which I had the honour of submitting to the Institute of British Architects, compel me to request the favour of the insertion of a few lines.

It is scarcely necessary to notice Mr. Denison's assertion, that Mr. Baker and I "set ourselves to work to knock up as many of his conclusions as we could, by way of paying him off for having come to the conclusion that Mr. Baker's plan will not answer." This kind of argument is unworthy of Mr. Denison, and will have no weight with any one.

Mr. Denison goes on to state, that my calculations did not even profess to take any account of the friction, on which the whole question (with regard to hanging bells high in the stock) depends. This statement is in one sense true, but leads, by implication, to a supposition which would be untrue.

It is necessary for me to observe, that the object of my calculations had no direct reference to this point. The question I was investigating was the nature and amount of the strains on the bolt or bolts, and on the gudgeons supporting a large bell in motion, and the dimensions requisite for a single bolt supporting the bell in the mode patented by Mr. Baker. These strains depend on the form, weight, and velocity of the moving bodies, and are practically independent of friction. Friction was, therefore, properly left out of consideration in the determination of them. But, inasmuch as the amount of friction, *ceteris paribus*, varies directly with the resultant strain on the gudgeons, results which indicated that this strain was diminished by hanging the bell high in the stock, proved incidentally that the friction was also diminished in the same manner. Friction, therefore, was taken into account in drawing this conclusion from the calculations, though not in the calculations themselves.

Although it may be true, as stated by Mr. Denison, that the friction of a complex train of wheels was one calculated erroneously by the Astronomer Royal, I think most practical mechanicians will be startled at his conclusion that questions of friction are altogether beyond the powers of calculation, and will not be easily persuaded to believe that the friction resulting from the rotation of a single body on a single axis is governed by recondite and inscrutable laws.

With regard to facts, after every allowance for disturbing causes, those adduced by Mr. Baker remain

strong enough to confirm completely the conclusions of theory; and to allow Mr. Denison's objections to prevail would be tantamount to refusing to admit any evidence against his conclusions. The single fact stated by Mr. Taylor is insufficient to bear down this evidence, supported as it is by the almost unanimous opinion of practical ringers on the subject. It naturally suggests itself that there may be some mistake, or that causes may have been at work in this particular instance with which we have not been made acquainted. For example, an alteration in the diameter of the gudgeons would alter the amount of friction to an extent which might more than counterbalance the gain accruing from raising the bell in the stock. The York Bell is no instance against hanging a bell high in the stock; for although it has not been *set*, Messrs. Mears state that it has been *rung up to set* with ease. Those who are familiar with ringing know that when this is the case it is not the fault of the bell or any difficulty in *raising* it that prevents its being set.

It is clear, however, that no mode of settling the question, which is a not unimportant one, would be so satisfactory as that suggested by Mr. Burlison of a fair trial of two precisely similar bells, hung on the two different systems.

This experiment may easily be made, and will not require to be mixed up with the practical testing of Mr. Baker's patent principle, which, as Mr. Denison correctly explains, has nothing whatever to do with the advantages or disadvantages of hanging bells high on the stock. R. C. Nichols.

If Mr. Burlison will devote himself for half-an-hour to the turning of a grindstone of a ton weight (which will be about 5 feet wide and 9 inches thick), stopping it at every turn, and then look at a man ringing a decently-hung bell of the same weight, he will, perhaps, understand more than he does at present about the different effects of the friction on the axis, according as it is near to or far from the centre of gravity; and be able to form some kind of guess why a heavy bell is harder to set when it is hung a good way below its top than when it is all below the stock or gudgeons.

I have something else to do than to write answers to all the suggestions, doubts, and hypotheses of persons who have read just enough about bells to be able to pour out such articles by the dozen; and therefore I shall take leave of this subject with a remark which was accidentally omitted in my former letter, viz.—that as long as I have known anything about bell-ringing (which is now above twenty years), I have observed that long or tall bells, of what may be called the foreign proportions, are almost always inferior to the shorter ones of the usual English shape. Most of the best bells that I have seen are no higher from the mouth to the corner of the crown than three-fourths of the diameter, and some scarcely above two-thirds; so much so, that I always expect to find a bell sound a bad one if I see it is as high as the five-sixths, or even four-fifths of the diameter, which Mr. Burlison recommended on the ground that it is the height of most of the foreign bells, many of which, I understand, are as bad as I should expect them to be from their shape.

I need hardly add, that with short bells there is less excuse than with long ones, for hanging them high in the stock, on the grindstone plan, which is of comparatively modern introduction, like some other ingenious devices for making peals of bells as ineffective as possible. E. B. Denison.

INSTITUTION OF CIVIL ENGINEERS.

At the meeting on April 1, the discussion, being renewed, on Mr. Heinke's Paper "On Improvements in Diving Dresses and other Apparatus for working under Water," was continued throughout the evening.

The extensive use now making of the diving-dress, in the construction of the piers at Portland Breakwater, under Mr. Rendel, was mentioned: the water there being very clear, the divers work with great ease and certainty. Numerous diagrams were exhibited of the various improvements introduced by Mr. J. Bethell, and it was stated, that in consequence of the occurrence of so many accidents to divers, when using the open helmet, his attention had been directed to the subject, and he, in 1834-5, devised the tight-closed dress, attached to the helmet, and joined together at the waist by a brass girdle and screws, causing the air to escape from it by means of a ventilating pipe, from the top of the helmet, so as to get rid of all the respired and foul air; and thus keeping the diver constantly supplied with pure air.

There were also exhibited several drawings, showing how dock walls and stone piers could be built and repaired under water, by using the diving dress, and rocks could be blasted with gunpowder, fired either by the fuse in the ordinary manner, or by means of the galvanic apparatus.

Reference was made to several papers connected with the subject read at the Institution. The first was on April 10th, 1838, by Colonel Pasley, "On the Application of Bickford's Fuzes for Blasting under Water," in which that system was exclusively recommended for submarine blasting. In the discussion upon that paper, Mr. Bethell mentioned the experiments he had tried on the ignition of powder by the voltaic pile: he was requested to give an account of them at the next meeting, which request he complied with on the 24th April, 1838, exhibiting the experiments before the members at the meeting. It was then stated that Mr. Bethell's attention had been directed to the subject since 1834, whilst engaged on experiments connected with his diving-dresses. The merit of the introduction of the system of using the voltaic battery for the ignition of gunpowder in blasting under water had been claimed for Mr. Bethell; but this claim was contested, inasmuch as it was stated that Professor Daniell had mentioned the subject in his lectures at the Royal Institution long anterior to 1838; also that Colonel Pasley had his attention drawn to the applicability of the voltaic battery for exploding mines, by reading of a bridge having been so destroyed by an engineer officer in the Russian service, in presence of the emperor: the precise date of this occurrence was not stated. At all events, to Colonel Pasley belonged the merit of the first application of the system on a large scale and in a practical form.

NEW IRON DRILL-SHED, WOOLWICH.

The inconvenience of exercising men in the open air either during the severe cold of winter or heats of summer has been wisely obviated by erecting a spacious iron building 150 feet long and 80 feet span, lighted and ventilated at the top. The corrugated iron roofing is carried on T and rod-iron principals placed on iron columns, which latter are fixed on brickwork, and bolted through to iron plates *beneath* the concrete over which the columns stand, thus lessening the possibility of any accident happening from the action of the wind on so large and exposed a surface of roofing.

This work has been executed by Messrs. H. and M. Grissell, from drawings by Mr. Stent, and under the superintendence of Mr. Rees, clerk of works to the Royal Engineers' department.

METROPOLITAN BOARD OF WORKS.

At the meeting on Friday, the 11th, a deputation from the Board of Works of St. Saviour's District and the Directors of the South-Eastern and Brighton Railway Companies, on the subject of a line of street from the Borough High-street to the west end of town, came before the general Board, but no advance in the matter was made.

Embankment of the Thames.

A memorial from the promoters of an undertaking "for the Formation of an Embankment on the North Side of the Thames, between Southwark and Westminster Bridges, and for the Construction of a Railway and other Works," was received, and, after some opposition, referred to the Board of Works.

The Construction of Public Buildings.

A report from the Committee on Duties under the Building Act, containing the following recommendations, was adopted, viz.,—

"That in any case in which a disagreement shall arise between the district surveyor and the builder or building surveyor, under the provisions contained in the 30th section of the Metropolitan Building Act, as to the mode of constructing any public building upon which the determination of this Board becomes necessary, the question shall be brought before the Board by a memorial setting forth the facts of the case, accompanied by plans and explanations, upon the receipt of which the superintending architect shall communicate with the other party, and require him to furnish similar information in support of his case; and when the same shall have been received, the whole matter shall be laid before the Board, before whom the parties shall be required to appear, and, if deemed necessary, with witnesses."

The following is the clause of the Building Act referred to:—

"Clause 30. Notwithstanding anything herein contained, every public building, including the walls, roofs, floors, galleries, and staircases, shall be constructed in such manner as may be approved by the district surveyor, or, in the event of disagreement, may be determined by the Metropolitan Board; and, save in so far as respects the rules of construction, every public building shall throughout this Act be deemed to be included in the term building, and be subject to all the provisions of this Act, in the same manner as if it were a building erected for a purpose other than a public purpose."

An application from Mr. E. Murray, for permission to erect six buildings in Rope-yard Rails, Woolwich, beyond the regular line of fronts of the houses in the street, was refused.

Reports by the Superintending Architect.

An application made by Mr. Rodda, for the approval of the construction of eaves to two houses in Marquis-road, Islington, was granted.

Mr. Cook, of 7, Loughborough-place, Brixton, received the sanction of the Court to make a projection, not exceeding 14 feet in height, over the forecourt of his premises in that place.

Leave was given to Mr. Fuller to construct eaves to his house in Park-village East, under certain regulations pointed out by the superintending architect.

An application from Mr. Hemming, for the approval of the erection of a temporary iron church for St. Pancras, was, after some discussion, received, and the application granted.*

Assessment of the Metropolitan Districts.

On the motion of Mr. Seeley, it was resolved,—"That in order to make provision for the proper carrying into effect the 144th clause of the Metropolis Local Management Act, it be referred to the Finance Committee to prepare and lay before this Board an estimate of the several sums which it will be necessary yearly to assess upon each parish or district in the metropolis, in order to realise a stated income of 100,000*l.* per annum, to be applied to the purposes described in the said 144th clause; and also an estimate of the rate which will be required to raise such sum, supposing that the whole metropolis be rated in one and the same proportion."

CHELMSFORD.

The Shire-hall.—At the Essex Quarterly Sessions last week, reports from the Shire-hall committee and the county surveyor as to the late accident were read, and, after some discussion, the committee was continued; and it was referred to that committee to consider and carry out the work for which estimates were ordered by the late committee, and such other works as they might deem immediately necessary. The surveyor, in his report, stated that the building, notwithstanding numerous alterations, cutting walls, &c. was in a sound and trustworthy state.

The Chelmsford and Essex Museum.—A *conversazione* was held at the Museum on Tuesday evening before last, and was largely and respectably attended. A lecture "On Pottery and China" was delivered by the Rev. C. A. St. John Mildmay. The resources of the Museum were reinforced by various additions, including a fresh-water vivarium, photographs and stereoscopes, &c. The lecture and other proceedings are reported at some length in last week's local *Chronicle*.

The new Railway Station.—The works for the new station commenced, under the direction of Mr. Bruff, engineer to the company, on Monday before last, Mr. Jay, the contractor, undertaking to complete the same by the end of June, under heavy penalties in case of default. The design is Italian, and includes a campanile.

COMPETITIONS.

Dorset.—I beg to direct your notice to an advertisement in the *Dorset Chronicle*, which accompanies this, soliciting plans from "architects, builders, &c." for the erection of a new workhouse at Blandford, in this county, which is unique in its utter stupidity.

Beginning with the above quoted heading, it goes on to say, a plan of the ground may be had "on payment of 5*s.*:" "the drawer of the plan" approved, will receive the munificent sum of "10*l.*—provided he should not afterwards become *the contractor* for the work;" and ends, by allowing from the 5th instant to the 3rd of May, for the preparations of designs for a workhouse capable of containing 250 inmates!

Architects, turn your gaze westward to the wilds of Dorset, for there, at Blandford (be that name for ever famous!), is "the unfound paradise of your despair."

T-e-n P-o-u-n-d-s—Ten Pounds!—that is the talisman that the wise men of Blandford invariably use when they invoke the genius of architecture: they used it with success (of a certain kind) in the cemetery competition already ventilated in the pages of the *Builder*: they used it when they longed to erect on the bleakest down in the county, the Farquharson testimonial column, 100 feet high, of solid stone, for the very adequate sum of 1,500*l.*; and, would it be believed, the wicked lure evoked some three-and-fifty designs: one or two very *stingant* ones came fluttering even from that *gim of the say, ould Ireland!* But, lucky men of Blandford, the column was decided *not* to be

* It has been intimated to us that some of the district surveyors have received back their "returns" from the superintending architect's department, for amendment on trivial grounds. We feel quite sure that Mr. Marrable needs but the suggestion to show due consideration for the time of these gentlemen.

built, so all discrepancies of cash in hand, and probable cost, were and are forgotten.

Now again, a third time, oh architects! ten pounds float before your enraptured—your fascinated gaze! Rush eagerly towards the prize, and prove yourselves the men that Blandfordian committees think you,—mere layers of bricks and mortar, or poor half-starved office lads, exclaiming, as you pawn your coats to obtain the requisite preliminary crown, "Our poverty, but not our will consents."

"A DWELLER AMONG THE GENTILES."

Aberystwyth Clock-Tower.—We hoped we had heard the last of this ill-managed affair,—but, lo! fresh letters from architects who sent plans and are unable to get them back again, or to learn if they ever came before the committee,—the latter declaring they returned all the plans, forty-five in number, last April. Comment is useless.

Blackpool Beach Improvements.—Last week the committee met at the Albion Hotel, Blackpool, to select the best plan, and award the premium of 10*l.* to the successful competitor. There were six plans, and the committee selected that by Mr. Henry Worthington, painter, of Blackpool.

Rugby Town-hall Company.—The successful competitors were Messrs. Clarke and Worthington, of London, and Mr. Edward Murray, of Coventry.

HOUSES IN MELBOURNE.

A LEGAL friend, writing from Melbourne, says.—"Money is scarce here: indeed, I may say that it is sometimes not to be seen, so that we have to take law out in beans, bacon, coals, and cabbages, instead of money; and I assure you that these articles are sometimes a great treat here. Wages of all kinds have gone down very much lately. Carpenters and joiners now get from 10s. 6d. to 15s. per day, according to their ability; bricklayers about 12s. 6d. per day, plasterers about the same, and all other skilled workmen in about the same ratio. But rent has fallen very much. An artisan can get a very tidy cottage for about 7s. a week, and, with the exception of bread and potatoes, all other articles of consumption are about the same price as in England,—some a little more, others less. I am much puzzling myself how I can possibly make my house cool. I wish the *Builder* could give me a hint. It is one of Manning's panelled houses, the sides of the rooms only eight feet high. I have made the centre of the ceilings much higher by carrying it up to the rafters and plastering them, and I have also plastered the whole of the outside of the house. The roof is of inch board covered with tin tiles; but when we have our hot days (about 110° in the sun) the heat inside is terrible: our dining-room is often above 90°. If any thing could be suggested I would try it; but I am afraid there is nothing but a two-feet brick wall, with rooms twelve or fourteen feet high, and upper stories to the houses, will keep the sitting-rooms cool. Our evenings are generally comfortable, but the days are terrible. The great heat also plays great havoc with the gutters,—ridge and valley gutters: they are constantly cracking, and then comes a sudden tropical shower (no joke about it), and we are all swimming inside. My house, being a large one, has three roofs, so that there are two valleys, which are constantly serving us as I have told you. I wish something could be suggested. I think I saw in the *Builder* some time ago, a plan for plastering ceilings and walls on wire net-work instead of laths, as a preventive against fire. Do you think it would answer? If so, this is the place where it might be tried, as fires are not uncommon here, and a fire does not stop at one house, but generally clears a row. Can any thing be done to render the wood less liable to ignite than at present? The insurance here is something frightful: they charge 50s. per cent. on all wooden buildings, so that my house and furniture, which cost me altogether nearly 2,000*l.* would be 50*l.* a year,—a large sum;—if the house is not detached, then about 15s. per cent. more! 'Freemasonry' does not thrive well here. There are several lodges, but they are mostly Scotch and Jews' lodges: indeed, I do not know of one purely English lodge.'"

Contracts for the erection of the new Houses of Parliament had been called for, by last advices; and it was made imperative that the portion of the work more immediately required should be completed by the 1st day of May next. The part of the building for which tenders had been called was the place of meeting for the Legislative Assembly, which comprises a chamber 71 feet by 39 feet, with division-lobbies, speakers' and members' rooms, and other erections. The designs for the building were prepared by Mr. Kemp, of the firm of Knight, Kemp, and Kerr, architects, under the direction of the Colonial Engineer, Captain Pasley. The style is Modern Roman; and the whole building, when complete, will cover an area of 305 feet by 250 feet. The grand façade will front Spring-street, and will be 60 feet in height. The building will stand back about 100 feet from Spring-street, the ground on which it stands being enclosed in a curve from the corner of Nicholson-street, thus throwing a bold area into Spring-street, to give additional prominence to the building. The whole will be made, as far as possible, fireproof. All elaboration has been postponed, though it is not intended to do anything in a merely temporary style. The side-walls of the Chamber will be divided into compartments, by Ionic columns, and coupled columns of the same order are ranged along the ends. The space between the pilasters will form panels, in which the heroes of our colonial history will find fitting places for their portraits.

DOINGS AT BEDLAM.

*"Bethlehemi ad portas tollit 'dupla columna.'"**

MR. EDITOR,—How happens it that you have not noticed yourself, or called the attention of your professional readers, to the vigorous tall shoot which has sprung up, within the last six months, from that magnificent specimen of the *"Domei-flora Lauriensis,"*† standing in the garden of Bethlehem Hospital. This young plant has now attained its full height, and, if not cut off untimely, will soon expand into blossom. Upon this event, the Governors of the Hospital will give another public breakfast, as upon the occasion of their planting the original stem. Let us hope that the expectations hereof will not all end in smoke.

Yours truly, SYDDIE DE CHIMLIE.

Cobblers'-hall, April 1st, 1856.

P.S.—It is much to be desired that the cultivation of this splendid plant may be continued, regardless of expense, under the present skilful management: there will then remain a probability of our soon seeing another tall sprout rising up in front of the Hospital, or, perhaps, the young plant transplanted to the centre of the lawn in front of the Hospital.

*** We have reason to believe that the tall shaft alluded to is part of the scheme of a warming and ventilating engineer, and was strongly objected to by the architect previously to its erection. We are told that, on the report and at the recommendation of the architect, it is proposed either to lower or remove it.

THE NEW ROMAN CATHOLIC UNIVERSITY CHURCH AT DUBLIN.

THE new University Church is on the eve of completion. The site, near the University House in the centre of the city, being surrounded by houses, and restricted in area, it was resolved to devote the funds chiefly to the interior conformation and adornment of the edifice. The idea of the whole was based on the plan of the Early Italian basilicas. Internally, the main body or nave is 100 feet long by 36 broad (the utmost width of the ground); the height is 40 feet. The "west end" opens by a double colonnade on an ante-church of 20 feet by 35: above this is a gallery or triforium, which extends 25 feet into the western end of the church itself, built on arches and columns of the light and dark Armagh marbles, those of Kilkenny, King's County, &c. The ante-church is approached by an arthex or entrance-hall of large dimensions, extending to the porch in Stephen's-green. The two sacristies are at the eastern end. The architect had to avail himself of every inch of ground, and to make the best of difficulties unavoidable from the position. The lower part of the interior walls is to be covered with marbles of various colours to the height of 15 feet. These are all from Irish quarries. Each side will contain nine large arch-shaped panels, subdivided into rectangular panels, the lunettes containing a series of seven small arches filled with decorations of the mosaic character on gold inlaid grounds. The centre of these contains a saint's figure between sitting angels, and emblematic foliations of various kinds; the meaning of the whole bearing on the present or prospective interests of the University; as, for instance, one of such divisions will contain St. Patrick, the Apostle of Ireland: on the other side are to be sitting angels, bearing the crown, &c. These will be separated by palm-trees in mosaic, while the angels of the lunette present the oak or emblematic vine, sheltering the birds or beasts of the forest. Others will be devoted to St. Thomas of Aquinum, St. Gregory, St. Fiaker, St. Antony of Padua, St. Thomas of Canterbury, St. Laurence O'Toole, St. Bridget, &c. &c. The enclosing arched panel-frame rests on columnar panels, the former being of Cork red, and the columnar portion of Galway-green, with capital of alabaster, but the whole in intarsiature, as the entire wall decorations are surface work. The square intercolumnar panels will be of the King's County and various Armagh grays and browns, divided by Kilkenny black: above the whole will be rectangular panels of Armagh and Galway marbles. The triforium or gallery rests on shafts cut out of monolithic blocks of Armagh, King's County, Kilkenny, and other marbles: most of them are ready for erection.

Above the marbles will run a series of paintings in the fresco manner, which have been executed, or are in course of execution still, at Rome, under the direction of Signor Ferdinando Platneo. These will represent SS. Peter and Paul, and their lives, each in a series of separate compositions, running from end to end of the church. The windows are lifted above these, on one level close under the roof, and filled with white glass, arranged in "bull's-eyes," or lenses, "to impart a jewelly richness to the glass, without either impeding the light or interfering with the effect of highly-coloured pictures and rich marbles below." The roof was made flat, in the old Italian mode, and Mr. Pollen has painted it with flat designs.

The altar is to be of Derbyshire fluor-spar crystals, and alabaster, with enamel paintings in the centre panels. The jewelly surface of this front will accord with the precious materials of which the walls of the church are to consist; and these are all of them, with but few exceptions, national productions. The builder is Mr. J. P. Beardwood, of Dublin, who has executed the windows as well as the masonry, and has undertaken besides the cutting and polishing of a portion of the marbles—those from Connemara. The architect, painter, and decorator, is the lecturer on fine arts to the University. The general proportions were given by the rector, who is founder of the church.

There will be seats for above a thousand of the public, and a limited number of single seats to be secured by the year.

THE ROADS THROUGH ST. JAMES'S-PARK.

WE shall know before long how many of the committee's recommendations are proposed to be carried out. We are glad to find our objection to the removal of the Duke of York's Column is agreed in on all hands. A correspondent, who points out that the greatest amount of obstruction to traffic in the streets of the capital arises from crossings, and that the proposed new road will increase the amount of cross-traffic where Parliament-street and Bridge-street intersect each other, especially if a new thoroughfare is opened through Southwark, writes as follows:—With an entrance at each side of the Duke of York's Column from the West-end, let a broad elevated roadway or promenade be made across St. James's-park, in front of the Horse-guards, with a branch turning to the left through Downing-street, over Parliament-street, and along the terrace close to the Duke of Buccleuch's mansion to the river, giving that mansion, the Terrace, and Downing-street a double entrance; one to the new road above, and another to Parliament-street below. After getting to the river let it either cross directly by a new bridge for the Surrey side, or turn to the right for Westminster-bridge, increasing the width of that bridge and street on the opposite side to meet the increase of traffic. Next lengthen George-street, removing the gate forward, so as to continue the level of the street to the lodge, from whence it would incline, as it now does, along Birdcage-walk; and from between the lodge and the present gate let a broad roadway be made, ascending to opposite Downing-street, where it would meet the promenade. Let there also be a road below, as now proposed, from Stable-yard, St. James's.

The arches over the different roads and streets may be of metal, with stairs leading up from the roads and streets below at the piers.

Miscellanea.

GUN-WADDING FOR THE STAGE.—We still continue to receive communications on this subject, notwithstanding the hint in our last. One or two of these, however, we must notice. Mr. C. F. Dennet forwards us specimens of an invention of his, as a blank cartridge, consisting, he remarks, simply of a *"cork,* powder and metallic foil," which has been tried and found to be effectual. In reference to Mr. Dunn's suggestion of woven or compressed asbestos, Messrs. Deane, Dray, and Co. remind us that the wadding sent us by them some weeks before Mr. Dunn's suggestion appeared, noticed by us on 29th March, was compressed asbestos; but they forget that they did not authorise us to state what it was composed of, but simply alluded to it as a cheap incombustible material. It can be supplied, it seems, at eighteenpence a pound. Our correspondence on this subject must here close.

* First line of a description of the two celebrated statues by Cibber, which stood on the portals of old Bethlehem Hospital.

† President of Bethlehem Hospital, Sir Peter Lauric.

Archæological Institute.—At the meeting, on April 4th, Mr. Impey communicated some notes "On Antiquities found in Dunster-court, Throgmorton-street."—Mr. Scharf gave an account of the painted glass in Fairford Church, Gloucestershire. After investigating the traditions connected with the church, he spoke of the disappointment he felt in the glass upon first inspection, as far as design and execution are concerned. The great west window, devoted exclusively to a representation of the Last Judgment, was, notwithstanding, worth an express visit, if only on account of the exquisite beauty of its colour and arrangement. He mentioned that, at the desire of the congregation, a colossal figure of St. Christopher was recently *scraped off* from the north wall facing the south porch. The church has been repaired by Mr. Loughborough Pearson.—Mr. J. M. Kemble read a paper "On a particular class of Funeral Urns, made in the form of Dwellings."—Mr. Winston described some scarcely known glass in North Moreton Church, Berks, near Wallingford, of the commencement of the reign of Edward II.

A School for Kensington Potteries.—Endeavours are being made to provide Infant and Ragged Schools for the Norland and Potteries District. Our readers are aware of the condition of this locality, and will see at once the desirability of the object in view. Plans have been furnished by Mr. W. Sim, as honorary architect, and the committee are offered a suitable piece of ground to build on at a moderate ground-rent. The amount required for the proposed building is about 600*l.* and the committee earnestly solicit donations; the sum already subscribed and promised amounting only to 245*l.* Mr. Edward Jennings, of 29, Clarendon-road, would give any information required.

The Guild of St. Alban.—Reference was made in our articles on Woking to the Guild of St. Alban, who bury there. We understand that this guild has members in other parts of the country besides London, and at Tamworth a college is being erected (for which Mr. Dudley Male supplied the design) for some of its objects, viz. education of orphans, and a place of retirement for clergy and laymen of the Church of England. A site has been obtained overlooking Tamworth, and formerly the site of a leper hospital, the chapel of which still remains, though it has been used for years past, the chancel as a cottage, and the nave as a cart-shed. A part of the proposed building has been erected.

Buenos Ayres Gas Works.—We learn that the new gas company displays a remarkable activity. Already the mains are laid in a great number of streets, and in many others the trenches are ready for the pipes, which are laid along the sides of the foot-path. The length of different sized mains already laid in the streets amounts to the total of 6,200 yards lineal. The erection of the retort-house, coal-stores, purifying-house, &c. is completed, except the iron roofs, which are now being proceeded with. One of the two large gasholder tanks is entirely finished: the other will be completed in a few days. The retorts are upon the ground, and the furnaces are in a state of forwardness. The gas company have contracted to supply the apparatus and gas for lighting the new theatre, now in course of erection, by means of 1,200 burners. Mr. Wm. Bragge, C.E. is the engineer for the company, and Messrs. Edward T. Bellhouse and Co. of Manchester, are the contractors for the entire works.

Cork School of Art.—There are thirty engineers on the books of this institution, eight carpenters, four cabinetmakers, besides carvers, gilders, modellers, photographers, lithographers, japanners, decorators, house painters, &c. There are four architects, six builders, and ten female teachers. All these are rendering themselves more expert in a trade, or qualifying themselves for a profession. There are about seventy-five, out of 156, to whom the knowledge taught in the school is a matter of the very first moment, as a means of self-elevation and progress.

Glasgow Model Lodging-houses.—The annual meeting of the friends of this institution was held on Monday in last week, the Lord Provost in the chair. The report congratulated the meeting on the continued success of the present lodging-house, although the numbers for this year are somewhat fewer than that of last, which was 45,260, and for this year 43,108. There had hardly been a case of sickness during the year among the lodgers, and this notwithstanding of from fifty to sixty being permanent during the whole year. The institution had not only been self-supporting, but there was a balance of 107*l.* 11s. 4½d. The directors have had laid before them by the Building Committee plans of a new and large model lodging-house, which they expect, when carried out and completed in the new buildings in Carrick-street and Macalpine-street, will prove among the best suited for the purpose of any in the kingdom. The work has been estimated for, it is said, by competent tradesmen.

Ventilation and Window Lights.—The Rev. M. Mitchell, in his report to the Committee of Council on Education, says, on the subject of ventilation and window lights,—"I am persuaded, my Lords, that too much attention cannot be paid to the ventilation of rooms, and their method of lighting; and have constantly to complain of the sensation produced in buildings with high pitched roofs, combined as they generally are with diamond-shaped window-glass. These rooms are mostly ill-ventilated, and the subject seems to be so little understood, that even the plans most highly recommended too frequently fail of success. It is a curious fact that, of the pupil-teachers and mistresses who have failed in health, all, with but one exception, have taught in schools thus constructed."

The Steam-hammer.—A five-ton hammer, of an improved construction, has been in operation for nearly twelve months, at the Bowling Iron Company's Works, partly employed in forging wrought-iron plates for floating batteries. The main feature in this invention, it is said, consists in its having the steam cylinder placed at the back of the hammer-block, where it is bolted between the vertical cheeks of the standards, thus forming a substantial connection and support to the main framing, and effecting an important reduction in the height of the machine, by which means the lateral stiffness is so much increased as to render the use of props and stays unnecessary. In this way the hammer-block can be made of any available length, thereby securing ample length of guiding surface, without increasing the height of the framing.

Discovery of Roman Remains at Barton-upon-Trent.—In a field belonging to the incumbent, the Rev. Mr. Wintour, where other remains have from time to time turned up, the parish clerk, while ploughing last week, struck upon a pavement of geometrical design, in red, white, and blue, and of diced tile mosaic work, "as fresh and beautiful," says the *Notts Guardian*, "as the day when it was laid down, or as we now behold the entrance court of the Roman villa at Sydenham Palace." The area uncovered forms an oblong rectangle, 15 feet by 10 feet, and so placed that the house-front to which the pavement belonged must have faced the south. The centre part, within a brilliant bordering of scroll and other work, is occupied with a great variety of geometrical figures, such as squares inserted diagonally within squares, others of chequered pattern, others trapezial, and all centered in a large ellipse. It is worth noting for behoof of future discoverers, that the field containing this pavement has long displayed the outline and area of this very pavement in the form of a square patch of defective vegetation, in the midst of richer crops; and there are other patches of a similar kind in the same ground.

Fire at Vauxhall Railway Station.—Every building and office belonging to the railway station at Vauxhall has been destroyed by fire, which broke out on Sunday evening last. The station building was upwards of 150 feet long, and 60 feet wide, and was composed entirely of wood, canvass, and paper. The amount and value of property wasted by fire in this country would astonish the population, were it correctly estimated once or twice a year. At present, fires are unusually numerous throughout the whole country, and what is singular, in the majority of instances, the precise cause or origin of the fire is unknown. Has the remarkable prevalence of ozone or electrified oxygen in the atmosphere ever since its equally remarkable deficiency in the cholera season anything to do with it, as at least a predisposing cause?

A People's Park for Wolverhampton.—A public meeting of the working classes of Wolverhampton was held last week, to take preliminary measures for the establishment of a "People's Park and Pleasure Grounds." A committee for the promotion of this object has been appointed. It is proposed to purchase twenty acres of land at a cost of 2,400*l.* and to fence, drain, plant, form walks, seats, and otherwise embellish the park, at a cost of 2,500*l.* more.

Coating Metallic Surfaces with Aluminium.—Mr. J. G. Taylor, of Glasgow, has specified a patent relating to the use of aluminium for coating or plating metallic surfaces, either by the action of galvanism, or by the old system of plating with sheets. It may be also applied for preserving ships' sheathing, as well as for protecting a great variety of metallic surfaces liable to injury from the atmosphere, from gases, liquids, or direct chemical action.

Kirkstall Abbey.—We hear that the Earl of Cardigan, to whom Kirkstall belongs, has appointed Mr. Bloxham to take an architectural survey of the ruins, and within the last few days has intrusted the care of the abbey and precincts to a committee of five gentlemen of the neighbourhood, who hold it under lease for the express purpose of protecting what remains.

Birmingham School of Art.—The modelling classes of the Birmingham School of Art, which have for the past nine months been closed, were reopened on Monday last, under the superintendence of Mr. C. Henry Whitaker, whom the committee have appointed.

The Glass-blowers of Lancashire.—A correspondent of a Liverpool paper says;—"The glass-blowers and gatherers are the worst paid of any men in Lancashire. For many months past their wages have not averaged 14s. a week, and this pitiful sum is principally earned by nightwork. The writer of this was present, on Friday night last, when one of the blowers—a steady, hard-working, sober man—brought home to his wife 10s. for a whole week's work. This man has a wife and family to support by his own industry. The worst feature in the case is, that he has been obliged to work without intermission twenty-four hours at pot-setting, pot-arching, &c. which, properly speaking, is the work of a bricklayer, and for which he has not received one farthing, nor is he likely to have anything."—*Preston Guardian.*

Survey of Tipton: Differences.—Last week, according to the *Wolverhampton Chronicle*, the Board of Health proceeded to the business of the evening, namely, the acceptance of one of the tenders for the surveying and levelling of the parish, which were nineteen in number, ranging from 1,275*l.* to 125*l.*! Ten of the tenders were reserved for further consideration. It was stated that the district to be surveyed for the general plan comprised about 2,300 acres, and 5,300 houses and buildings, besides collieries, ironworks, &c. and contains a population of upwards of 25,000. Two plans would be required—a general plan of the whole parish or district, under the jurisdiction of the Local Board, to a scale of two feet to the mile; and detailed plans of such portions of the parish as shall be required by the Local Board of Health (comprising in the whole about fifty separate sheets), to the scale of 10 feet to the mile, or an inch to 44 feet. The ten tenders selected out of the nineteen were those of Mr. Charles Round, of Tipton, 970*l.* in eighteen months; Messrs. Peacock and Cotterell, of Tipton, for 900*l.* in fifteen months; Mr. W. Fereday, of Wolverhampton, 793*l.* in fifteen months; Mr. G. M. Mills (no residence given), 600*l.* in nine months; Mr. Harkness, Westminster, 600*l.* no time mentioned; Messrs. Hesketh, Homfray, and Homfray, of Westminster, 567*l.* in nine months; Mr. J. A. Bone, of Maidstone, 455*l.* in six months; Mr. M'Cleary, of Cheltenham, 428*l.* in twelve months; Messrs. Mitchell and Fawcett, of Sheffield, 250*l.*; and Mr. J. G. B. Marshall, of Westminster, 231*l.* Messrs. Peacock and Cotterell's tender was ultimately accepted.

Steam Carriages for Common Roads.—A correspondent, "C. C. C." asks "why the many attempts made to run steam carriages on common roads, have *all* failed." Perhaps some correspondent who knows more of this particular subject than we happen to do, may reply to the question. Our correspondent at same time makes a suggestion interrogatively,—"Whether a mode of applying steam or other motive power to carriages intended for roads and streets, by which the pressure would be taken off the wheels, and a direct pulling or pushing action obtained, would be likely to obviate difficulties." A steam carriage was recently invented which was designed to obviate certain difficulties, by carrying along with it its own railway, laying it down and lifting it up as it progressed. What has become of this project, or whether it is still "on the cards," we know not. Steam power, we may here incidentally note, would by no means be desirable as the motor of those simple and inexpensive self-moving vehicles suggested in our pages, for behoof of workmen, clerks, shopmen, and others, with small means, and resident at a distance from their respective occupations.

The Iron Trade.—The quarterly meetings have all been held without any alteration in the nominal prices. The trade, it is alleged, is looking up, particularly since the announcement of peace.

New Entrance to Regent's-park.—It is officially announced that the new entrance to the Regent's-park from Charles-street, Portland-town, will be opened to the public on the 1st of May.

Glaze of Silica over Soft Stone Carvings.—"A Builder" asks "if the new solution of silica would do as a substitute for paint upon stone, and, if so, how it is prepared." His object, however, appears to be not so much to obtain an opaque paint as a clear or transparent glaze. He is aware of the existence of artificial means of hardening stone (such as carved Caen stone chimney-pieces, for instance, which cannot be used unless either glazed, hardened, or painted in some way), but he is inclined to think that if solution of silica would give a glaze to the stone it would better meet the requirements of builders, and enable them to obtain handsome carved stone chimney-pieces at the price of shabby marble ones.

ALARM OF FIRE AT DRURY-LANE THEATRE AGAIN.—Late on Saturday night last, or early on Sunday morning rather, an outcry arose that Drury-lane Theatre was on fire, and the engines were promptly on the scene of alarm. The firemen of the establishment, however, managed, it is said, to subdue the fire ere any great damage was done, the only part burnt through the surface of the woodwork being a beam under the bridge of the first tier of flies. The strangest circumstance of all in connection with the alarm was the fact, that it was one of Phillips's fire annihilators which was alleged to have caused the mischief by exploding while some experiments were being tried with it, in order to test its merits as a fire annihilator, by comparison with the hose of the ordinary firemen, who were not only brought into requisition at the same time in an experimental endeavour to put out the gas burning in the battens over the stage at the end of the performance, but were actually called upon to undo the mischief supposed to have been done by the fire annihilator, the funnel or head of which was blown up in a heated state into the flies, where it lodged under the bridge of the stage, while another part of it knocked down a man, and was projected 35 feet beyond him. The machine, it is said, then threw up such a body of fire, that every one in the theatre apprehended its entire destruction. Several persons were injured, but no other harm was done. Mr. Phillips, the inventor of the fire annihilator, we observe, repudiates the machines made by the company.

THE PROPOSED MONUMENT TO SIR HUGH MIDDLETON.—We learn that the improvement in Claremont-square, Pentonville, is now completed without anything effectual being done towards the erection of a monument to a public benefactor such as Sir Hugh Middleton was. It can never be too late, however, to do such an act of justice to his memory; and we still hope that a memorial of the beneficent founder of the New River Waterworks will ere long be erected in an appropriate locality.

THE HORTICULTURAL SHOW GARDENS AT CHISWICK. — We are glad to hear that a strenuous endeavour is, after all, to be made to retain these delightful réunions of the Horticultural Society of London. Earl Grey's motion in the Society on 31st March last, that the council be authorized to terminate the tenancy of the garden, concluded with a proviso or qualification to the effect that this should be done as soon as possible, "unless such a sum as the council may require for maintaining the garden shall have been subscribed before May 1st." Now many of the members are sanguine in their hopes, that by a general effort and a new organization of the garden, admitting a new class of subscribers, and giving greater importance to the meetings in Regent-street, the exhibitions at Chiswick may be made as popular and profitable as ever they were; and it appears a subscription has been opened for donations which shall only be called for should something like the requisite sum (5,000*l.*) be subscribed. Nearly 600*l.* were thus already offered, up to 7th inst. and it is to be hoped that much more has by this time flowed in; that good use will be made of the short time that still remains between this and 1st May; and that Mr. Booth, the Society's librarian, at 21, Regent-street, will have a busy time of it till then in receiving and acknowledging the requisite offers of conditional subscription. Of the 600*l.* alluded to, the Dukes of Devonshire and Northumberland are each down for 100*l.*

SURREY ARCHÆOLOGICAL SOCIETY.—The Duke of Cambridge has accepted the office of patron of this society.

THE APPROACHES TO NEW RECORD OFFICE.—The house at the corner of Carey-street and Bell-yard is worth sketching: it is twisted and bulged in every direction, and is out of the perpendicular 9 or 12 inches, overhanging the public way. It cannot be less than 200 years old, and has been long since vamped up and covered with that most *charitable* material *compo* to hide its faults. It has for some time past been a law stationer's, but is now vacant, probably from being thought dangerous to live in. As the street is here a most inconvenient narrow gut, and a new line of street is contemplated from the new Record Office and Rolls Court, it behoves the authorities whom it may concern to purchase the property (if not already done), and not wait till a new house is built, for which they would have to pay a large sum as compared with the present. Many similar opportunities are not profited by, as, for instance, two or three years ago, at the corner of Queen-street and Drury-lane, where a vacant piece of ground and two or three miserable little shops might have been obtained, but now a public-house has been newly built, and thus the improvement of that awkward corner, obstructing the great thoroughfare between Long-acre and Queen-street, has been lost. Many more similar cases might be mentioned.

VERBUM SAT.

A NEW DISTRICT CHURCH FOR ST. MARYLEBONE.—The rector of St. Marylebone and some of his influential parishioners announce that they have secured an offer of ground, formerly the site of Calmel-buildings, and a house in Orchard-street, for the erection of a new church, and they are now actively engaged in arrangements for procuring funds to carry the object into effect. Subscriptions are being received by Sir Samuel Scott and Co. of Cavendish-square; and communications by the rector, at 11, Upper Wimpole-street.

ARCHÆOLOGICAL REMAINS AT LOCH SPYNIE.—Some interesting remains, according to the *Elgin Courant*, have recently been uncovered by the margin of Loch Spynie, at Salterhill. These remains are of black oak, and are supposed to have comprised four conduits opening into an oblong tank, lined and floored with oak. The tank is supposed to have been a reservoir for collecting water from the loch for the manufacture of salt.

DRAINAGE OF LONDON.—Apparently not aware that a similar suggestion has already appeared in our pages, "C. F." proposes,—"To place the sewer in the bed of the river, which is still public property, and where any required depth can be had, so that the existing sewers may, with slight alteration at their outlet, be conveyed to it. If this principle be adopted, it might be carried out in various ways, and it is not desired to encumber this statement with unnecessary details, but having regard to the qualifications already stated, the following plan is suggested;—that an iron sewer or sewers should be made, in lengths, furnished with proper inlets, similar to those in drain pipes. Whether one sewer in the centre of the stream would serve for both banks, or whether two sewers of less capacity would be preferable, it is not necessary now to assert: it is suggested that the form for such sewer should be that of the letter D, with the flat side uppermost, thus, ⊔; that the conducting channels from the existing sewers should also be of iron; and where several sewers now enter the river near together, a junction might be formed before entering the main sewer: it is believed that by deepening the bed of the river, where necessary, with dredging-machines, the greater part of the sewer could be laid with comparative ease. Experience has proved that constructions of iron can be brought within closer calculation, both as to cost and time of completion, than those of other materials, and iron mains have been already laid across the Thames by the water companies." Of some of his general observations we may avail ourselves hereafter.

SMITHFIELD.—"W. D." proposes that the present site of Smithfield-market should be open to Charter-house-square, by pulling down one row of houses, which would give the largest area in London, at trifling expense, to the great benefit of the whole of the inhabitants.

A HINT FOR WORKMEN IN POOR HEALTH, who have to rise early, and to walk any great distance before breakfast:—Into the bottom of a tumbler or sugar-basin put the yolks of two eggs (when they are cheap), and mill them up into a froth, with some powdered lump sugar or brown sugar: then fill the tumbler or basin with *boiling* coffee, and you will have a "before breakfast" fit for a king, and on the strength of which you may defy *malaria*, or a *ten* miles' walk. I write this for the "delicate," as health is everything with them, for themselves and families; and it is far better than taking the morning dram or glass of beer; and it is a cheaper and far better tonic than can be purchased at the doctor's shop. Engineers on railways agree that coffee is the very best thing to take early in the morning. Plumbers and painters should drink "pure unadulterated" milk.—PHILO.

TENDERS

For building a rectory-house at Sheepy, in the county of Leicester. Mr. R. Jennings, architect. The old materials to be the property of the contractors:—

	With Hollington stone dressings and hammer-dressed facings.	With Hollington stone dressings and patent pressed bricks from Lichfield.

M. BLASHFIELD, in Patent impermeable Terra-Cotta, at Mill-wall, Isle of Dogs; and sold at No 1, Wharf, Praed-street, Paddington-basin.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Accounts of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

BATH, PORTLAND, and ROMAN CEMENTS GROUND and LUMP HYDRAULIC BLUE LIAS LIME

The LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being excavated in its pure and unadulterated state, from quarries on their own property. The Company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or shipped from their wharf, direct to all parts.—Agents required, and a liberal discount allowed. Orders received by Mr. KIALLMARK, 80, Old Broad-street, City, or by RICHARD WINTER, Cement Works, Dunball, Bridgewater.

TO BUILDERS, CONTRACTORS, SHIPPERS and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.
IN EVERY VARIETY.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that it may can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT.
CHARLES NELSON, having completed his works for the manufacture of the above Cement, can supply Contractors, Builders, &c. with a very superior article. The manufacturing department being under his own immediate superintendence, he can confidently recommend it for all works in which Portland Cement is used, and only requires a trial to insure approbation.
Orders, addressed to
London Depôt, 16, South Wharf, Paddington,
BLYTH, BROTHERS, Sole Agents,
will meet with immediate attention.
Manufactory Emscote Mills, Warwick.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of their best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

PORTLAND and BATH CEMENTS.
TATHAM and CO.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel street, Liverpool.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be altogether avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster decorations, and where it is used with Size. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK, LONDON—PATENT. And when so marked, the quality is guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brick-work, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

FRONTS of HOUSES. — GREENE and CO.'S PORTLAND CEMENT WASH will not vegetate, and equal to Oil Paint for durability. In casks of 1 cwt. for 10s.
DAMP WALLS GREENE and CO.'S OXIDE SOLUTION PAINT, a guaranteed remedy, sold in quantities to cover 300 square feet, for 12s.—To be had only of the Inventors, GREENE and CO. 22, Norfolk-street, Islington.

BLUE LIAS LIME.—CHARLES NELSON begs to inform Engineers, Architects, Contractors, Builders, and the Trade in general, that he is prepared to supply direct from the Works in his own boats to any part of the Thames, River Lee, on any canal or by rail to all parts of the kingdom, large quantities of the above GENUINE HYDRAULIC LIME now so extensively used.
Quality, Weight, and Measure may at all times be strictly relied on, references in proof of the above can be given.
N.B. The Captain of the Boat will always bring with him the Grand Junction Canal Note, from which the contractor will be enabled to know exactly what weight of Lime he is paying for.
All orders addressed to the—
LONDON DEPOT, 16, SOUTH WHARF, PADDINGTON.
BLYTH, BROTHERS, SOLE AGENTS.
Will be promptly attended to, and any further information can be obtained from them
Works, Stockton-field, near Southam, Warwickshire.

PLASTER of PARIS.—MESSRS. BLYTH, BROTHERS beg to acquaint the trade, that they have made a considerable reduction in price; the quality they are now manufacturing cannot fail to give entire satisfaction. Samples and prices forwarded to any part of England, or the metropolis. No extra charge made to any wharf or railway station in London. Any further information can be obtained at their Works, Baldwin's-place, Gray's-inn-lane, Holborn; or at the Blue Lias Lime Depôt, 16, South Wharf, Paddington.

GREAVES'S BLUE LIAS LIME, PORTLAND, BATH, and LIAS CEMENTS, at Hanbury, Stockton, and Wilmcote, Warwickshire.—Messrs. GREAVES and KIRKHAW beg leave to inform Engineers, Architects, Contractors, and the trade, that they have completed their works on the Great Western Railway, at Hanbury, they are now prepared to supply any quantity of the above articles, and to deliver to any part of the country, by railway or canal.—Offices, Warwick.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

Also COWLEY and KENT STOCKS, in any quantities.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the five bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at FADDY'S Brick-fields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock and to judge for themselves.
Malm Pale, half-washed Stocks, and Place Bricks, also on sale These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brick-fields, Grange-walk, near the Rosemary Branch, Islington.
N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubble, for brick making, Flints for building and pottery work, Foundry Loam, Whole Whiting, Whiting Sand for whitening, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brick making, &c. &c. sent up barge from Messrs. MEEson and CO.'s Wharf at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 300 to 600 tons can load alongside the wharves at Grays. At MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above-named articles can also be procured, as well as all kinds of fire goods (both Welsh and Newcastle), Fire-clay, Flare-burnt Lime, and Marble and Pemper Lime, and here lime is packed in hogsheads, casks, jars, &c. for exportation.
General Office—No. 12, GEORGE-YARD, LOMBARD-STREET. Letters addressed to Grays Essex, will meet with immediate attention.

WHITE SUFFOLK and RED FACING BRICKS
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE, 3, ADELAIDE-PLACE, London-bridge.

IMPROVED BRICK and QUARRY-PRESSING MACHINES, made by THOMAS PORTER, LONDON-ROAD, Leicester.—T. P. begs to inform Architects, Builders, Brickmakers, and Others, that he is now engaged in making very superior PORTABLE BRICK-PRESSING MACHINES, at considerably reduced prices. The boxes are lined with brass.
For design of Press, refer to "The Builder," January 12, 1856.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of fine superior quality to hand-made, with 4-horse power; one man to feed the machine with clay, and boys to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 1-4, 1856.—Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

BRICK and PIPE MACHINES, manufactured by PORTER, HINDE, and PORTER, Engineers, Carlisle. The manufacturers invite attention to PORTER'S and THE AINSLIE CO.'S PATENT MACHINES for making solid and other Bricks, Quarls, Tiles, Cornices, Socket and Plain Pipes, &c. which they recommend as best adapted for producing good bricks or pipes where quantity is an object.
These machines produce articles superior to any hitherto made by other methods; they are simple in their construction, and not liable to get out of order. They are being largely adopted by brickmakers in one brickfield near London there are eighteen of the Ainslie machines in use.
The manufacturers particularly direct attention to the combined PUG and BRICK MACHINE, as being capable of pugging the clay with less power and of producing the largest number of good bricks of any machine yet offered. This machine was tried at the last meeting of the Royal Agricultural Society of England, when it pugged and moulded at the rate of 1,800 bricks per hour, and was commended by the judges; and at the late Paris Exhibition the jury awarded for it a first-class medal.
This machine may be seen at work at Carlisle. The following is from the *Times* of July 26, 1855:—"A very high opinion was formed of the value of this machine by those who witnessed its performances to-day."

BRICKFIELD, near the three cemeteries, Brown's Wells, Finchley.—TO BE LET, upon very moderate terms the above FIELD, containing 8½ acres of good brick earth. For terms and other particulars, apply to Mr. A. RICHARDS, Auctioneer, Tottenham.

BRICKFIELD TO BE LET at TOTTENHAM, containing 8½ acres of excellent malm earth, situated by the side of the Ware road, 4½ miles from London. The bricks made in this field have always found a ready sale.—For terms and other particulars, apply to Mr. A. RICHARDS, Auctioneer, Tottenham.

TO STONE-PIPE POTTERS AND OTHERS.
WANTED to PURCHASE, a PIPE-MACHINE, with Dies, complete, to make up to 12 inches; also, a PUG-MILL. Any one having the same to dispose of, may hear of a purchaser, by stating full particulars as to price and maker's name, to C. FOX, 46, Great Prescot-street, Goodman's-fields, London.

POTTERY for FRANCE.—A Gentleman who has lately become the owner of a field of very fine POTTER'S CLAY, at Folkestone, recently discovered, wishes to DISPOSE OF the whole or any part of the earth may be had of Mr HOLLINSHED, 11, North-bank, Regent's park.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street, North City-road Basin. Secondly, that the trade term, "Terro-Metallic," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 581, of the last Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES, either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 1, Adelaide-place, London-bridge. Having been app inted by the Patentee SOLE AGENT for the SALE of the ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the latter is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvertoft, near Rugby; or in London, Gloucester, or Bridgewater.
Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

TUDDENHAM, IPSWICH, BRICK AND TILE WORKS.

EXPOSITION UNIVERSELLE
de 1855.

Medaille de 2me Classe awarded to JAMES LUFF, for Specimens of Ornamental Bricks and Tiles.

JAMES LUFF

Begs to inform Architects and Builders that he MANUFACTURES all KINDS of ORNAMENTAL BRICKS and TILES, Red and White, for Chimney Shafts, Ridge Crests, Cornices, and Mouldings.

Also, all KINDS of ORNAMENTAL VASES, CHIMNEY-POTS, MALT-KILN TILES, DRAINING-PIPES, and TILES of every description.

N.B. Builders furnishing detailed drawings can have all sorts of Ornamental Designs executed.

LOOKER'S PATENT IMPERISHABLE GROUND INDICATORS.

A

Considerable difficulty has arisen among the various Burial Boards, appointed under the New Burial Acts, as to the best and most economical method of marking the different grave spaces, in the Cemeteries that have already been opened.

This apparent want has suggested the idea of EARTHENWARE MARKS, or INDICATORS, of the form shown in the accompanying Engravings.

A is a sketch of the Patent Indicator, and B represents it as fixed in the ground.

The Indicators are made hollow, in well-burnt red or other pottery, with a thick sloping top, on which are impressed any letters or numbers that may be required. The lower part of the Indicator has openings, which give it a firm hold in the ground.

The advantages which these Marks possess need scarcely be mentioned. They will remain in the ground for centuries, unaffected by damp or change of atmosphere; and the figures, &c. being impressed, are as durable as the Indicator itself. They occupy but little space, while a broad view is presented of the impression on the top. And the expense of these Indicators is not a third of that of Marks made in other perishable materials.

The Patent Indicator can be made of any shape or size applicable to every purpose for which a mark in the ground may be necessary.

*** *A limited number of Licenses will be granted to respectable Manufacturers.*

B

Further Particulars and Prices may be obtained, and Specimens seen, on application to

BENJAMIN LOOKER, JUN.
INVENTOR, PATENTEE, AND MANUFACTURER, KINGSTON-ON-THAMES.

GREAT REDUCTION IN PRICES OF DRAIN-PIPES.

TO THE METROPOLITAN BOARD OF WORKS, DISTRICT BOARDS, BOARDS OF HEALTH, TOWN COUNCILS, IMPROVEMENT BOARDS, SURVEYORS, AND BUILDERS.

THE BRANKSEA POTTERY and CLAY COMPANY are prepared to supply all descriptions of Glazed Drain-pipes, Bends, Double and Single Junctions, Cloe-et-pans, &c. Also, Terra-cotta Chimney-pots and Fire-bricks of a very superior quality at moderate prices.

N.B. A LIBERAL DISCOUNT TO THE TRADE. A LARGE ASSORTMENT OF GOODS CONSTANTLY ON SALE.

The clay obtained from the pits on the island of Branksea is of the finest quality, and the goods are manufactured by men of long experience in the trade, with the aid of powerful machinery. The articles offered for sale will be found to bear comparison with the best goods manufactured in any part of England.

A list of prices forwarded free on application to Mr. T. G. BECK, at NEW WHARF, No. 6, Little Abingdon-street, adjoining the New Houses of Parliament; or to Mr. R. PETTS, at the Works, Branksea Island, Poole, Dorset.

AYLESFORD POTTERY COMPANY,

BELVEDERE-ROAD, LAMBETH.

MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

The above Company having now been in existence for nearly six years, and having during this period supplied DRAIN PIPES, &c. to some of the largest Works in and around London, viz.:—The New Cattle Market, Wellington and Chatham Barracks, Deptford Dockyard, Her Majesty's Commissioners of Works, &c. and in all instances parties using them expressing themselves satisfied therewith,—take this as a fair test of the quality of the articles supplied by them; and as they now feel themselves established as Potters, beg to offer their goods to Contractors, the Trade, &c. of a first-rate quality and manufacture, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERS' ASSOCIATION.

By Royal Letters Patent.

THE COSMOPOLITAN GLASS COMPANY, 296, Oxford street.

HELY and WARING, Managers.

TO ARCHITECTS, BUILDERS, AND DECORATORS.

STAINED GLASS WORKS, 1, Arlington-street, Camden-town. Designs and estimates furnished for every description of painted, stained, and embossed glass, on application to W. M. BELL, Glass Painter, as above.

Manufacturer of white enamelled letters for street names, &c.

ORNAMENTAL WINDOW-GLASS.—The Trade is respectfully informed that engine-turned and other patterns of ENAMELLED GLASS, hitherto supplied through Mr. CHARLES LONG, may now be had direct from the Works of W. H. JAMES, inventor and sole producer, 37, High-street, Camden-town, London.

WINDOW GLASS, flattened sheet, in cases of 100 and 300 feet, various sizes, one-eighth inch thick, of very superior quality. The trade supplied, by S. E. PACK BARBER and CO. Merchants, 35, West-street, Smithfield.

PLATE-GLASS.—Builders can be supplied with PLATE-GLASS of any size AT VERY REDUCED PRICES on application to the SOHO PLATE-GLASS COMPANY, 20, Soho-square

TO ARCHITECTS, BUILDERS, AND OTHERS.

FRANCIS, RICKABY, and DUNN beg to call the attention of the above to their IMPROVED REVOLVING WOOD and IRON SHUTTERS; also, to their extensive assortment of BRASS and other METAL SASH BARS, STALLBOARD PLATES, &c. F. R. and D. having erected new and powerful machinery for the sole manufacture of the above, are enabled to offer them at a considerable reduction of price.—Prospectuses can be had or forwarded, on application to 34, Gray's-inn lane, Holborn.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.—Workshop, 110, Broadwall.

J. FISHER, 70, YORK-ROAD, LAMBETH, formerly shop foreman to Messrs Lawrence, Shop-front Builder and Manufacturing Joiner to the Trade, 1½ and 1¼ four-panel doors from 6s. each; 1½ sashes and frames from 7d. per foot; 2 inch ditto from 8d. Windows fitted with Gribbon's Patent Hinges for cleaning, painting, &c. All kinds of joiners' work estimated for according to design.—A list of Prices sent on application.

A. The Union Joint. B. The Joint as applied to connect the Pipe and Basin.

SPRATT'S REGISTERED FLEXIBLE JOINT, which supersedes the ordinary clumsy and inferior method of making the connection with the lavatory pipe and Water Closet Basin. The advantages derived by using this Joint, consist of the certainty of making a sound joint. The connection is easily made in a few minutes' time. Should the basin ever require removal, the joint will remain perfectly intact, an advantage invaluable where the closet is fixed on an upper floor, thereby preventing injury to the ceiling below. THOMAS SPRATT, Builder and Engineer, Vassall-road, Kennington.

EXTENSIVE REDUCTION IN PRICES.

KINSON POTTERY AND CLAY WORKS, POOLE, DORSET.

DEPOT, 2 AND 3, HIGH-STREET, LAMBETH.

PATENT DRAIN-PIPES, UNGLAZED, manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.

PRICES

3 inch bore, in 2 ft. 6 in. lengths, at					3d.	per foot.
4	"	"	"	"	4d.	"
6	"	"	"	"	6d.	"
9	"	"	"	"	9d.	"
12	"	"	"	"	1s. 3d.	"
15	"	"	"	"	2s. 6d.	"

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by the manufacture, and it is well known, that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.
W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing, with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 22, Old Fish street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 23s. and perfect action guaranteed.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.
LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 2.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.
The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.
Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.
THOMAS LAMBERT and SON,
Brass and Iron Founders, Short street, New-cut, Lambeth.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE, also TY BAILS cheap on the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 11, Fore-street, City. Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

MR. MARSH has been favoured with instructions from the Directors of the South-Eastern Railway Company, to SELL by AUCTION, at the FOUNTAIN HOTEL, Canterbury, on SATURDAY, APRIL 26, at TWO for THREE o'clock in the afternoon, a portion of the SURPLUS PROPERTY belonging to the Company on the Minster and Deal Branch, comprising rich and productive FREEHOLD MEADOW LAND, at the Minster Station, very eligible closes of freehold accommodation Meadow and Garden-Ground, adjoining the town and borough of Sandwich; freehold Arable Land, near the town of Deal; and various pieces of Meadow and Pasture Land in the parishes of North and Woodnesborough, in the county of Kent. The whole of which is freehold, and each lot will confer a vote for the county.—May be viewed, and particulars, with conditions of sale, obtained at the Fountain Hotel, Canterbury; and at various Stations on the Minster and Deal Branch; at the Canterbury, Ashford, and Ramsgate Stations; of Mr. EDWARD RYDE, Surveyor to the Company, at his Offices, London-bridge Terminus; and at Mr. MARSH'S Offices, 2, Charlotte-row, Mansion House, London, or will be forwarded on application.

FREEHOLD BUILDING LAND, HOLLOWAY.—TO BE SOLD, or LET, about EIGHTEEN ACRES, in large or small Plots.—Apply to Mr. PEACHEY, 17, Salisbury-square.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 3, Danes-inn, St. Clement's, Strand.

FREEHOLD LAND.—TO BE SOLD, about 60 Acres of valuable FREEHOLD LAND in Streetham parish, adjoining the property of Dulwich College, offering the most eligible building sites.—Apply to F. B. NEWMAN, Esq. Architect, 12, Furnival's-inn.

FREEHOLD GROUND, Fetter-lane.—The Commissioners of Sewers of the City of London hereby give Notice, that they will meet in the GUILDHALL of the said City, on TUESDAY, the 29th of APRIL next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for taking on BUILDING LEASE, for eighty years, certain PLOTS of GROUND, situate at the south-east end of Fetter-lane. Further particulars may be had, and a plan seen, on application to Mr. HAYWARD, Engineer to the Commissioners, at their Offices in the Guildhall. The Commissioners will require a plan and elevation of the Premises proposed to be built to be submitted to them for approval; and do not bind themselves to accept any proposal unless deemed advantageous. JOSEPH DAW.

Sewers Office, Guildhall, March 4th, 1856.

FREEHOLD ESTATE at HACKNEY, near the Railway Station, where trains and other conveyances start for the City every quarter of an hour.—TO BE LET, in plots averaging 150 feet deep, on building leases for ninety years, land-tax redeemed. The roads and sewers are wholly completed, and the property situate on a fine gravel soil, in a most eligible position for villas, family residences, and shops.—For terms and particulars apply to Mr. HERING, Architect, 38, Duke-street, Portland-place; or Messrs. GRAY and SON, Estate Agents, Church-street, Hackney.

FREEHOLD BUILDING LAND for 100 HOUSES TO LET or SELL, at Bognor, Sussex, in the Town and facing the Sea. The air, neatness, respectability, good roads and drainage, its proximity to Alnwick, Arundel Castle, Goodwood, Chichester, and the Isle of Wight, make it the most eligible watering-place on the coast for genteel families.—Apply to Mr. TATE, Bognor, Sussex; or 18, Warwick-street, Golden-square, London.

FREEHOLD BUILDING LAND wanted, to purchase or lease, in the neighbourhood of Lee or Lewisham.—Particulars to be sent to Mr. BARLOW, 11, Portman-street, Portman-square.

FREEHOLD GROUND WANTED.—WANTED, a PLOT of GROUND, about 120 feet by 100 feet, in an eligible situation, within two miles north of University College, London.—Direct, stating terms, &c. to Messrs. COLLS, Builders, Camberwell, Surrey.

TO BUILDERS.

LEE, near BLACKHEATH.—FRONTAGES TO BE LET, for detached or semi-detached villas, on the Belmont Estate. This estate contains the finest sites for building purposes anywhere round London, and good villas are in great demand, on account of the situation being lofty, dry, well drained, and exceedingly healthy. Assistance will be afforded to responsible parties.—For particulars, apply to Messrs. T. and C. W. TODD, Milner-street, Brompton, London, or Belmont, Lee, Kent; or Messrs. NEELSON and INNES, 6, Whitehall; and of Messrs. KIRKMAN and ENGLEHEART, King William-street, City.

OXFORD.—Valuable BUILDING LAND, to be LEASED on a term not exceeding 99 years. It immediately adjoins the City of Oxford, and belongs to the President and Scholars of St. John's College. The land is proposed to be let in large or small quantities, for the erection of private residences, and builders, speculators, and others may obtain allotments on such terms as will insure peculiar advantages, as it is well known that genteel residences are much wanted, and in daily request. It is most healthily situated on a fine bed of gravel, has springs of pure and excellent water, and good bricks may be obtained within a few hundred yards of the site.—For particulars, apply to Messrs. SECKHAM and CO. 6 and 7, St. Aldate's-street, Oxford.

LEASEHOLDS.—TO BE SOLD, by Private Contract, a very desirable LEASEHOLD ESTATE, consisting of first-class private dwelling-houses, held direct from the freeholder for a long term at low ground-rents, delightfully situated within three miles of the City.—Apply for particulars to Mr CHARLES STROUGHILL, Solicitor, 7, Coleman-street, London.

TO BUILDERS and OTHERS. — An excellent SITE TO BE LET or SOLD, for BUILDING PURPOSES, with a good double frontage, situate in a leading thoroughfare, and in an eligible neighbourhood, well adapted for shops and dwelling-houses, and workshops. The materials of the present erections may be used if sound, in erecting any new buildings that may be approved. Money will be advanced if required by the purchaser, or taken to carry out the undertaking, upon a satisfactory arrangement.—Apply for terms of Messrs. HOWARD and DOLLMAN, Solicitors, 141, Fenchurch-street; Mr. EDWARD LOWTHER, 58, Red Lion-street, Clerkenwell; or of Mr. MURRELL, Auctioneer, 1, Walbrook, City.

CAMDEN-TOWN CEMETERY BUILDING ESTATE.—TO BE LET, on Building Leases, for Ninety-nine Years, very eligible SITES upon the above estate, having good frontages into Camden-street and Bayham-street, and including frontages to an intended street, to be called St. Martin's-place, and mews approached from Pratt-street. There is a great demand for private houses of the third-rate in this locality, which is enhanced by its near proximity to the North-Western and North-London Railway Stations, and the Hampstead-road.—Plans may be seen and particulars obtained by application to H. E. KENDALL, Esq. Architect, 17, Suffolk-street, Pall-mall East; or to JOHN DANGERFIELD, Esq. Solicitor, 36, Craven-street, Charing-cross.

TO CAPITALISTS, BUILDERS, RAILWAY CARRIERS, AND OTHERS.

CITY of LONDON.—Valuable and extensive FREEHOLD PLOT of GROUND, in the OLD BAILEY, TO BE LET, on a building lease, land-tax redeemed. The ground, now the site of the New Inn, has a frontage to the Old Bailey, with access from Fleet-lane, and occupies an area of nearly 18,000 square feet, which may be increased, if required, to nearly 25,000 square feet. The premises are admirably adapted for an hotel, chambers, warehouses, club-houses, or other buildings, on a large and comprehensive scale.—Plans of the property may be seen, and further particulars obtained, by application to the Counting-house of St. Thomas's Hospital, Southwark; or to Mr. HENRY CURREY, Architect, No. 4, Lancaster-place, Strand.

£45 RENT.—MANUFACTURING PREMISES TO BE LET at UXBRIDGE.—These premises were built for engineering purposes, and well lighted. The shop is about 80 feet long, by 30 feet wide, with a large yard in front, and an eight-roomed dwelling-house adjoining. The railway station is behind, and the canal from Birmingham to London passes in front, presenting an excellent opening for an engineer or an agricultural implement maker.—For further part culars, apply to Mr. JOHN GORDON, 5, Railway-place, Fenchurch-street.

DOWGATE-HILL IMPROVEMENT.—TO BE LET, by Tender, in two lots, on a building lease for eighty years, this desirable frontage, Lot 1, being adapted for a public-house, and Lot 2 for the erection of offices, or otherwise.—For plans, particulars, and form of Tender, apply at the Office of Mr. D. A. GOBBETT, Architect and Surveyor, 37, Fenchurch-street, City. Tenders will be opened at Jerusalem-hall, on the 25th day of APRIL, 1856, at TWELVE o'clock precisely.

BUILDING LAND near a RAILWAY STATION, where Houses are much wanted. FOUR ACRES with Frontage to the south and west, about a quarter of a mile from Grays Station. The Gas main passes along the south front. Other Land with good frontage to the south, and Land adapted for Factories with river frontage, can also be obtained on application to Messrs. MEESON and CO. Grays, Essex. Bricks, Lime, Flints, &c. are very easily obtainable in this neighbourhood.

ELIGIBLE PLOTS of GROUND TO BE LET for building, at Castlebear-hill, seven miles from London, and ten minutes' walk from the Ealing station on the Great Western Railway.—Particulars to be had of G. LESLIE, Upper Mall, Hammersmith.

OLD FORD, near VICTORIA-PARK.—Valuable FREEHOLD BUILDING GROUND TO LET, with Eligible Frontages and advances, admirably situated for fourth-rate houses which are much required in this rapidly-improving neighbourhood, and which let and sell rapidly.—For further particulars apply to Mr. GEO. CLARKSON, Surveyor and Land Agent, 48, Fenton-street, Pentonville.

HOLLOWAY.—Valuable BUILDING GROUND TO LET, with liberal cash advances, to respectable builders, admirably situated for good Villa Residences, which are much required in this favourite and highly respectable locality. The situation is most healthy, possesses beautiful and commanding views, and the access to all parts of London easy. Property in this neighbourhood lets and sells rapidly.—For further particulars, apply to Mr. GEO. CLARKSON, Surveyor and Land Agent, 48, Fenton-street, Pentonville.

TO CARPENTERS AND BUILDERS.

FOR SALE, at a low price, several well-built SIX-ROOMED CARCASSES, near Victoria-park, in a rapidly-improving neighbourhood, where houses of this class are much required, and which let and sell rapidly. To respectable men, cash will be given in exchange for them. Term, 100 years. Ground-rent moderate.—For further particulars apply to Mr. GEO. CLARKSON, Surveyor and Land Agent, 48, Fenton-street, Pentonville.

TO CAPITALISTS, &c.—WESTON-SUPER-MARE, SOMERSET. Important and valuable FREEHOLD LAND for building, in the very centre of the town, and facing the sea, there being a ample space (nearly four acres) for the erection of 80 or 100 houses.—Plans and further particulars of B. GUY PHILLIPS, Esq. Weston-super-Mare.

TO BUILDERS and OTHERS.—SURBITON-HILL, near KINGSTON STATION.—TO BE LET, on Building Lease, for 99 years, with power to purchase the Freehold within a limited period, or SOLD, GROUND for FOUR to 6 HOUSES in front of the road, and room for about Thirty Cottages in Fair Ground, including ground, all for which there is a great demand.—Apply to Mr. HOPKINS, Victoria Inn, Surbiton; or Upper Berkeley-street, Portman-square.

BUILDING LAND at ACTON, near the Railway Station, in a fine open and healthy situation, and plenty of fine water.—Apply to W. F. L. W, Esq. 67, Wimpole-street, Cavendish-square.

TO ENGINEERS, WHEELWRIGHTS, SMITHS, and OTHERS, requiring extensive manufacturing or warehouse premises, suitable alike for investment or occupation, a FREEHOLD ESTATE (near the Eastern Counties Railway Terminus, in Shoreditch), consisting of extensive manufacturing premises, dwelling-house, two cottages, workshops about 100 feet long, large yard, building, &c. TO BE LET or SOLD.—Apply to Mr. TURNBULL, Surveyor, No. 48, Worship-street, Finsbury.

STRATFORD, ESSEX.—Freehold Land within three miles of London, exonerated from land-tax, and free of tithe, TO BE LET on lease for a long term of years, in large or small parcels, for the erection of villas or building purposes. Apply to Mr. W. H. DEAN, Auctioneer and Surveyor, Stratford; or to Mr. GEORGE POWNALL, Surveyor, 37, Bloomsbury-square, London.

MANUFACTURING PREMISES WANTED, comprising about 6,000 feet area of workshops, within two miles of the City. Address letters, post-paid, A. B. 3 Cromer-terrace, Grange-road, Dalston.

OFFICES, WESTMINSTER.—TO BE LET, a capital GROUND FLOOR SUITE of OFFICES, adapted either for professional men, law stationers, or lithographers.—Apply at No. 60, King-street, Parliament-street.

HOUSES of PARLIAMENT OFFICES, Parliament-street.—TO BE LET, capital LIGHT CHAMBERS; new, and built for professional use.—Apply at No. 60, King-street, Parliament-street.

PREMISES WANTED in the CITY.—The CLOTHWORKERS' COMPANY, being about to re-build their Hall in Mincing-lane, REQUIRE TEMPORARY PREMISES for a term of two or three years, for the purpose of conducting the general affairs of the Company, and depositing furniture, &c.—Descriptive particulars and terms to be forwarded in writing, previous to the 23rd instant, to R. B. TOWSE, Clerk to the Company.—April, 1856.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Bros.) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, April 19, 1856.

COMPETITIONS.

TO ARCHITECTS, LANDSCAPE GARDENERS, AND OTHERS.

SCARBOROUGH PUBLIC BURIAL-GROUND.—The Scarborough Burial Board is desirous of receiving Designs, Ground Plans, Sections, Elevations, Specifications, and detailed Estimates for the LAYING-OUT as a PUBLIC BURIAL-GROUND the land selected for the site, containing ten acres, and for erecting thereon two chapels, with lodges and entrance-gates. The whole cost of buildings and entrance-gates not to exceed 2,000*l*. The plan and levels of the ground may be inspected at the Office of the Board, Town Hall, Scarborough, and Premiums of 15*l*. and 10*l*. will be awarded to the two designs respectively which the Board may consider as being first and second as regards merit under the circumstances. Neither of the premiums will be paid unless a Tender be accepted by the Board for the actual execution of the works at or within the stipulated sum of 2,000*l*. The designs and estimates, with motto, and a sealed letter similarly endorsed, containing the author's name and address, are to be sent "To the Scarborough Burial Board," under cover to their clerks, on or before the 14th day of MAY, 1856.
JOHN COOK, } Joint Clerks to the
J. J. P. MOODY, } Burial Board.
Town Hall, Scarborough, April 8th, 1856.

NEW WORKHOUSE for the CITY and COUNTY of NORWICH.—To ARCHITECTS.—The Guardians of the Poor of the Norwich Corporation are desirous of being furnished with PLANS, ESTIMATES, and GENERAL SPECIFICATIONS for the ERECTION of a NEW WORKHOUSE for the City and County of Norwich, on a site near the north entrance to the new cemetery, to contain 1,300 inmates. A lithographed plan of the site, with sections, together with instructions to architects as to the wards, rooms, and offices required, and all other particulars, may be had on written application to me on and after MONDAY, the 28th day of APRIL instant. The maximum sum proposed to be expended in the building is 30,000*l*. The plans, &c. are required to be sent by post, addressed to me, on or before TUESDAY, the 13th day of JULY next.
By order of the said corporation.
Norwich, April 17, 1856. E. C. BAILEY, Clerk.

CONTRACTS.

TO BUILDERS AND OTHERS.

EALING.—A small VILLA and GARDEN-WALLS to be built near the old church. Plans and specification to be seen on WEDNESDAY, APRIL 30, and three following days, at Mr. WHITTINGHAM'S, Elm Cottage, near the new church, Ealing. The quantities supplied. The lowest Tender not necessarily accepted. Tenders to be sent to the Architect on or before MAY 8.
G. GORDON STANHAM, Architect.
St. Alban's Cottage, North end, near Hammersmith-gate.

CONTRACTS.

BOARD of WORKS for the LIMEHOUSE DISTRICT, comprising the parish of Limehouse, the hamlet of Ratcliff, and the parishes of Shadwell and Wapping.—JOBBING CONTRACT for WORKS to SEWERS.—Notice is hereby given, that the Sewers Committee will meet at the Offices of the Board, White Horse-street, Commercial-road East, on MONDAY, the 5th MAY next, to receive TENDERS from persons willing to contract for the JOBBING WORKS and REPAIRS to the SEWERS, DRAINS, &c. under the jurisdiction of the Board, up to Midsummer, 1857. Further particulars may be known, and printed conditions, schedules of works, and forms of Tender obtained by parties it tending to Tender for the works, upon application at the said offices, on and after the 28th APRIL instant, between the hours of TEN and FOUR, upon payment of twenty shillings, which will be returned to each person sending in a Tender. Tenders, sealed up, and endorsed, "Tender for Jobbing Works to Sewers, &c." must be delivered at the said Offices not later than TWO o'clock on 5th MAY, 1856. The Board do not bind themselves to accept the lowest or any Tender. The security of two responsible persons will be required. No Tender will be received after the time specified, and unless strictly in accordance with the printed instructions.—By order,
THOS. W. RATCLIFF, Clerk to the Board.
17th April, 1856.

TO CONTRACTORS, BUILDERS, AND OTHERS.

CLUN UNION. — Persons desirous to CONTRACT for MAKING IMPROVEMENTS in the DRAINAGE of the CLUN UNION WORKHOUSE PREMISES, situate at Bishop's Castle, in conformity with the plans and specifications now lying in the Clerk's office for inspection, are requested to send in Tenders, addressed to the Board of Guardians, at the Workhouse, in Bishop's Castle, on or before the 7th day of MAY next.—By order of the Board.
FREDERIC PARDOE, Clerk.
Bishop's Castle, March 14, 1856.

TO BUILDERS.—Sealed TENDERS, in one specific sum, will be received by the Director-General of Contracts, Pall-mall, London, on or before the 16th day of MAY, 1856, at NOON, for the following SERVICES, at BULL POINT, near Devonport, viz.:—
1. Building a Case-Store, Barrel-Store, Breaking-up-House, Tanks, Privies, &c.
2. Lengthening the Siding of Railroad outside the Magazine Inclosure.
3. Building Cottages for Two Foremen and Five Labourers.
4. Building a Store for Planks, Store for Flannel Cartridges, Foreman's Office, and Printing-press Room, &c.

Detailed specifications of the above four Services, with every requisite information, may be obtained at the Royal Engineer Office, Bull Point, daily (Sundays excepted), between the hours of TEN and FOUR o'clock, from the 26th of APRIL to the 14th of MAY, 1856, both days inclusive.
Royal Engineers' Office, Devonport, April 10, 1856.

TO BUILDERS AND CONTRACTORS

NOTICE is hereby given, that TENDERS will be received by the Director-General of Contracts, War Department, Pall Mall, London, on or before SATURDAY, the 10th day of May next, from Persons desirous of CONTRACTING with the War Department for ERECTING SOLDIERS' BARRACK ROOMS over the Stables, North Square, Brompton Barracks, Chatham. Plans and Specifications of the work are to be seen and Forms of Tender obtained on application at the Royal Engineer Office, Chatham, between the hours of Ten and Four, till the 9th of May next, Sundays excepted. The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately to be bound under a penalty of £1000 for the due performance of the contract. Tenders to be addressed to "The Director-General of Contracts, War Department, Pall Mall, London," and to be delivered free, endorsed, "Tenders for Works at Brompton Barracks, Chatham." No Tender can be admitted after the hour of 10th day of MAY, 1856.
N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

TO BUILDERS AND OTHERS.

SEALED TENDERS for the following SERVICES at DEVONPORT, viz.:—
1. Building Counterscarp of the New Bastion on the right of the Lines, Temporary Bridge, &c. &c.
2. Conducting the Escarp of the Lines from Stoke Entrance-gate to the right shoulder of the Flat Bastion:

For specific sums, will be received by the Director-General of Contracts, Pall-mall, London, on or before the 5th of MAY, 1856. Detailed specifications of the above two Services, and every requisite information, may be obtained at the Royal Engineer Office, Devonport, daily (Sundays excepted), between the hours of TEN and FOUR o'clock, from the 25th of APRIL to the 3rd of MAY, both days inclusive.
Royal Engineer Office, Devonport, 19th April, 1856.

NOTICE to BUILDERS and CONTRACTORS.—ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover district hereby gives Notice, that sealed TENDERS will be received at the Office of the Director-General of Contracts, Pall-mall, London, on or before THURSDAY, the 24th day of APRIL, 1856, from persons desirous of CONTRACTING for RENEWING FLOORS, CEILINGS, STAIRS, &c. at Canterbury Barracks. Drawings and specifications of the works to be executed may be seen by persons fully competent to undertake the work (none others need apply), and forms of Tender obtained at the Royal Engineer Office, Canterbury Barracks, between the hours of TEN and FOUR o'clock, from THURSDAY, the 17th APRIL, to WEDNESDAY, the 30th APRIL, 1856, Sundays excepted. The party whose Tender may be accepted for the work will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of 50*l*. for the due performance of the contract. Tenders for the above work, to be addressed to the Director-General of Contracts, Pall-mall, London, and endorsed "Tender for Floors, &c. at Canterbury Barracks."
N.B.—The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, Dover, 7th April, 1856.

CONTRACTS.

NOTICE to BUILDERS and CONTRACTORS.—ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover District hereby gives Notice, that sealed TENDERS will be received at the Office of the Director-General of Contracts, Pall-mall, London, on or before THURSDAY, the 1st day of MAY, 1856, from Persons desirous of CONTRACTING for LAYING NEW BOARDED FLOORS and GALVANIZED IRON PLATE CEILINGS at WALMER BARRACKS.—A specification of the works to be executed may be seen by persons fully competent to undertake the work (none others need apply), and forms of Tender obtained at the Royal Engineer Office, South Barracks, Walmer, between the hours of TEN and FOUR o'clock, from MONDAY, the 14th of APRIL, to WEDNESDAY, the 30th of APRIL, 1856, Sundays excepted. The party whose Tender may be accepted for the work, will be required to enter into a bond, with two eligible Securities, jointly and separately, to be bound under a penalty of 150*l*. for the due performance of the Contract. Tenders for the above work to be addressed to the Director-General of Contracts, Pall Mall, London, and endorsed "Tender for Work at Walmer Barracks."
N.B.—The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, Dover, 5th April, 1856.

NOTICE to BUILDERS and CONTRACTORS.—ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover District hereby gives Notice, that sealed TENDERS will be received at the Office of the Director-General of Contracts, Pall-mall, London, on or before THURSDAY, the 1st of MAY, 1856, from persons desirous of CONTRACTING for RENEWING SLATING and LEAD WORK, &c. at Canterbury Barracks. Drawings and specifications of the works to be executed may be seen by persons fully competent to undertake the work (none others need apply), and forms of Tender obtained at the Royal Engineer Office, Canterbury Barracks, between the hours of TEN and FOUR o'clock, from TUESDAY, the 15th of APRIL, to WEDNESDAY, the 30th of APRIL, 1856, Sundays excepted. The party whose Tender may be accepted for the work will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of 300*l*. for the due performance of the contract. Tenders for the above work, to be addressed to the Director-General of Contracts, Pall-mall, London, and endorsed, "Tender for Slating and Lead Work, &c. at Canterbury Barracks."
N.B.—The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, Dover, 7th April, 1856.

NOTICE to BUILDERS, CONTRACTORS, IRONFOUNDERS, &c.—The Commanding Royal Engineer of the Yorkshire District hereby gives Notice, that sealed TENDERS will be received at the Office of the Director-General of Contracts, Pall-mall, London, on or before THURSDAY, the 8th of MAY, 1856, from persons fully competent and desirous of CONTRACTING for the undermentioned WORKS, at the places named, viz.:—
YORK BARRACKS.—Taking off the present Roof of Riding School, and erecting over the same a New Wrought-Iron Roof.
LEEDS BARRACKS.—Taking Down present Old Fitments &c. and Renewing with Iron Ones in Three Officers' and Nine Troop Stables; also, Repaving, with Granite, Two Troop Stables.

Specifications of the works to be performed, and forms of Tender obtained at the Royal Engineer Office, No. 5, New Walk-terrace, York, between the hours of TEN and FOUR o'clock, from MONDAY, the 31st of APRIL, to WEDNESDAY, the 7th of MAY, 1856.
N.B.—The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, 5, New Walk-terrace, York, 19th April, 1856.

ORDNANCE CONTRACT.—To BUILDERS and CONTRACTORS.—Sealed TENDERS will be received by the Director General of Contracts, War Department, Pall-mall, London, until TWELVE o'clock on MONDAY, the 5th MAY next, from parties willing to CONTRACT for the ERECTION of a GUARD-HOUSE and PORTER'S LODGE for the Pavilion at the Camp, Aldershot, within five weeks from the date of acceptance of Tender. Plans may be seen, and specifications and forms of Tender obtained, on application to Mr. BAKER, Clerk of Works, at the Royal Engineer Office, Camp, Aldershott. The Tender to be endorsed, "Tender for Guard-house and Porter's Lodge, Pavilion, Aldershott." The War Department reserves the right of rejecting the whole or any of the Tender.
Royal Engineer Office, Aldershott, April 21, 1856.

TO BUILDERS and CONTRACTORS.—Notice is hereby given, that TENDERS will be received by the Director General of Contracts, War Department, Pall-mall, London, until TWELVE o'clock on TUESDAY, the 6th day of MAY next, from persons desirous of CONTRACTING for CONSTRUCTING a NEW SOLDIERS' PRIVY, and a CULVERT to the Soldiers' Bathing-pond, near St. Mary's Barracks, Chatham.—Plans and specifications of the work are to be seen, and forms of Tender obtained, on application at the Royal Engineer Office, Chatham, between the hours of TEN and FOUR o'clock, from the 12th of MAY next, Sundays excepted. The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately to be bound under a penalty of 150*l*. for the due performance of the Contract. Tenders to be addressed to "The Director General of Contracts, War Department, Pall-mall, London," and to be delivered free, endorsed, "Tender for Works at St. Mary's Barracks, Chatham." No Tender can be admitted after the 13th day of MAY, 1856.
N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, Chatham, April 22, 1856.

[*For remainder of Contracts see next page.*

CONTRACTS.

TO BUILDERS AND OTHERS.

NOTICE is hereby given, that Plans and Specifications for ENLARGING, REPAIRING and otherwise altering the parish CHURCH of ST. JAMES, QUEDGELEY, in the county of Gloucester, and the Schools connected therewith, will lie for inspection at the Diocesan Registry Office, Ulaisters, Gloucester, on the 8th of MAY, and five following days; and all persons wishing to CONTRACT for the same are desired to send in sealed TENDERS, directed to J. CURTI HAYWARD, Esq Quedgeley House, near Gloucester, on or before the 17th of MAY. The lowest Tender will not necessarily be accepted. The contractor will be expected, at his own expense, to enter into the usual legal bond, with two good and approved sureties.

TO BUILDERS AND CONTRACTORS

DUDLEY UNION WORKHOUSE.—Builder and Others are invited to deliver TENDERS for the ERECTION of a NEW WORKHOUSE, proposed to be built at Shaver's End, near Dudley, in the parish of Sedgley, in the county of Stafford. The plans and specification may be seen on application from Mr. Joseph Moore, BIRLASTON, Dudley Market place, Wednesday next. Each Tender must be delivered sealed, addressed to THOMAS SMITH, Esq., Clerk to the Board of Guardians, Dudley, and endorsed "Tender for New Workhouse," and must be received on or before the 1st day of MAY next. A separate estimate for the Boundary Fences and Roads must be made agreeably to the form lodged with the plan and specifications, to which reference is to be had for all further particulars. The Board do not bind themselves to accept the lowest Tender.

By order of the Committee,

J. GALPIN, Surveyor.

KNOTTINGLEY GAS COMPANY.—To IRONFOUNDERS, BUILDERS, and OTHERS.—Persons desirous of TENDERING for the CONSTRUCTION of a GASOMETER, and the IRONWORK required by them in the erection of GASWORKS, and also for the delivery of about 170 TONS CAST METAL MAIN. The whole may be tendered for in one sum, or in the following lots, viz.:—The whole of the buildings, walls and tanks, the whole of the cast iron work in apparatus, or the supplying and delivery of the mains.—Drawings, specifications, and forms of Contract, on application to the Secretary; and any further information had by applying to Mr WM WILSON Gas Engineer, Castleford. Sealed Tenders, addressed to J. CARTER, Esq. Knottingley, and endorsed "Tenders for Gasworks," will be received not later than the 10th of MAY next. The Directors do not pledge themselves to accept the lowest or any Tender.

W. S. HEPWORTH, Secretary.

Knottingley, April 21, 1856

TO SCAVENGERS AND OTHERS

THE COMMISSIONERS of SEWERS of the CITY of LONDON hereby give Notice, that they will meet at Guildhall, London, on TUESDAY, the 6th day of MAY next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for CLEANSING the STREETS and REMOVING DUST, &c. from the houses of this City, for the term of one year from Midsummer next, agreeably to the provisions of a specification, a copy of which may be had upon application at the Office of the Commissioners of Sewers, Guildhall; and also to receive PROPOSALS for WATERING certain of the STREETS of the said City twice a day, agreeably to a specification to be seen at the Office aforesaid. Each person tendering for either of the above contracts must sign and seal his Proposal, and must deliver the same, addressed to the Commissioners of Sewers, at the Guildhall aforesaid, on or before the hour appointed for the opening thereof, and must attend personally, or by some person duly authorized by him in writing, at the time and place appointed for opening the Proposals, to make such offer as he may think proper; but no Proposal will be considered unless the person making the same shall have delivered with his Proposal a Bank of England note, or an undoubted Bond, for the sum of £200, as a security for the due performance of the Contract, which sum will be immediately returned to each person whose Tender is not accepted; and will be returned in the other cases until the contracts are duly entered into.

JOSEPH DAW, Principal Clerk.

Sewers Office, Guildhall, April 16, 1856

MANCHESTER and SALFORD BATHS and LAUNDRIES COMPANY.—To MECHANICAL ENGINEERS, CONTRACTORS, &c.—The Directors hereby give notice that they intend to erect NINE SETS of NEW BATHS and WASH-HOUSE APPARATUS, with the Boiler, Engine, Pumps, Machinery, Steam Washing Apparatus, Drying Closets, Lavatories, and other Fittings, and will be ready to receive TENDERS for the same, and for the Buildings, Fittings, and Fixtures connected therewith, at the Office of Mr. WORTHINGTON, Architect to the Company, 54, Ridgefield, Manchester, on or before FRIDAY, MAY 9, at 11 o'clock. Tenders to be sent in by that time, and the Directors will meet on the following day, FRIDAY, MAY 9, at 12 o'clock, to open and consider the Tenders.

By order of the Board,

JOHN ELLMAN, Secretary.

Manchester, April 5, 1856.

WORTHING SEWERAGE.—To CONTRACTORS for SEWERAGE WORKS.—The WORTHING LOCAL BOARD of HEALTH are prepared to receive TENDERS for the COMPLETION of the SEWERS of the said Town, and WORKS connected therewith. Plans and specifications may be seen at the Offices of Mr. DENNETT, Solicitor, Clerk to the Board, No. 5, Bedford row, Worthing, on and after MONDAY, the 21st Instant, between the hours of 10 and FOUR. Duplicate forms of Tender will also be supplied, price 2s. each, and full particulars will be given, and the works pointed out on the ground, by Mr. HENRY ROBERTS, C.E., Resident Engineer, 3, Victoria-place, Pimlico, London, to whom application may be made. Each Tender must be delivered, sealed up, addressed to the Board, at the Office of Mr. DENNETT, aforesaid, on or before MONDAY, the 5th day of MAY next, and endorsed "Tender for Sewerage Works," and must be accompanied by a Deposit of £100 in money or approved Bankers' Bills, as a guarantee of the bona fides of the Tender. The Board do not bind themselves to accept the lowest Tender.

WM. HIGH DENNETT, Clerk to the Board.

Worthing, April 12, 1856.

CONTRACT for REMOVING DUST, &c.—The Vestry of the Parish of Saint John, Hampstead, are prepared to receive TENDERS from persons who may be willing to enter into CONTRACT for the REMOVAL from the Houses and Premises, Dust, Ashes, Cinders, Rubbish, Soil, and Refuse, from the Areas, Houses, Privies, and other ways, roads, streets, squares, mews, courts, and other places within the limits of the Parish of Saint John's Wood, West End, and Kilburn District; and within the limits of District No. 2, called the North East or Hampstead District, from the date of the Contract to the 24th day of JUNE, 1857, agreeably to the specifications to be delivered to Tenderers and subject to the conditions of Tenders to be had at the Vestry Office, at the Workhouse, New Road, Hampstead. The Vestry do not bind themselves to accept the lowest or any Tender. Tenders must be delivered in the printed form, to be obtained at the Surveyor's Office, sealed up, and addressed to the Vestry of St. John Hampstead, and endorsed "Tender for Dusting, District No. 1," or "District No. 2" (as the case may be), and must state the names and description of two sufficient Sureties for the due performance of the Contract, as directed to the Vestry of St. John Hampstead, indorsed "Tender for Dusting, District No. 1," or "District No. 2" (as the case may be), are to be sent or delivered to the Vestry Clerk, at his Office at Hampstead Workhouse, not later than TWELVE o'clock at NOON, on FRIDAY the 2nd of MAY, 1856, as forms to tender must attend personally at the Vestry Room of the Workhouse, precisely at 11 minutes past SEVEN o'clock in the EVENING of the same day.

By order, THOMAS TOLLER, Vestry Clerk.

CONTRACTS.

TO BUILDERS.

PERSONS desirous of CONTRACTING for TAKING DOWN and REBUILDING the PARISH CHURCH of KILBY, in the county of Leicester, may see the drawings and specifications at the office of Mr. HENRY GODDARD the Architect, Bowling-green-street, Leicester, from MONDAY, the 28th inst. until TUESDAY, the 5th of MAY. The Committee do not bind themselves to accept the lowest Tender.

April 22 1856

TO BUILDERS

PERSONS desirous of TENDERING for a VILLA, or VILLAS, to be erected on the "Gold Tops," Newport, may see the plans and learn about it the Offices of the Architects, Messrs WIGG and HABERSHON, Bloomsbury-square, London; or Kingshillfield, Newport, on or after TUESDAY next. Also for a HOUSE, to be erected in Stow-hill, Newport. Drawings and specification may be seen as above. Tenders will be opened at Newport, on THURSDAY, the 8th of MAY, at TEN o'clock precisely.

N B The Architects do not bind themselves to accept the lowest, nor any of the Tenders, in either case

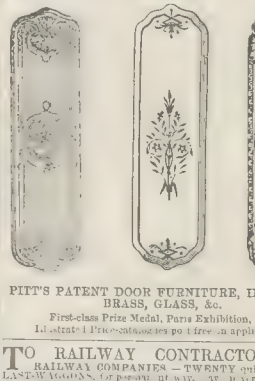
TO CONTRACTORS

TENDERS are WANTED for the CONSTRUCTION of a GRAVING-DOCK, with TIDAL BASIN and WHARFS, upon the lands of Meadowside, near Govan, for Messrs TODD and M'GREGOR, according to plans and specifications, which will be open to view, at the Works at Partick, after the 1st of MAY. Further particulars may be obtained from the Engineers, Messrs. BELL and MILLAR, at their Office, 81 Vincent place, and from the person who will be in charge at the Works at Partick. Tenders to be sent out addressed to Messrs TODD and M'GREGOR, at their Office in Glasgow, on or before the 16th day of MAY. The lowest offer, or any of the offers, may not be accepted.

CHORLEY IMPROVEMENT.—CEMETERY. To BUILDERS and CONTRACTORS. The Chorley Commissioners, acting under "The Chorley Improvement Act, 1851," hereby give Notice, that they are prepared to receive TENDERS for the ERECTION of the CHAPELS and ENTRANCE LODGE. The drawings and specifications may be seen, and further information had, at the office of Mr JAMES DERHAM, Surveyor to the Commissioners, Chorley, on and after FRIDAY, the 25th instant.—Sealed Tenders, addressed to [illegible] Chorley, to be delivered at the Town Hall, Chorley, on or before TUESDAY, the 6th day of MAY next, at TWELVE o'clock at noon precisely, will be received by the Chairman of the Cemetery Committee, and endorsed, "Tender for Cemetery Chapels and Lodge."

RICHARD JACKSON, Clerk to the Commissioners.

Chorley, April 15, 1856



CONTRACT for SLOPPING.—The Vestry of the parish of St. John, Hampstead, hereby give notice that they are ready to receive TENDERS from parties who may be willing to CONTRACT for the REMOVAL of all SOIL, Slush, Snow, Ice, Straw, Litter, Refuse, Slop, Dust, Mud, and other matter from which they may be sought to be otherwise separated together upon or in the carriage ways and footways in the several streets, roads squares, mews, courts, and other public passages or places within the limits of District No. 1 in the said parish, called the South-west or St. John's Wood, West end, and Kilburn District; and within the limits of District No. 2, called the North-east or Hampstead District, from the date of the Contract to the 24th day of JUNE, 1857, agreeably to the Specification and Forms of Tender and Contract to be seen and had between the hours of TEN and FOUR, at the Surveyor's Office, at the Workhouse, New Road. The Vestry do not bind themselves to accept the lowest or any Tender. No Tender for less than either the Districts, or their parts from to the Parish of the Surveyor's Office, and the proposed Contractor and certain sufficient names and description of two sufficient securities for the due performance of the Contract, addressed to the Vestry of St. John's Hampstead, indorsed "Tender for Slopping, "District No. 1," or "District No. 2" (as the case may be), are to be sent or delivered to the Vestry Clerk at his office at Hampstead Workhouse, not later than TWELVE o'clock at noon on FRIDAY, the 2nd of MAY, 1856; and parties tendering must attend personally at the Vestry to be held at the Workhouse, precisely at half-past SEVEN o'clock in the evening of the same day.—By Order. THOMAS TOLLER, Vestry Clerk.

WANTED, Five or Six Second-hand DOUBLE-PURCHASE CRABS, equal to four tons.—Address RANDELL and SAUNDERS, Bath-Stone Office, Corsham, Wilts

HART AND SON,

IRONMONGERS AND MANUFACTURERS,

53, 54, 55, & 57, WYCH-STREET, STRAND, London.

PITT'S PATENT DOOR FURNITURE, IN CHINA, BRASS, GLASS, &c.

First-class Prize Medal, Paris Exhibition, 1855.

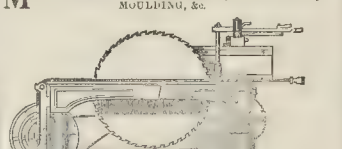
SHAW, Railway Carriage Inspector, at Railway, Ballast and Stores 64, Cannon-street, City.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT. The public are respectfully informed that arrangements have been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and discomfort from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office, 145, Regent-street, London.



ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment, where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. opening to the Monument, London-bridge. Established A.D 1700.

BATHS and HOT-WATER APPARATUS. J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c. to be had on application. Estimates and Plans for Fixing given. J. TYLOR and SONS, Manufacturers, Warwick-lane, Newgate-street, London

HEATING BY  HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be efficiently warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Tenoning, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they continue their attention to this sort of machinery, and have had the honour to supply some of the most eminent railway companies and contractors in the world with their Machines for home and foreign use.

STEAM FRET-CUTTING WORKS.—To BUILDERS, CARPENTERS, CARVERS, CABINET and PIANOFORTE MAKERS, and CHAIRS-MENDY and Co. Established twelve years, Rotherham-street-road. Every description of fret and other open work cut in a superior style, with or without the aid of shaping. Barrel patterns for founders, devices for illuminations, &c. cut in any thickness.

TO BE SOLD, a WOOD PLANING-MACHINE, in good working order, capable of planing, tenoning, grooving, and rebating boards, &c. Application to be made to Mr. BRIAN BURDON, SAW MILLS, Newcastle upon-Tyne, where the machine may be seen at work daily. As the premises are required immediately, to make room for one more powerful, an early application is requested.

W. and C. BURNUP, Newcastle upon-Tyne.

TO STONEMASONS, BUILDERS, and OTHERS.—A TRAVELLER for SALE, complete, nearly new, 13½ feet long, 41 feet wide, and 10 feet high. Near Stratford, Essex; with about Thirty Loads of Timber in Frame.—For further particulars apply at the premises, THOMAS GEORGE and SON, Timber Merchants, Stratford, Essex.

212° MILNER'S HOLDFAST and FIRE-RESISTING SAFES non-conducting and vaporized with all the improvements, under their Quadruple Patents of 1853-54 and 1855, and held on their Gunpowder Proof Solid Lock and Door cushion, with Outside Fastenings.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES

Beyond the current Price of Hoop-Iron.

Gauge.	In. wide.	Per 1,000 ft.
No. 16	1½	7s. 6d.
15	1½	7s. 6d.
15	1¾	8s. 9d.
15	2	9s. 6d.
15	2½	0s. 6d.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 11¼ inches on both sides alternately, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming projected claws, which are so bent, that a direct end grain of the iron is presented longitudinally, offering most powerful and effectual resistance, and which become when built into the brickwork, embedded in the structure, preventing the possibility of longitudinal escape, and a complete and permanent bonding together of the whole building is thereby obtained.

Patentee—FREDERICK TYERMAN, Architect, 44, Weymouth-street.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr BARRETT, 12, York-buildings, Adelphi

CHUBB'S LOCKS, with all the recent improvements; STRONG FIRE-PROOF SAFES, CASH and DEED BOXES—Complete lists of sizes and prices may be had on application

KIMBERLEY'S NEW PATENT FLOORING CRAMP continues to receive the patronage one and all, of every leading Builder Engineer, and Architect, not only in England, but throughout the world. Its simplicity, power, and economy still remain unquestionable, even by the side of its most important rivals, and the steady, annual increase in its sale, is the best proof of it. It is useful in many ways as a cramp, and unlimited evidence can be given that it is a most valuable tool, which no Builder should be without.

London Agents—Messrs. THOMAS PUGH & CO. Wholesale Ironmongers, 13, King-street, Snow-hill, London.

TO BE SOLD, an elegant modern CAST-IRON FOUNTAIN, of first-rate workmanship, 8 feet high, in four tiers of basins; lower basin about 6 feet diameter.—Apply to Mr. KING, Truman's Brewery, Spitalfields.

CRANE TO BE SOLD, capable of lifting Fifteen Tons. Cost 400l. will be disposed of for half the money, the owners having given up the Stone Business.—Address, Mr. NEWTON, Medway Wharf, near Vauxhall-bridge, Pimlico.

CAST-IRON BORINGS. — WANTED, a quantity of good IRON BORINGS.—Address, stating price and quantity, to W. D. Office of "The Builder."

FENDERS, STOVES, and FIRE-IRONS.—Buyers of the above are requested, before finally deciding to visit WILLIAM S. BURTON'S SHOW ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, FIRE-IRONS, and GENERAL IRONMONGERY as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments and two sets of bars, 2l. 18s. to 6l. 18s.; ditto, with ormolu ornaments and two sets of bars, 3l. 10s. to 12l. 12s.; bronzed ornolu ornaments and two sets of bars, 3l. 10s. to 12l. 12s.; bronzed fenders complete, with standards, from 7s. to 3l.; steel fenders, from 2l. 15s. to 6l.; ditto, with rich ormolu ornaments, from 3l. 12s. to 7l. 7s.; fire irons, from 1s. 9d. the set to 4l. 4s. Sylvester and all other patent stoves, with radiating hearth-plates. All which he is enabled to sell at these very reduced charges.

Firstly, From the frequency and extent of his purchases; and

Secondly, From those purchases being made exclusively for cash.

GASELIERS in GLASS or METAL.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers in metal and glass all that is new and choice in BRACKETS, PENDANTS, and CHANDELIERS, adapted to offices, passages, and dwelling-rooms, as well as to have some designed expressly for him, these are ON SHOW over his SIXTEEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his establishment the largest and most remarkable in the kingdom—viz. from 12s. 6d. (two-light) to 18l. 18s.

The alterations and additions to these extensive premises already far the largest in Europe, which occupied the whole of last year, are of such a character that the entire of EIGHT HOUSES is devoted to the display of the most magnificent stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver, Plated Goods, Baths, Brushes and Turnery, Lamps and Gaseliers, Iron and Brass, Bedsteads and Beddings), so arranged in Sixteen Large Show-rooms as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere.

Illustrated catalogues sent (per post) free.

39, OXFORD-STREET; 1a, 2, and 3, NEWMAN-STREET; 4, 5, and 6, PERRY'S-PLACE. Established 1820.

MARBLE and STONE CHIMNEYS.—150 MARBLE CHIMNEYS of various designs and colours, most of them fixed, are now on view at the Cambridge Heath Road Sawing-Mills. The proprietor has again enlarged his workshops, and erected so much improved machinery, so as not only to compete, but is able to manufacture more, and consequently cheaper than any house in the trade.

The Trade supplied.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 243, High street, Southwark near the Town-hall.

CAEN and AUBIGNY STONE.—GATES and GEORGE, late Lory, Beetham, and Co., Caen-wharf, Rotherhithe, London, Caen Stone Merchants and Quarrymen, continue to supply from their Wharf as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, forwarded on application to Bath Stone Office, Corsham, Wilts

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bonsor Slates, Sinks, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

DARLEY DALE STONE.—This Stone, introduced by Sir Charles Barry at St. Edward's Grammar School, Birmingham, and well known as having been selected for

ST. GEORGE'S HALL, LIVERPOOL,

and numerous works, including the Railway Station, Birmingham, Borough Bank, Liverpool; Evesham-bridge; Mr. Beaufoy's Schools, Lambeth; and the Portico and Cornice of the Town-hall, Leeds; is kept in considerable quantity at the Darley Dale Stone Wharf, City Basin, London.—Apply to W. and J. FREEMAN, Millbank-street, Westminster; or GEORGE WALL, at the Quarries, near Matlock.

SLATE.—HONDURAS-WHARF, BANKSIDE.—H. SHEFFIELD has the pleasure of informing the trade, builders, and others, that he has an excellent assortment of the best Bangor Slates, at the lowest prices. Shipping and all orders promptly attended to.—Offices also, 6, Hood-lane, City.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Hertfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of lee-tables, chiffoniers, consoles, &c.; baths, baptistries, altar-tablets, pilasters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.

N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.

ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 21s. to 10 guineas. Slate Cisterns made to any size.—J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex.

GREEN SLATE.—The Green Slate produced from the Tyn-y-Wersiodd Quarries, has been pronounced superior in colour, grain, and cleavage, to any hitherto used. Blue and Purple Slate of the best description.—Apply to Mr. OGILVIE, 1, Cushion-court, Old Broad-street, where samples may be seen; or to Mr. JENNINGS, Pen-y-Groes, near Carnarvon.

POLISHED SLATE BOX CHIMNEY-PIECES, beautifully moulded and trussed.—T. R. HANNAFORD has had a large consignment of the above from an extensive quarry, which having obtained under peculiar circumstances, he can offer at less than two-thirds the usual prices. For Bangor Slate Cisterns, and other work, Roofing Slates or covering, his tariff (which can be had on application) will be found to command universal attention. Trevalga-wharf, Ratcliffe-cross.

GROUND FLINT AND CORNISH STONE, UNADULTERATED.
WILCOX & CO.
FLINT MILLS, MILLWALL, POPLAR.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations,

PER SQUARE YARD.

Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.

Apply to JOHN PILKINGTON, Polonceau and Limmer Asphalte Office, Monument-chambers, 14, Fish-street-hill, London.

N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

CROGGON and COMPANY, Manufacturers of
PATENT ASPHALTE ROOFING,
BOILER, RAILWAY, SHEATHING and INODOROUS FELT.
For Damp Walls, and Lining Iron Houses,
2, DOWGATE-HILL LONDON.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Stock from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS

W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 21 Wharf, Harrow-road, to 9, North Wharf-road, Paddington, have a large stock on sale of Screened Gravel. For terms, &c. apply at the Wharf.

Contractors supplied to any extent.

AT a Meeting of the Quarrymen of the Southowram and Northowram, &c. District, held at the Dusty Miller Inn, in Hipperholme-cum-Brighouse, on the 21st April, 1856, it was unanimously resolved, "That a FURTHER ADVANCE in YORKSHIRE TOOLED PAVING STONE take place from the 1st MAY next."

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring is now in use in Paris and other continental cities, is now introduced into this country; an extensive assortment of specimens and patterns commencing at 1s. per foot superficial, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 9, Charlotte-row, Mansion House; or of Messrs ARROWSMITH and CO. 80, New Bond-street.

TO PAINTERS, BUILDERS, &c.—LIVETT, FRANK, and SON, No. 14, Borough, London-bridge, opposite the Brighton and South-Eastern Railway Stations, quote their present prices for ready-ground oil, as 2s. 8d.; boiled, 2s.; turpentine, 2s. 8d.; oak varnish, 7s. 6d. per gallon; genuine white lead, 23s.; seconds, ditto, 21s.; best town glue, 43s. per cwt.; colours, brushes, &c. equally low.

DECORATIVE PAINTING.—CHARLES RUCKUCK, Decorator to his Majesty the King of Hanover, whose works may be viewed in numerous public and private buildings in the metropolis, most respectfully begs to invite the attention of the nobility and gentry to his considerably increased establishment.—Address, 50, Pall-Mall.—Hours from Nine till six o'clock.

The Builder.

Vol. XIV.—No. 690.

WE find our short notices of the designs for barracks, exhibiting at Burlington House, are absorbing a large share of our space; but we need not extenuate the course we are taking, in that particular,—considering the importance of the subject in points to which we have referred.

Indeed, to state the truth, though we will not deprecate any amount of expectation from us in matters of which it is our business to be cognizant, there are subjects too extensive to be grasped and condensed, in two or three numbers of a periodical: and when we say that the entire range of practical architecture might be considered to be entered upon in the consideration of the barrack competition designs, we express pretty accurately the view which any one will come to, who can devote the necessary time to the drawings and specifications. Our chief reason for this preface to continuation of our notices, and for previous remarks of a similar nature, is that we may draw the really active attention of the profession to the gravity of the case,—as bearing upon the question of competitions, professional and public interest, and the future of our art. Waiving the question whether it is possible for some eight or ten individuals—we will say honourably disposed—chiefly unfamiliar with the language of plans and sections—in the course of a short period (days or months), to adjudicate upon a question of architecture,—or just referring to what seems to be little considered,—viz. that such adjudication demands, not merely good faith, and freedom from bias, time, and technical skill; but a power of judgment and grasp which is irrespective of other mental advantages, and is seldom met with, in questions professional or otherwise; — we say, leaving all these matters to be pondered on,—we would ask meanwhile can nothing be done to make such a mass of results of labour and thought as that now collected at Burlington House, mutually useful amongst architects, and directly subservient to progress? Truly, at length, exhibitions of competition drawings are sometimes opened; but, it would require many months, and we are bound to say more regard for the sake of such an opportunity than the profession are now evincing, to derive any great advantage, comparatively, from such a case as the present. If there is one point more than another that would seem to have had sufficient advocacy of late, it is this,—that association, and the combination of many minds, are essential to both particular and general success. Yet the practice of architecture, where, more than elsewhere, the individual should be all absorbent of external impressions, is to be a pursuit exceptional in its nature. An "Institute," and an "Association" may be excellent,—but by no means all that we require. In a few days (or perhaps after this week), the results of months of labour by a round hundred of architects, will be jammed amongst the lumber of the Ordnance Office; and probably, with some very trifling exceptions, as much lost for any public or professional advantage, as if the competition had never occurred. We could refer to several questions in which light would be derived from the materials now at Burlington House; and books of reference which would be of great service to the profession, could be compiled, with time and opportunity. As it is—passing over mere pecuniary considerations, — what proportionate gain is there from so vast an outlay of time and thought? Clearly, we here have an element in the competition question which deserves more attention than seems to be given to it.*

It appears from a report of the meetings of the committee on the subject of adjudication of the premiums, that the designs were first "classified and arranged by a professional gentleman employed for the purpose." Considering that there are some leading points of principle, on which military authorities alone can decide, we should have been glad to know what principle was adopted in this classification. On it, obviously, the decision must have in great measure depended. Indeed, the first selection of eight designs for infantry barracks was made by the committee (to which Colonel the Hon. A. Gordon and Mr. Donaldson had been added) at their first sitting.†

There is, however, some appearance of classification in the circumstance that many of the designs in the later rooms are less striking, and perhaps less worthy of attention than some which we have had to notice. But, the first that we come to, No. 48, with the motto "Κυδος" is meritorious in the contrivance of structural details, which have received considerable attention. The drawings also are executed with great nicety and elaboration. In the plan the parade is placed across one end of the ground,—the officers' quarters being on one of the longer sides of the parade. Behind these, the companies' quarters form a square group of buildings round the canteen,—the stores being at the back in the same group, and the chapel school in advance in front. Farther back in the ground are the married privates' quarters, and the washhouse,—the hospital is at one side of the ground, and the prison at the other; and at the extreme end is the back gate. The principle of distribution is, it will appear, different to that of most of the other designs noticed, and on some of the grounds which have been stated through our medium, would be held objectionable. The stores are perhaps convenient for the men's quarters; but seem difficult of access.—The companies' quarters form five blocks of building, for 200 men each. The ground story is mainly filled by four parade courts, with piers and openings to the exterior and to the central corridor,—the former openings showing segmental heads. It is proposed to glaze in part, and to adapt canvas blinds to the centre of the opening.—Small spaces are provided for tools, cricket-bats, &c. and the conveniences are placed at the ends. The stairs in the middle are in double flights —ascending and descending,—oak treads and risers leaded, with iron nosings, being proposed. These staircases, and those generally in this design, are open in the upper flights, after the plan adopted by Mr. Roberts in the dwellings of the Society for the Improvement of the Labouring Classes,—the landing serves for the "cleaning" space. The dormitories are arranged on two floors, with twelve men in each room, the sergeants' room being between two dormitories. The men's rooms are heated by an open grate in the centre of the floor. Openings in the partition walls next the corridor are left for ventilation, —a subject which throughout has received much attention. The officers' quarters have an open arcade on the ground story, and a verandah of ironwork to the two upper floors. The cooking-places attached to the dining-kitchens of the men's quarters, each serving for fifty men, seem small, — measuring but 12 feet 6 inches by 6 feet 6 inches. This kind of error is made in many other designs. Such errors have originated in the misconception as to the manner of carrying out the spirit of the report as to day rooms. There are two entrance-gates near together, — the barrack-master's house, to which the guard-house, further on, is attached, being placed between, and forming a marked architectural feature, with columns. The general style of the buildings is plain, but good; and well adapted to works of this kind.

No. 49. — "Fiat," has the buildings designed in the Gothic style, and in good plain character. — No. 50, "Britannia," Messrs. Horace Jones and James, shown by a large model, as well as drawings, has the parade in front; the chapel-school, library, and a covered drill-court in the centre, and the companies in cruciform blocks of building, — five on each side, grouped round the kitchens, or radiating from a centre.—There is one whimsical-looking design in the room we are now in, with a number of circular buildings, apparently attached to a corridor, or covered way, surrounding the parade.

No. 51.—"Spero" has the buildings in detached blocks round the parade; and there may be designs in the last room of the *suite* on the ground-floor, which would be deserving of examination. In many cases, however, the buildings are too much crowded together. But there are useful hints as to certain contrivances,—as in the design marked "Cordon," by Mr. Thorold. One plan which seemed to call for attention, was that of No. 68, with the motto, "Desideratum," which is shown in two drawings, with the elevations upon their corresponding parts of the ground plan. The design is remarkable for the space which it affords for recreation, although the ground seems to be about the same as in the design No. 1, or about thirty-five acres. The principal peculiarity of the plan, however, is in the arrangement of the men's quarters. The parade-ground being placed endwise—with the chapel-school, married privates' quarters, and washhouse along the left and officers' quarters to the right—the end is occupied by the canteen building, with the stores and orderly rooms, which form a centre from which radiate passages communicating with the companies' buildings. These last-mentioned quarters appear to be of one story only; and each building forms a block of triangular shape surrounding an open yard, the intermediate spaces being filled by covered drill-grounds. The hospital and cricket-ground are at the further end of the plan. The houses of the commanding officer and barrack-master are placed on the angles of the ground in front. The officers' quarters form a quadrangle with gardens, in the centre of which is a circular

---

* One amongst many writers says, "One of my assistants has made some additions in the men's quarters in the barrack-designs for the infantry barracks, from which it is to be gathered that the architects have leaned to the provision of a house for every company of a hundred men. Each house to be of two stories; each room to contain a squad or quarter company; that the quarters should be contiguous to the parade; and that the privies should be near to the habitations. I send you these particulars to show that it is perfectly practicable to take the opinions of the whole body of competitors (as expressed in their works) on the governing features of the subject, and whether finally adopted or not, I cannot but think that previous to any executive measure the authorities ought to obtain such a view of the tendency of professional study."—Anonymous."

† Besides the three designs ultimately selected, there were,—No. 4,—"What is worth doing is worth doing well;" No. 5, "Vicino in;" No. 6, "Vi et armis;" No. 8, "Ars armis adjutrix;" and No. 9, "In Omnia Paratus." Estimates appear to have been obtained for the three chosen designs (for infantry and cavalry barracks) only; and it is not very apparent how the committee *could* "give some weight in their final decision, to the element of expense," under the particular course they adopted. The designs for infantry barracks, with 10 per cent. for contingencies, and irrespective of land, were estimated for by Messrs. Hunt and Stephenson at these amounts:—

No. 1 ..... £14,956
" 2 201,201
" 3 213,104

We believe that the excess of cost of No. 2, as compared with No. 1, is attributed to extra convenience which is provided. The items do not include the fittings of kitchens and washhouses, nor gas-fittings; but do include the gas-works shown in designs Nos 2 and 3. Approval was expressed by the committee of the design marked "Victoria," for "the mode in which the arrangements for the accommodation of a company of soldiers are distributed,"—indeed, at one time, this design had been fixed upon for the third place. How far the matter of the parade-ground and relative position of the companies may have been considered in the classification, does not appear.

swimming-bath of the kind so often referred to in our pages.

A few of the designs in the room upstairs deserve attention,—though all except one or two, are painfully prominent on account of the bad taste of their decorative features. In No. 74, "Excelsior," Mr. R. W. Armstrong, there is a covered drill-ground intersecting the parade,—an arrangement which, we fear, would be held objectionable. The officers' quarters are along one side of the parade, and the men's quarters with the chapel-school in the centre, are opposite; the hospital is at one end, and the married privates' quarters are at the other. The canteen is at the back of the men's quarters, with large racket and ball courts adjacent,—and the stores are in the same part of the plan. The barrack-rooms are for twenty-four men each; and two rooms are planned side by side, with windows in the division wall as well as the external side-walls, and the fire-places also in the division. This arrangement would involve loss of space, and does not seem to agree with the best opinions on the subject. The general opinion as to the advantage of dormitories lighted from the ends seems to have prevailed with the committee.—No. 75,—with the motto "Hope" (not to be confounded with another set with the same motto)—has the entrance at one end of the parade, with the hospital opposite, the officers' quarters at the left side, and at the right side the orderly-rooms, chapel-school and stores in the centre, and a group of five companies' quarters on each side of it. These quarters are grouped round five dining-rooms, a chimney-shaft rising from the midst. The other buildings are further to the right.

No. 80, with the motto "Hope," and a geometrical figure, is one to which we have several times referred,—as its general distribution and many of its chief features are grounded on principles on which the experience of its author gives him every claim to be heard. For, far from erring, as some of the competitors have done, by following the letter of the report, the author in the present case, Mr. R. Rawlinson, goes greatly beyond anything that has been contemplated as yet in barrack accommodation. He appears to start with the principle that ample area for exercise and recreation is one of the first provisions to be contemplated in a barrack; and though he admits that one-fourth of the area which he has shown might, by increasing the number of stories and other modifications, be made to answer the purpose where ground was expensive, that which he puts forth as the model plan in the present case—where there was no particular restriction as to site—covers an area which we find amounts to little short of 70 acres. However, he gives to each man a separate sleeping-closet, and to each twelve men a separate day-room, with cupboards, one to each three men. The various quarters occupy the sides of what we may call a quadrangle, divided, however, into parts, or having a general arrangement, which may be represented thus,—

where the horizontal projections in the middle would represent the positions of buildings appropriated to the stores, orderly-rooms, and other purposes,—the officers' quarters taking up the line at the foot; or what is the front of that part of the barrack. The dormitories and day-rooms themselves, in two stories, are entered from a wide corridor, having open arches next the quadrangle; and at regular distances blocks of building occur, containing the lavatories (three basins to each twenty-four men) and the other conveniences, which last he has had the courage to devise on a principle very different to what was recognized by some of the chief witnesses before the committee. To the arguments on this subject we have already referred in more than one of our notices, and need only admit now, that much of the evidence to which we allude appears to have been given without full consideration of the subject. The very provision of what is contended for would go far to alter the habits of soldiers, though these are viewed as incorrigible.

The group of buildings we are noticing encloses, in fact, several quadrangles. Of these, half of the area—as shown in the figure above, and entered through gates—is the ordinary drill-ground, or barrack square; and beyond this is the "esplanade," leading up to the chapel-school, and flanked by two enclosed and covered areas marked in the figure,—one being the regimental covered drill-ground, and the other to be used by the officers. The sergeants are not placed with the men, but have rooms in a separate part of the barrack range, and with their own staircase. The men's kitchens are four in number, two on each side of the building, each kitchen serving for 250 men. The distance to which many of the men would have to carry their dinners, through open corridors, surely involves what is not consistent with the completeness which the plan attempts generally.—But in noticing this central group of buildings we have referred to a comparatively small portion of the plan and arrangements. In advance of the officers' quarters a "grand parade" is shown,—this being reached from the exterior of the barrack by two entrances. Considering the publicity which we have given to "strictures" on some of the plans, we ought to say that the direction of roads as laid down is not that which would be most convenient in the working of the establishment.—The barrack-master's house is near to one of the gates, with the barrack stores adjacent; the guard-room being at the other gate, and the officers' stables at the same end of the grand parade. The entrance to the barrack square before mentioned through the officers' quarters, is by gates, flanked by lofty turrets. At the opposite end, or beyond the "esplanade" and chapel-school, is yet another large quadrangle. On one side of it are the hospital buildings, which themselves comprise the sides of two squares, and have their own garden attached. On the opposite side are the quarters for the married, which, with the washhouses and baths, and the gas-works, also surround a large square. Still farther on, extending across the plan, or more than 1,200 feet in length, is the "recreation-ground." At the extreme end of the plan is placed the canteen, that spot distant from the barrack-rooms being advisedly chosen, on the ground that though the canteen might be properly placed near to the recreation-ground, it should not stand forth as a constant temptation to the soldier. It will be recollected we have noticed plans, and one just recently, where the same feature is made the very centre of the barrack system. The question here involved is just one of many about which no definite conclusion arrived at has been mentioned; but, such matters should be considered by those who are in a position to form opinions, since they govern the icnographic distribution. Until the authorities settle such points in their own minds, the architect may follow the letter of the instructions as to details, but will miss the important principle which is what should be exemplified in a model barrack. At one angle of the recreation-ground is a large plunge-bath; the water from which, it is presumed, might be used to flush the sewers. The temperature of the water would be raised, if required, by a hot-water or steam pipe from the boiler of the wash-house—which, however, is at some distance—the plunge-bath being uncovered. The sewerage and drainage have received careful attention. Land-drains are shown over the whole site; there are surface-drains for the courts, and larger sewers where required, with man-holes and inspection-places at the different junctions. The pipe-sewers are specified to be jointed with asphalte. Flushing-chambers are provided where required, and the head of the sewerage arrangement is supposed to be so placed that the water from the bath could be immediately turned in at that highest point, from which also a pipe is conducted to the chimney-shaft of the wash-house, in order to secure ventilation. Covered ways of communication are of course added in many parts of the ground. In the buildings, fire-proof construction is proposed. Attached to the room of each married private, are a lobby, scullery, and water-closet. The hospital, the author of the design has provided, taking the number of sick upon the estimate of the report but he prominently advances, that if the other parts of his scheme were carried out, no such accommodation in the hospital would be required. The general grouping in the design is effective: the decoration is in great part by bands of red brick. The estimate for the *buildings* is set down at 100,000*l.*—but surely this must be too little,—leaving the enclosing of the ground out of consideration. The latter item must be a serious one in all cases,—the authorities requiring a brick wall 12 feet in height.

Were the principle of distribution which we have so often referred to (viz. where the companies' quarters surround the parade, leaving frequent through-passages) to be taken as established, it will be seen that Mr. Rawlinson's plan would not strictly meet that principle. We have not been able to see whether the principle—which is at least an obvious one—has been considered by the committee,—but it is clear that some general *data* might be laid down for future use, with the assistance which is now at hand. In other points—matters of detail—the design before us could be improved upon. But the main distinctive feature of the plan, the provision of large area for military exercises and recreation, and of particular arrangements and contrivances which in all dwellings are now deemed essential to good morals and health—is one the importance of which should be well weighed by those with whom the decision as to the principle to be acted upon in building will rest. Mr. Rawlinson's conclusions are the result of some knowledge of the fatal defects which have been allowed to exist at home, and of the more advanced position of the subject in some foreign countries. Barracks, in Russia, form the chief of the later buildings and not long ago we referred in these pages to the book of designs by the architect, Rusca, as illustrating the importance of those buildings in the recent history of architecture. We have it certainly in our power to improve upon those structures, both in external character and in sanitary details. Whether Mr. Rawlinson is right in providing a palace and park for him who chooses the profession of arms, we cannot say,—though, indeed, who with such inducements, would *not* be a soldier? The real point is, that so long as there must be a military profession, and so long as the soldier is that expensive article which he has been represented to be, it is wise and economical to attend to his comforts and wants, so that he shall be efficient should the necessity arise, and that he shall not meanwhile be noxious as a citizen. It is difficult to say precisely where economical expenditure passes to extravagance; as it is difficult to say where what is lost in convenience, is not sufficiently compensated for by the increase of area. Nevertheless, principles which are put forth in these plans may be worthy of attention, and may indicate that to which we may perhaps come. Let us add that Mr. Rawlinson's drawings, amounting to thirty-two in number, are executed with remarkable care and completeness.

Amongst the other designs is No. 84, "Ad astra," in which the beds are ranged along a covered space, in galleries, partly supported by cantilevers, and partly hung from the roof. The latter arrangement, without our saying anything about the plan, is most objectionable structurally.—In No. 88, "Vivi tu," by Messrs. Moseley, though the general plan is, we think, questionable, there is merit in the structural arrangements, and in the provision for ventilation. Closets here also are deemed requisite for night use; and the barrack-room fire-places are placed in the centre of the room.

Although we have been entering but slightly into the question of merits; and, though nearly all the works which we have noticed have sufficient in them not to require praise from us, or to be defended by their authors, the publicity which we have given to certain comments upon the successful designs, renders it necessary that we should select those cases for some remarks which appear due to their authors. It is especially due to Mr. Morgan, to make record of one or two points.

First,—As to the arrangement of the kitchen and dining-room—the report is not clear on that

point, but hints at a compromise; and this is what has been accepted. 2ndly,—As to married women in the barrack building—we are told that no difficulty is apprehended on that score, and that all women will be removed,—even at the risk of removing the sergeant also. The restriction as to the married to a company, is framed as though all were of the same rank. 3rdly,—There are advantages in placing the entrance to the barrack at the side,—since there is less waste of the parade-ground. The distance which a cart would have to traverse is not deemed material; whilst the central position of the stores is of great advantage. 4thly,—The arrangement chosen for the "conveniences" is excusable, following the letter of the report.—From Messrs. Lockwood and Mawson we received a long communication, and in our last we corrected some of the statements of our correspondent to which it referred. Far from assuming unlimited area, our correspondents did rather the reverse: they show that one gate may really answer the purpose, and is found even best in establishments occupying considerable area. In one of these cases, 4,000 persons, they state, pass the single gateway six times a day, without confusion. An alteration of the plan, so as to make the companies face the parade-ground, would be attended with disadvantages: the position being now good with reference to the situation of the stores. At the same time, the plan would admit of an extension of the front, though the breaking up the present short lines of communication would not be desirable. They argue that the intention was to leave the decision as to day-rooms with the architects; and we have shown that we favour that view of the instructions.

The author of design No. 3 points out in a letter that four of the companies in his design look to the grand parade, and every company has access to the covered drill-ground, from which there are large archways to the front. The drill-ground itself seems to be considered fairly deserving of some credit at our hands, and this without reference to the general plan, we are happy to give. Amongst our other correspondents, the author of design No. 30, "Comfort," points out that the main entrance is that which is at the side of his plan, and has a guard-house. The entrance leads directly into a road, which runs round the chief buildings, bounded by the barrack-wall. Such a road might be added in other cases with advantage. We repeat that the merits of these and other designs must be judged by *data*, which the military authorities are those who should settle. That the committee omitted to do this in several essential points, whilst they gave very precise instructions where they were hardly needed, is now becoming apparent. Their report fell into the general error of "instructions;" and by advertising for plans which should "embody the recommendations contained in their report," they prevented many of the competitors from making suggestions, and could not take them when made, except by an act of injustice. We are quite accustomed to this feature in the working of the competition system, and which effectually shuts out any advantage anticipated from it; but it is one the importance of which is singularly ill-apprehended, generally.

In an ensuing number we shall speak of the designs for cavalry barracks. A few words now on a point of justice.

When Government advertised for plans for barracks, and offered premiums, they stipulated, it is true, that they should retain the whole of the drawings sent in. Let us look at the bargain:—

PREMIUMS PAID.

		£	s.	d.
Infantry barracks:—	1st.	£150	0	0
,,	2nd.	100	0	0
,,	3rd.	50	0	0
Cavalry barracks:—	1st.	150	0	0
,,	2nd.	100	0	0
,,	3rd.	50	0	0
Total sum paid ...		£600	0	0

There are 114 sets of drawings; and, if we take 50*l.* per set, which will be a low figure, the account will stand as follows:—

	£	s.	d.
114 sets of barrack plans at 50*l.* per set.....	5,700	0	0
Premiums paid for same	600	0	0
	£5,100	0	0

In other words, the architects who have entered into competition give 5,100*l.* to the country, exclusive of professional knowledge. And the sum of 50*l.* does not represent more than one-third the actual money-cost paid to assistants for some single sets of the plans.

Will no member move in the House that, as Government wish to retain the whole of the drawings, and may use the ideas embodied in the same, Government shall pay for them? A committee of three architects, or, say a committee of members acquainted with such matters, might examine and assess the value of each set of plans, and pay the architects accordingly. Let the committee be composed of Tite, Stephenson, and W. Cubitt, and let any person who declines the award take back his plans. Lord Panmure may object and say—"No, gentlemen,—a bargain is a bargain." No doubt this may be retorted—and what then? Is there no answer? Is there no liberal interpretation? It would be a sad world if all acted on Shylock's principles. A great nation can afford to be generous; and it must be remembered that generosity is something added to justice. It may be said to Government,—"If ye are barely just, what are ye more than others?" To use the property of men who are citizens, without payment, is gross injustice; and we can only reiterate to Government,—Either pay for the drawings or return them.

REVOLUTIONARY ARCHITECTURAL PRINCIPLES.*

The notice of columns in my last letter was, in some respects, a digression: I return to architectural morals, as to which here is another statement we must not receive save under protest:—

"The Gothic builder added a love of fact, which is never found in the South. Both Greek and Roman used conventional foliage. . . . . The Gothic sculptor received these types . . . . he saw there was *no veracity* in them . . . . cautiously he put more nature into his work, until at last it was *all true* . . . . it was *extreme love of truth* prevailing over his sense of beauty . . . . *the intense love of veracity which influenced the Gothic design.*"—*Stones of Venice*, vol. ii. chap. vi.

I take this to be but another phase of what we have been looking at. To my own sense and love of art the matter is simply this:—The Greek, running ever into abstract principles, takes certain natural objects, and conventionalizes them: the Goth, ruder and more imaginative, falls in love of the actual leaf, and works it into his building, as though it grew there—*which it did not:* anon comes one with Seven wonderful Lamps, and pronounces the word "veracity:" shall we admit the word as a pure poetic license?

But there is something else. Pre-Raffaellitism has made, it seems, discoveries undreamt of in theology:—

"As the Book of Job was inspired chiefly for the purpose of teaching us the value of natural history" (Edin. Lect. p. 145), so "all the Book of Genesis has a profound symbolical as well as literal meaning. When it is said, 'I have given thee every green herb for meat,' it is not merely the nourishment of the body, but the food of the soul that is intended" (Stones of Venice, vol. ii. chap. 6); and this, it seems, "*the great Gothic spirit revealed by the workman's chisel.*"

Wonderful! Those bits of trefoil and parsley! Not, as we ignorantly thought, for ornament only, but a sort of sacramental food for spirits. How sad that the Greek, so near the truth, should have lost it by the vain deceit of conventionalizing instead of copying them!

It is true that this "intense love of veracity" commits something very like suicide:—

"Where an idea would have been by a Roman or Byzantine symbolically represented, the Gothic mind realizes it to the utmost. For instance, the purgatorial fire is represented in the Romanesque mosaic of Torcello as a red stream longitudinally striped, like a riband, descending out of the throne of Christ, and gradually extending itself to envelope the wicked . . . . but the Gothic workman makes his fire as like real fire as he can," and thus "the *Romanesque builder told more truth;* the other, seizing on a surface truth instead of an inner one; yet all this in the noble Goth is but too hasty a love of the truth."—*Ibid.*

On this part of the business I will not repeat my doubts. As to the question of architectural ornaments in the abstract, or rather as to the principle on which they should be regarded and used by us, I have a very decided conviction. When I look on the various objects of "associative sculpture," I cannot restrain an involuntary shock at the thought of their systematically assuming a realistic character. What! those bunches of leaves, called corbels, for support of groined arches and pendant roofs? Those bishops' heads for dripstone terminations? Those canonized saints, wedged and jammed by dozens round the vaulting of a doorway? Are not all such things pure conventionalities? Does not common sense as well as artistic feeling demand that they shall wear the ostensible semblance, stamp, and livery of conventionalism?

At the best, they are licentious enough. I should have thought it impossible for the fondest lover of Gothic,—though it were myself, who love it, only not exclusively, with all my heart,—to avoid a latent feeling that they *are* licentious. Confession might, I fear, go further,—they are too often "*stuck in,*" without rhyme or reason. Taking them, however, with all their faults, I should have just come to this conclusion,—keep them as enrichments, lying lovingly about a building—suggesting poetic ideas congenial (would it were always thus) with the object and character—but only suggesting them—and they do their work. Carry them further, make them what Mr. Ruskin would have them, and they are monstrous: you have arrived at a point at which Realism outwits itself; for surely *in proportion as figures look like real figures, your building must look unlike a real building.*

I need scarcely observe on the architectural sculpture of the Greeks; all that comes within the principle I contend for,—all, that is, which formed an integral portion of the structure, was conventionalized. The Parthenon sculpture is in a different category: the bas-reliefs were an historic picture that was no structural member of the building. The metopes were alike pictures of events that were articles in the national faith,—pictures let in to fill what, structurally speaking, were hollow spaces, not, like corbels, gargoyles, and dripstone terminations, organic part and parcel of the substantial fabric. Of the frontal figures that filled the pediments I need of course say nothing; they were not, as it is intimated in "Modern Painters" and the "Edinburgh Lectures," *eyes*, any more than the statue of Minerva within. Yet even these, one and all, were idealized.

Our author would reverse all this. He takes that gutter ornament—the lion's head, which so amusingly inaugurates his "Edinburgh Lectures," and pronounces it nondescript, substituting the *vera icon*, the very absolute personification of an actual lion (I beg his pardon, he could not get a lion, so he got a tiger)—as if, when Architecture availed herself of such accessories, she was under law to *realise what could never be real.* Can he be surprised if some one answer, in terms emphatic as his own,—*This is not truth, but barbarism!* Surely if it must come to this, we must have all the abominations of painted sculpture? yes, rather let us cashier sculpture altogether, and get actual heads, pickled and preserved, only not tatooed, after the fashion of New Zealanders.

Short of this, the case seems clear enough. Mr. Ruskin has let loose his indignant adjectives against the arabesque of the Villa Madama: let us try the case on the morality principle. Those grotesques say each, "I am no reality, but an artistic phantasy:" here we have a bit of cornice that says as plain as stone or marble can say anything, "I am a real tiger." Which has the most of—"veracity?"

We are reminded in the "Stones of Venice" (vol. ii. chap. vi.), of a similar case in the Cathedral of Bourges, where the "intense love of veracity" has prompted the *fac simile* colouring of a wreath of foliage round the doorway—a

* See pp. 161, 171, and 203, *ante.*

piece of morality Mr. Ruskin has pronounced excessive, but which I venture to call spurious.

So much for truthfulness. As to the artistic part of the business, there need be, theoretically at least, no difficulty. I am not pleading for that amazingly mournful absurdity in the Edinburgh frontispiece; nor for coarse, crude, slovenly, unintelligent ornamentation of any kind. I state a broad principle: *we are not to convert a religious building into a hortus siccus, a gallery of portraits, or a museum of comparative anatomy.* "The right thing in the right place:" what place can a bull's head have in a marble building, save as symbolised and symbolical? Let art and nature have their proper places: the one gives the *idea* of a thing—the other the thing itself. Do not tumble into a clumsy mingling of the two, and call it "*truth.*" If you use natural objects for ornament, let them be congenial, cognate, and illustrative; but whatever of truth you give them, let it be essentially abstract, not individual truth—ideal, not actual truth. Give them the sentiment, rather than the resemblance, of what they stand for. Throw what you please, or can, of thought, feeling, skill, scientific knowledge into the work; but *let it be seen, from first to last, that these things are architectural symbols,* not a mockery of what they come from. This is art in its highest sense; all below it is the art of savages. Pantheism may plead for it, but not religion,—not philosophy,—not artistic instinct,—not common sense.

I will not follow out my painful protest into all the principles of architectural morals asserted in the works I have been engaged with. But what are we to say of such passages as the following:—

> "The Greek sculptor could neither bear to confess his own feebleness, nor to tell the faults of the forms that he portrayed. But the Christian workman, believing that all is finally to work together for good, freely confesses both."—*Stones of Venice,* vol. ii. chap. vi.

Surely, if the love of ideal beauty is to be identical with pride, and the semi-barbarous *primâ-facie* copying of nature with humility, we must have a new vocabulary of morals as well as art. No wonder, if it be thus, that the "elastic tension" and "rigidity" of Gothic stones, and "*the pleasure in dwelling upon the crabbed, perverse, and morose animation of plants that have known little kindness from earth or heaven,*" should form so distinct a feature in "Christian architecture," nor that it should come from "that strength of will, independence of character, impatience of undue control, and *general tendency to set the individual reason against authority* which, in the northern tribes, has opposed itself throughout all ages to the languid submission in the southern, of thought to tradition."—(*Ibid*).

The only difficulty is the rigidity of fact—the "crabbed, morose, and perverse" consciousness that those Gothic stones were shaped by hands never a cubit's length from the priestly thumb-screw; and that the resurrection of "manly thought," and the dethronement of "tradition," were just synchronical—perhaps something more—with the adoption of that special style we must now attribute to "a feeling compounded of indolence, infidelity, sensuality, and hollow pride."

But a truce: I have no taste for blowing up sheds and sentry-boxes when the fortress, as I take it, is fairly gone. Nor would I touch, for mere wanton "practice," a single fibre of that architecture as to whose alleged moralities I have been compelled to appeal to truth and fact. I love it: I love those who reared it, and those who write and labour to perpetuate it. I have no sort of sympathy for architectural Quakerism: I have an indestructible reverence for artistic fancy, and can say, in soberest truthfulness, with gentle Irmingard:—

> "For every soul is akin to me
> That dwells in the land of mystery."

But when I sit down to a philosophical treatise—a treatise that is to revolutionize the art of centuries, and "establish irrefragable laws of right,"—though I would never pluck the wings of fancy, nor set a seal on eloquent lips, I cannot forget that *truth*—one and indivisible—is, then, the very object we have before us:—it is neither in my temper, my power, nor my duty to take some lamp of Aladdin for a star of the firmament.

If the author I am speaking of would but give his pure Gothic nature, like the architects we both so highly estimate, fair play;—if, discarding theory, rule, consistency, as they did, he would just revel, uncontentiously, in one beautiful image after another, at the simple bidding of artistic impulse,—there is no man living would more heartily rejoice in his own "*florid Gothic*" than myself. It is my misfortune that he must be ever going on to theorize, systematize, revolutionize, anathematize,—and what is worse, all in unmitigated black and white,—

> "Buttress and buttress alternately,
> Seem carved of ebon and ivory,"—

no middle tint, no middle object, no blending, no brotherhood: *this* structure unlike the one the poet sings of, is never seen in tender moonlight,—its black and white are *moral:* "right" everywhere side by side with "wrong,"—felicity with downright crime,—approval and condemnation alternately, each the other's echo. I open my heart to diverse sympathies; and a voice cries, "*Under which king, Bezonian? Speak or die.*"

All this might be, of course, a stern necessity; and, being fairly proved, acquiesced in accordingly. Unhappily the case is reversed. The necessity is on the other side. I *cannot* surrender half my being to a simple order to do so. I *must* at least, know "the reason why." By some inexorable law, whether of self-preservation or a sense of justice, I am thrown back on the stern authority of simple facts. Such facts are, in almost every case, fatal to the system I am called to swear by: but with the aggravation that the spell is in almost every instance the most infallibly broken beneath some such solemn words as "Christian humility," "honest architecture," or "intense love of veracity."

LENY.

A FEW THOUGHTS ON ARCHITECTURE.

ARCHITECTURE is the art of embodying ideas peculiar in themselves, yet, in the nature of their operation, analogous to those thoughts which find their utterance or embodiment in the works of the poet or the musician, the painter or the sculptor. It is an art of more refined abstraction than any of these, seeing that in it, the analogy of mental or moral expression is less obvious. But in proportion as the language of architecture is the more mystic and obscure, so perhaps an acquaintance with the truths which it unfolds imposes upon the mind deeper emotions. By the language of architecture I would not be understood as conveying the idea of a vulgar symbolism, but the expression of abstract ideas by form, colour, and disposition.

If, then, this, the most intellectual of all the arts, be granted to be, in common with other arts, an exponent of the mind; how necessary that, in order to become a true art, reason should assert her sway over the vagaries of fancy, or the ravings of a disordered imagination.

Fitness of expression, an adaptability to the purpose for which a work is designed, is the leading principle to be kept in view, a departure from which strikes at the root of all true art. Combination and treatment are the two other elements or principles essential to the production of an architectural work.

The language of architecture should be disposed in such a manner as that no sentiment is misplaced, and that no feeble and incongruous ideas conspire to provoke a sense of the absurd, where dignity and respect should have found their full expression.

Although it would be futile to attempt to systematize the "language of architecture,"—although "mind" is ever universal and unique, yet it is ever varying and differently complexioned in individuals. I may, perhaps, be allowed to suggest that the following may be legitimate architectural expressions.

The column, whether cylindrical, clustered, or of angular form, expresses that stability and firmness without which the most brilliant qualities of mind are of little use for the great purposes of being,—the arch, that expansion or compass which connects or embraces within its mighty grasp the most remote ideas, bearing a superincumbent weight of masonry, which serves to strengthen and consolidate the whole. The hemispherical and cylindrical forms are expressive of universality and dignity. Pyramidal and conical forms embody the idea of the soul's aspirings grounded on solidity and truth. Curvilinear forms express those meanderings of the mind through which fancy delights to float, drifted by the gentle current of its stream. Apart from the main features of an architectural work, every minor one may be made æsthetic and typical of some element in the universal mind, of a nature befitting the medium through which it is expressed.

Colour, as subservient to form, in itself, and in its combinations, contributes materially to its full expression and development. Without colour, form is the cold intellectual expression, unsoftened by the "genial current of the soul." Colour is to form what grace of diction is to the speaker: it is the impassioned eloquence, the heart-stirring appeal, the persuasive force which attracts mind to mind.

The laws which govern form apply also to the application of colour. Positive colours, as a general rule, appear best adapted to those portions which express strength, whilst neutrals or positive colours, modified in intensity, befit the dependent portions, or the superincumbent surfaces. It may still, however, be questionable if "intensity" be not the law; and if as harmonious a combination may not result from the above order being reversed, those features which are essentially ornamental, as bas-reliefs and the like, should have the same aids to effect from colour, as their relief and chiaroscuro give them, independently of its application. A salient object requires intense or positive treatment, a "surface" subdued or negative treatment.

Finally, if colour be applied, the language, the expression, the work itself remains the same, except that an additional force is received, and the work rendered complete by enlisting into its service this one of the principal elements of the beautiful.

ZETA.

EXAMPLES OF ENGLISH IRONWORK.

SEVENTEENTH AND EIGHTEENTH CENTURY.

WHEN travelling, particularly in the southern counties of England, you find many picturesque and well-designed iron gateways, leading at times to avenues of lofty trees, beyond which you get peeps of substantial houses, built with light red bricks and dressings of white stone: sometimes the handy work of the skilful smith is met with on pleasant terraces, and in front of the quaint old-fashioned hostelries in the villages and by the road side, relieved against the clear sky or green background. Fixed in the sketch-book, they serve, in addition to their usefulness, to preserve the memory of many pleasant scenes and circumstances.

One of the adjoining examples of hand wrought-iron is in front of the Jolly Farmer's Inn at Farnham, the house in which Cobbett, the political writer, was born. He lies buried, by the way, in the graveyard of the old church close by. Those who are able to enjoy a walk of eight or nine miles may take the railway to the ancient town of Farnham, visit the church, the portions of the castle still remaining, and the fine park, plentifully stocked with deer, and after looking over the wide extent of the hop-gardens to the Waverley-hills, inquire the way to Cæsar's camp,—as a piece of high land, about two miles and a half from Farnham is called. Few wilder scenes are to be met with near London than the site of this encampment, round which Aldershott and other heaths extend for several miles. The earthworks in Cæsar's camp are of great magnitude, and many of British formation. There are several barrows close at hand, and on the land below traces of a dyke are visible, leading over the Beacon-hill to the Aldershott camp. There are also some Roman encampments in good preservation, and several barrows of both circular and oblong shape. Passing through the camp, a road leads over heath, amidst forests of fir-trees, to the Farnborough-station, where, if it chances to be evening, the traveller may hear the nightingales

EXAMPLES OF ENGLISH IRONWORK: SEVENTEENTH AND EIGHTEENTH CENTURY.

singing in the wood behind the church while he is waiting for the train.

In addition to the example engraved, there are several other nice bits of old ironwork still left at Farnham; but within the last dozen years much has been removed. This is generally the case in other neighbourhoods; and it is to be feared that, before long, specimens of such work will be very scarce;—the more to be regretted, since what is substituted is always less tasteful and artistic.

In Tottenham and the neighbourhood there are still some good specimens of this kind of work; also on the road from London to Epsom, in the gardens of Vane-House, and other parts of Hampstead, Kensington, and other suburbs of London; but in the old parts of the metropolis, where formerly wrought iron was extensively in use, very little is left. Of the many hundreds of signs, both of the tradesmen's shops and the inns, which, in most instances, were supported by flowing patterns in ironwork, not half a dozen remain: one of these, at the Magpie and Horseshoe, may still be seen in Fetter-lane.

In some of the City churches, the ironwork on the churchwardens' pew, the chains to which

the chandeliers are suspended, and other bits, are worthy of notice. The gateway of the choir of St. Paul's Cathedral is of good design and execution; but, out of doors, the most remarkable examples are the gates of the Temple-gardens and at Gray's-inn: these are, as will be seen by reference to the engraving, of nearly the same date.

PURIFCATION OF SEWER RIVERS.

Some very important experiments have been made at Manchester, at the instance of the active and useful "Manchester and Salford Sanitary Association," and a report of them is now printed in the form of "A Minute of Committee on the Practicability of Purifying the Water flowing from the River Medlock into the Duke of Bridgewater's Canal," of which we shall endeavour briefly to give an account.

The committee state in the outset, that the urgent importance of removing, or at least diminishing the nuisance of the sewer river of Manchester, has for some time engaged their attention. To this end the direction and superintendence of experiments suggested by Mr. Cawley, and involving chemical and analytical questions, were entrusted by a sub-committee to Mr. Crace Calvert, Dr. R. A. Smith, and Mr. McDougall.

The object of the experiments was not to purify the canal, but to obtain data from which to determine whether or not the water it receives from the Medlock could be purified in its course as a stream. Hence the results, however valuable, in a practical point of view, must be regarded as only preliminary to more extensive operations.

Two reports were presented to the committee, one from Dr. R. A. Smith and Mr. McDougall conjointly; the other from Mr. Crace Calvert alone. It was found in course of the experiments by these gentlemen, that when lime is thrown into the river Medlock, it produces "curdling," which results from the formation of a very flocculent precipitate. This precipitate is formed by the combination of the lime with the carbonic acid, organic matter, and other substances held in solution and suspension in the water. It separates into large and distinct portions, which subside very rapidly. Careful observations, repeatedly made, showed that the precipitate falls at the rate of about 1 foot in 8 minutes, or about 1½ inch per minute.

The water of the Medlock, as is well known, is of a dark bluish tinge, somewhat resembling ink at a distance, and ceases to be transparent when more than an inch deep. The clarified water is transparent through several feet, and when standing in a glass, cannot be perceived to be impure.

The value of lime in purifying the water is said to be clearly demonstrated, for it not only removes the dirty black matter in suspension, and consequently clarifies the water, but it also removes the greater portion of organic matter in solution; the quantity of which, separated by the lime, is 59·02 per cent. taking the average of the five experiments.

The minimum amount of lime which, under suitable arrangements, would precipitate the extraneous matters in the Medlock, at per million gallons, is thus given as a mean from different experiments:—"3¾ cwt. of lime will purify 1,000,000 gallons of the Medlock water."

The cost of applying the lime process would be as follows:—

For lime, at 3¾ cwt. per million gallons of water; fifty million gallons of water per week require 9 tons 7½ cwt. of lime.
9 tons 7½ cwt. at 10s. 6d. per ton = 4*l.* 18s. 5¼d. the cost per week.
And therefore 255*l.* 18s. 9d. a-year, the cost of lime.

If the purification should be accomplished by lime only, the cost, exclusive of labour and wear and tear of apparatus, would therefore not exceed 256*l.* a-year.

If, however, some additional disinfecting agent should be required in proportion of 2½ per cent. of the lime, — that is about 12 tons — an additional expense would be incurred, amounting to nearly 100*l.* a-year; but this, under the improved arrangements contemplated, might not be required, or if required, not in so large an amount.

The commercial value of the deposit after the application of lime has also been investigated.

Dr. Smith and Mr. McDougall state, that "the precipitate has a certain value as a manure; although not a great one. It may be advantageously used near the banks of the canal, but at the distance of even a few miles, it could not be used economically by farmers, as it would not bear the cost of transport.

Mr. Calvert remarks—"Although this deposit cannot be considered as a valuable manure, still it might be employed in many cases with advantage; and if we consider the Medlock as a highway of Manchester, its refuse is superior to ordinary street sweepings."

Upon the whole, however, no great commercial value can be attributed to this deposit. The conclusions deduced from the whole series of investigations are:—

1. That the water received into the Bridgewater Canal can be purified by the application of lime.
2. That this can be accomplished at an annual cost of from 300*l.* to 400*l.*
3. That the deposit will have some commercial value as a manure, although not a very great one.

NEW WATER-COLOUR SOCIETY.

The works of the New Water-Colour Society, 349 in number, now in Pall Mall, form a very interesting exhibition, better as a whole, we should say, than has been seen there for some time past. Mr. L. Haghe comes out in great force, exhibiting, in addition to some smaller works, three beautiful pictures, side by side, "An Incident in the Antechamber of the Tribunal of the Inquisition" (50); "Venice, il Molo" (55); and "Town Hall of Oudenarde; Meeting of the Corporations" (64), the best of the three. In the view of Venice, the effect of sunlight is wonderfully shown; but the pyramidal form given to buildings on the island is not agreeable. In Mr. Henry Warren's largest picture, "Rebekah first sees Isaac" (77), the air and light are treated with great skill and good effect: the whole result is very successful. "Ye Lymnere hys Dreame" (211), is full of cleverness, but wants a central and leading incident. In the foreground will be recognised the Princess Royal, engaged on the clever picture contributed by her to the Amateur Exhibition. His 232 is a charming specimen of his skill in treating female figures. "Propertia da Rossi," by W. H Kearney, is amongst the best pictures in the room, and we would mention with commendation (179), "Waiting for the Ferry," J. H. Mole; (202), "Dorah," J. Absolon; (206), "The Avenue at Hurstmonceux," J. W. Whymper; (218), "Old Lime-kiln," D. H. McKewan; (225), "From Don Giovanni," E. H. Wehnert; (313), "Boys Fishing," Robert Carrick; (35), "Landscape and Sheep," C. H. Weigall; (237), "Glen Tilt," W. Bennett; and (263), "Bristol, from Brandon-hill," by Jas. Fahey.

Mr. Edmund Warren has some landscapes of very great beauty, (228), "Goodrich Castle, on the Wye," and (262), "The Wye at New Weir," notwithstanding a violent contrast of colour in the water of the latter which is not quite understandable. A little picture by Miss Farmer (137), "Castle Building," deserves a better place than has been given to it.

PROVINCIAL NEWS.

Wisbech.—The first stone of the new bridge at Wisbech was laid on the 11th inst. by the Mayor. Mr. J. M. Rendel, F.R.S. is the engineer; and Mr. J. T. Leather, the contractor.

Eye.—The plans for the new corn exchange, &c. by Mr. J. Brown, of Norwich, architect, are to be carried out as soon as possible. The roof will be glass, with an ornamental dome and cupola in the centre. The outlay will be from 800*l.* to 1,000*l.* It will be attached to the old Town-hall in front. One gentleman has contributed 400*l.* towards its erection.

Norwich.—The statue of Nelson, by Milne, which about eighteen months since was placed in front of the Guildhall, in the Market-place, has been removed by order of the Committee to the Close, in front of the Grammar School. It is placed on the same pedestal.

Bugley (Wilts).—The committee of the Wilts Reformatory School have selected a site for their intended buildings, at a village named Bugley, within two miles of the Warminster station. The necessary erections have been contracted for at 800*l.* There will be a further sum of 500*l.* required for the plant, furniture, stock, and implements. The subscriptions at present amount to 1,000*l.*

Newport (Wales).—A great extension of the Newport docks is about to be made. The space lying between the lines of railway on the east and west sides of what is termed and known as "the Feeder," and between the present dock and the termination of the Monmouthshire canal, an area of about 8 acres, is to be converted into a dock, which will be nearly double the size of the present dock, and with which it will be connected by an open channel wide enough to pass the largest vessels. It will have a uniform water-depth of 28 feet. The old dock will be improved. Considerable improvements will be made at the river entrance. It is intended to open and close the dock gates, work the coal drops, and do sundry other things now requiring manual labour, by means of hydraulic power. The required supply of water will be obtained from the Ebbw river, by a culvert some two miles in length. The works will be carried out on the plans and under the superintendence of Mr. Abernethy, C.E.

Bednall (Staffordshire.)—The ceremony of laying the first stone of the Acton Trussell and Bednall Parochial Schools, to be erected at Bednall, near Stafford, according to the local *Advertiser*, was performed on Tuesday before last, by Lady Hatherton. The schools will be built on land adjoining Bednall churchyard, and there will also be a house for the master and mistress. The architect is Mr. Ward, of Stafford, and the erection has been undertaken by the workmen of Lord Hatherton; Mr. Cope, of Penkridge, to whom the contract had been given, having left the neighbourhood.

Hartlepool.—The opening of the third or Swainson Dock, at West Hartlepool, is fixed for 2nd June. The works (with the exception of the timber pond, which it is not intended to finish before the opening) are rapidly approaching completion. It is stated that the services of a marine painter have been secured to sketch the opening ceremony, with a view to the production of a picture commemorative of the event.

Kinnaird.—Extensive improvements have been carrying on by the Earl of Southesk for nearly two years past, on his "policy" grounds and mansion at Kinnaird, according to the *Brechin Advertiser*. From plans by Mr. Beattie, of Aberdeen, a curving embankment has been thrown across the marsh hollow, to accumulate the waters of Wimplet "burn," forming a lake of great extent, with deep sweeping indentations or bays among the wooded banks, seen from the castle, in glimpses through the foliage. It will serve for skating or curling bonspiels in winter, and fishing or sailing in summer. Spacious winding new approaches are laid out by Mr. C. H. Inglis, and are now forming. The rebuilding of the mansion is progressing: its architecture has something of the French chateau style about it. From its centre rises the principal tower: from a platform on its top an extensive view of the rich scenery around is obtained, the tower rising to a height of 120 feet. At each angle of the main building rises a tower with high-pitched roofs and turrets, with corbelled windows and balconies, the compartments between filled up with ornamented windows and pediments, and with tympanums, enriched with sculpture of deer, fruit, and flowers, introduced over the several openings. There are numerous panels in various parts of the building, for the reception of the arms and crests of the family, from the thirteenth century up to the present time. The principal entrance is to be from the north front, where a carriage porch is being erected, while the west and south fronts will be inclosed with terrace walls and conservatory, communicating with the house by a private entrance from the principal floor. Mr. Bryce, of Edinburgh, is the architect; and Mr. Morrison, the builder.

CONGREGATIONAL CHAPEL, FOREST-GATE, ESSEX.——Mr. Robert Kerr, Architect

NEW CONGREGATIONAL CHAPEL AT FOREST-GATE, ESSEX.

Our engraving represents an example, just completed, from the designs of Mr. Kerr, of a style of ornamental brickwork of the architect's own introduction, and which, some of our readers may recollect, was illustrated by him by means of several designs and drawings of executed works in the last Architectural Exhibition. The purpose of the style is to produce an ornate effect, stately rather than picturesque, in unmixed brickwork, simple in construction, and economical in cost. Instead of employing brick as an inferior material to fill in between stone dressings, he uses a superior brickwork as the dressings to an inferior brickwork as the filling in,—Suffolk whites in this instance to second yellow Malms; and by the introduction of one pattern of moulded bricks (namely, the cavetto or quarter-round hollow), various string courses, caps, bases, and cornices, are readily produced, and more particularly a main block cornice, which in stone would involve considerable expense. The window and door openings are formed with a simple-moulded architrave brick, having the same cavetto as the chief feature. The only stone required is for steps, sills, copings, key blocks of arches, and the like. All openings are arched, and the walls generally are divided into bays by broad buttresses or piers of slight projection. In the tower and belfry the buttress of greater projection is also introduced. The whole of the facing works into the usual courses of ordinary brickwork. The author acknowledges the fact, that there are occasional "straight joints;" but he contends that as these go no further than the facing, or half a brick deep, there results no sort of practical objection. It need scarcely be observed that in forming the angles of cornices, and otherwise throughout the ornamental work, cement and extra hoop iron require to be used; and, unless the mortar be unusually good, the whole of the larger cornices and arches are built in cement. The style here exhibited is of Italian character; but we are referred to a specimen of what can be accomplished in Gothic architecture upon a corresponding system in the church at Thorpe, near Norwich, built by Messrs. Brown and Kerr some years ago, where brick dressings and Kentish rag-stone are employed in the Norman style with considerable ornament.

The chapel now illustrated accommodates 300 persons on the ground area only, with a small children's gallery for 70 over the entrance-porch in front. The total cost was 1,270*l.* exclusive of warming and gas-fittings. There are a vestry and schoolroom in the rear, and enclosing walls and railing. The tower is not a

part of the original design, but an adjunct now about to be erected to receive a clock. It costs 140*l.*

In the interior a corresponding style of design is carried out. The roof exhibits open timber-work in character, and the pulpit occupies a small platform in an arched recess. The walls and ceiling are finished in decided colours, and the pewing is twice varnished on the deal with a stain. The windows are glazed with diamond rough plate in large squares, so that no blinds are needed, nor shutters for protection.

Mr. Samuel Gurney, who resides in the neighbourhood, presented the site freehold, together with a liberal donation towards the building: he also now presents a striking turret-clock, at the cost of 100*l.* and an additional donation towards the expense of the tower. The funds generally have been raised by private subscription, under the management of Mr. Jabez Legg, of Stratford. The builder is Mr. James Morter, of Stratford.

FOREIGN ART INTELLIGENCE.

Antwerp.—In one of the lofts of the City-house of Antwerp, a gilt iron statuette, 22 centimetres high, has been discovered. It represents Salvius Brabo, who holds in his hand the cut-off hand of the Antwerp giant, with his foot resting on armour. The execution is said to be so superior, that connoisseurs attribute it to the famous Antwerp smith, Quentin Matsys, or one of his school.

Athens.—This ancient metropolis is undergoing great improvements. According to a plan officially settled, new streets are pierced, and houses which have been permitted to stand in the way hitherto, are being demolished, and the streets are to be macadamised. The great canal, north of the city, which extends from the palace to the outskirts of the town, and which is destined to receive the waters of the Lykabetus during heavy rains, has been arched over, by which one of the finest streets of Athens will be obtained. A commission has been sent off to Modon, assisted by the great prison reformer, M. Appert, for correcting there the plan of a building according to the ideas of M. Appert. According to his system, the only punishment inflicted on those guilty of crime is a training to a *continuous* and *increasing* occupation and work.

The Rhine Fall, near Schaffhausen—will be soon arched over, a short distance above the cataract, by a stone bridge, for the passing of the railway trains, and the cellars of the castle of Laufen, which tower above the left bank of the Rhine, have been excavated for a tunnel through which the trains will pass after having crossed the river.

INSTITUTION OF CIVIL ENGINEERS.

ON April 8th, the paper read was "On Steep Gradients of Railways, and the Locomotives employed," by Mr. Charles R. Drysdale.

The object of the paper was to compare the results of some of the performances of locomotives, of various construction, and of stationary steam-engines working ropes, and also the atmospheric system; to examine these results; and, from them, to determine the most economical and best manner of effecting the passage of mountain chains by railway lines.

A history of the construction of the Semmering and Giovi Passes was first given, with the nature of the curves, gradients, &c. The locomotives of the Semmering and Giovi were described. Some English steep inclines were then referred to, and the duties of the Semmering and Giovi engines were compared with the English engines, for evaporating power; for horse-power per cubic foot of water evaporated; and for weight drawn, in proportion to the weight of locomotive.

The following summary of results was given:

Semmering Locomotives.—Total H.P. exerted = 380 H.P.; to lift the train = 285 tons; H.P. per ton of motor = 5·2 tons. Economically (irrespective of speed), 1 lb. wood raised 82,208 lbs. 1 foot high.

Giovi Locomotives.—Total H.P. exerted = 444 H.P.; per ton of motor = 5·9 H.P.; economically (irrespective of speed), 1 lb. coke raised 169,600 lbs. 1 foot high.

Glasgow Stationary Engine—Total H.P. to raise the train = 452 H.P. without the H.P. to lift the rope; economically, 1 lb. of slack raised 45,700 lbs. 1 foot high, irrespective of speed.

St. Germain's Atmospheric System.—1 lb. coal raised 22,063 lbs. 1 foot high, irrespective of speed.

These results, as compared with the alleged duty of the Cornish Boiler, 1,000,000 lbs. 1 foot high, were still far below laboratory duties.

On the 15th the discussion upon Mr. Drysdale's paper was continued.

CHURCH-BUILDING NEWS.

Mollington.—This church, which has recently undergone considerable restoration and repair, was reopened by the Bishop of Oxford on the 1st of April. A new aisle has been built upon the site of the old one: the arches have been opened, and their columns and mouldings scraped: an unsightly gallery, which projected in front of the tower arch, has been removed, and the tower thrown open to the nave: the pews have been swept away, and open benches substituted: a pulpit of carved oak with pierced panels, on a stone base, the gift of Mrs. Hardy; a prayer-desk, the offering of Miss Holbech; and an eagle lectern, all carved by Mr. Bonham, of Wardington, from designs by the architect, Mr. White, of London, have been added. The windows of the aisle and tower have been filled with stained glass, the general design being a border of mosaic, inclosing pale green quarries ornamented by foliage patterns in outline, painted by the Misses Cowper and Miss Harris of Wardington. A noticeable feature in the church, remarks the *Banbury Guardian*, is the ornamentation of the arches by lines of colour in patterns, according to ancient practice. The eastern end of the chancel has been raised, and paved with red and pattern tiles, and a new communion-table of mediæval form set up. The exterior of the church has been generally repaired, and the porch newly roofed with Stonesfield slates in place of the former blue ones. The expense of the restoration has been about 450*l.*

Chevening.—The church of Chevening, which has been undergoing repairs and alterations, was reopened on Wednesday before last for divine service. The principal alteration has been repewing and the removal of a gallery. The amount laid out exceeds 1,000*l.* raised mainly by voluntary contributions, Earl Stanhope and Mr. F. Perkins being the largest contributors.

Croydon.—An appeal for funds to complete the new church of St. Peter, Croydon, is being made by the incumbent. A tower, spire, and peal of bells is what is required to complete Mr. Scott's design.

Cardiff.—The new church of All Saints, Newtown, Cardiff, erected at the sole cost of Lady Bute, was opened on Thursday before last, according to the local *Guardian*. The church is in the Transition style, and built of Newbridge stone, with Bath stone dressings. There is but little of an ornamental character about the exterior. There is a tower erected at the south-west corner, in which is the principal entrance to the nave and gallery. The tower is square and Norman in its style up to the belfry, and is surmounted by an octagonal spire of the Early English period,—the height of both tower and steeple being 105 feet. A spire, it seems, was not contemplated in the original plan of elevation, but the Marchioness of Bute subsequently determined on its erection, as a memorial of the late Mr. Tyndall Bruce, one of the young marquis's trustees. The church consists of a nave, 80 feet long and 34 feet wide, with semicircular apse at the east end, 25 feet wide and 16 feet deep. The windows in the side walls are plain Norman arched, filled with diagonal cross-lined glass instead of lead frames. There are three windows in the apse glazed in the same style, with coloured glass. There is a light gallery, in keeping with the general character of the church, at the west end, 34 feet wide and 15 feet 6 inches deep. The roof is open-framed, of deal, stained in imitation of oak. The gallery, pulpit, and reading-desk, and the pews, are painted and varnished in dark oak. There is a Bath-stone pedestal font, of octagonal form, within the entrance from the tower. The pillars which support the arch of the apse are finished with carved capitals in white stone. The communion-rails are bronzed, and Norman in style. The building was designed by Mr. Roos, architect to the Marquis of Bute; and the work executed in all its details under the superintendence of Mr. Griffiths, builder. The church will accommodate about 800 persons.

Nottingham.—St. Mark's Church, in the outlying district of St. Mary's parish, was consecrated on 8th inst. The church is a plain building, seated to hold about 1,150—more than half of the sittings (low-backed pews, divided by open woodwork, painted oak colour) being free. The building occupies an elevated site in the line of Sanday-lane, facing down William-street, in the centre of the densest and most rapidly-extending population of Nottingham. The area of the edifice is divided into a nave and two side aisles; the chancel being formed in a sort of recess at the eastern extremity of the oblong interior. Two rows of octagonal piers, sustaining groined arches, run down the middle of the church, dividing its nave and aisles. There are two galleries at the sides, supported against the middles of the piers. The large eastern window is divided by a transom, and exhibits five under and five upper elongated lights, with pointed arches. The four windows on either side are similarly divided each into three under and three upper lights. The church has angular turrets or minarets, but no tower.

Coventry. — Trinity Church, Coventry, is undergoing some restoration. A stone pulpit and carved oak seats or modern pews are being added to it. The light has once more been permitted to descend through the central tower; but the polychromatic restorations are said to be deficient in balance and harmony.

Manchester.—Nineteen new church districts are to be formed in the extensive parish of Manchester. At a meeting last week of the committee for promoting the erection of a new church in the populous district of Cheetwood, the architect, Mr. Crowther, submitted a plan and elevation of the new church, which will be plain, but architectural, costing when complete (exclusive of the spire), about 4,300*l.* and accommodating 700 persons. The subscriptions at present promised amount only to 1,800*l.* It was resolved to proceed at once to the erection of that end of the church which abuts upon Waterloo-road, namely, the chancel, chancel aisles (including vestry and organ-room), and two bays of the nave and aisles, which can be furnished at the back with plain brickwork, and extended at any time to complete the plan. The committee, however, are sanguine in expecting, as the work goes on, sufficient funds to enable them to carry it out before the end of next year. A building sub-committee was appointed to superintend the erection. A sum of 700*l.* will be still required for that part of the church which is intended to be first erected.

Darlington.—The design for the chapels for the new burial-ground selected by the Burial Board is, it appears, objected to by the Bishop of Durham, on account of the distance between them being only 16 feet. The same design, as remarked by the *Darlington Times*, has been carried out by the same architect in the dioceses of Lincoln and Ely.

St. Andrews.—The Commissioners of Woods and Forests, according to the *Fife Herald*, have agreed to build a sea wall in front of the cathedral ruins of St. Andrews, at the spot where the sea has been encroaching rapidly for some years past. The town council have agreed, in terms of a request from Mr. Leslie, the Government engineer, to be at the expense of filling up the space behind the wall. The estimates for the work are already given in.

THE READING SURVEYORSHIP.—The Local Board of Health having advertised for a surveyor and inspector of nuisances, had ninety-seven applications, from which forty, and latterly five, were selected by a sub-committee, and the Board ultimately elected Mr. Joseph Gilbert Blair Marshall to the vacant office. Mr. E. Rutledge, of Dover, was the next candidate on the list.

STAINED GLASS.

Holy Trinity Church, Hull.—A proposition is made to fill with stained glass the side windows of the nave of this church, as memorials of inhabitants of Hull, whose bodies lie buried within the church or its graveyard. The scheme proposed is somewhat as follows:—An entire window, or a single light, may form a memorial. In the latter case five memorials may be included in one window. Each light shall contain a figure and a subject beneath it, with an appropriate inscription. At the north side of the church the lights would contain, in consecutive order, figures of Adam, Noah, the patriarchs, kings, and prophets—the subjects beneath illustrating the Fall of Man, the consequences of such fall, and his promised redemption—all types of the New Testament. At the south side would be figures of our Lord, the Evangelists, Apostles, St. John the Baptist, St. Stephen, and all New Testament characters; with groups illustrating all the most prominent incidents in our Lord's life. In the heads of the several windows, on both sides, angels bearing scrolls, with appropriate texts, would fill the several lights. Each window will cost 300*l.* or each light separately, with a proportion of the tracery, 60*l.* One light is offered by Mr. Leng, of Hull, as a commencement. Mr. J. W. Hugall, of Cheltenham, has designed a window in accordance with this scheme, and Mr. Wailes, of Newcastle, has been called upon to provide the glass for the design, which has been exhibited.

St. Martin's, Brighouse.—A stained-glass memorial window has been put up in the church of St. Martin, Brighouse, near Halifax, at the expense of the children of the late Mr. John Brooke. The window is the work of Mr. Francis Barnett, of Edinburgh. The subject of the window comprises effigies of the four Evangelists, and the Apostles Peter and Paul, with scriptural medallions.

Glasgow Cathedral.— Mr. Ballantine, of Edinburgh, says the local *Herald*, has been commissioned by Government to make a design for stained glass for the large east window of this cathedral, to be one of a series of illustrations of Bible history from the Creation till the Ascension—an idea which the magnitude of the cathedral affords ample scope for effectively carrying out.

Roman Catholic Church, Barntown (Ireland).—A stained-glass window has been placed over "the altar of the Immaculate Conception," in this church, at the expense of Mr. and Mrs. Connel, of Bettyville. The Virgin, in one compartment, is represented standing, with the moon beneath her feet, and a circle of stars around her head, her hands crossed over the breast in the act of adoration. Over her head is a scroll with the inscription, "Sancta Maria, sine labe concepta, ora pro nobis,"—and underneath her feet the words "Orate pro bono statu Francisi et Margaritæ Connell." The other compartment is filled by a figure of St. Alphonsus M. Liguori (founder of the Order of the Redeemer, and patron saint of the church), in the act of preaching. The artist was Mr. Casey, of Dublin, and the window was erected by Mr. Michael Hughes, of Wexford.

THE LEPERS' BATH, AT BATH.

WOOD, THE ARCHITECT.

During recent alterations at the Springs in Bath, a structure, built by Wood, called the Lepers' Bath, has been brought to light. Mr. Charles Empson has been drawing the attention of his fellow-citizens to it, and writes us expressions of his admiration for the genius of the architect. Mr. Empson says,—"It is to be regretted that we Bathonians have so scandalously neglected the memory of Wood. In advocating, some years ago, some memorial as a record of our gratitude to him, it was remarked by one of the wisest of our friends that Wood no more required a monument in Bath than Sir Christopher Wren did in St. Paul's. There is, however, some justice done to Sir Christopher in London, even by the celebrated tablet which tells the stranger 'to look around him.' In Bath we have no such inscription to rescue Wood's name from oblivion, by keeping it in our thoughts 'familiar as household words.'

It will not escape the observation of those who visit the Lepers' Bath, that the heart of that man must have been noble who could thus dedicate his finest talents to the decoration of a bath devoted to the exclusive service of lepers. The bath is 19 feet 10 inches square, 4 feet 6 inches deep. It is filled every morning at six o'clock by the natural springs, and at 117 degrees Fahren.; and after being used by those who choose to pay sixpence for the luxury until twelve o'clock, the water is withdrawn and the bath made as clean as a drawing-room.

The afternoon, therefore, is the proper time for strangers to visit this choice specimen of architecture—this perfect gem, as we have heard it termed by many distinguished persons. The walls are grey, of uniform tint. Bold mouldings and cornices support balustrades, separated by sunk panels, and supporting an entablature which demands especial attention. From each corner, supported by rings, through which the folds pass, are folds of drapery, bearing pendants of sculptured foliage, fruit, and flowers, in the boldest relief, and chiselled from the solid stone. It is possible to name the fruit and flowers—melons, grapes, peaches, pomegranates, roses, sun-flowers, lilies, acanthi, and other less familiar plants—not, indeed, botanically correct, but artistically treated—not conventionally, but grand in manner, and perfectly original in adaptation and arrangement.

To the architect Wood we are indebted for the grandeur of our domestic architecture, which, by the energy of a master mind, assumes, in combination, palatial dignity.

Those who are familiar with that beautiful fabric, the Exchange, at Bristol, will recognise in the Lepers' Bath the same rules prevailing—simplicity and grandeur."

METROPOLITAN BUILDING ACT.

The Office and Duties of a District Surveyor. By William Leverton Donaldson. London: Shaw and Sons, Fetter-lane. 1856.

The Metropolitan Building Act, with Notes, Glossary of Architectural Terms, and full Index. By H. W. Woolrych, Serjeant-at-Law. London: Stevens and Norton. 1856.

In the little pamphlet mentioned above, Mr. William Donaldson has set forth, in a plain and perspicacious manner, what is required of a district surveyor by the Act, and how he is to do it. It will be found useful moreover, not only by district surveyors, but by all concerned in building operations within the limits of the Act: indeed, if the surveyors themselves were to circulate it extensively amongst builders, it would be a wise expenditure of money. There is a tendency on the part of jobbing builders and others to proceed without giving notice to the district surveyor, which ought to be checked. A heavy penalty will probably be enforced in a few cases presently, by way of warning.

Mr. William Donaldson, as Solicitor to the Institute of Architects, and acting in that capacity, too, for several of the district surveyors, has been led to direct his attention specially to the Act. We should hesitate, therefore, before questioning his opinion. One observation, however, in his pamphlet, would seem to deserve a little further consideration. He says, with respect to "public buildings" and the Board of Works,—"it would seem, by the first schedule, Miscellaneous, rule 3; and part 1, rule 8, that their sanction must be obtained as to the construction of the walls." The first schedule regulates the thickness of walls of dwelling-houses and warehouses, and rule 3 certainly says,—"Buildings to which the preceding rules are inapplicable require the special sanction of the Metropolitan Board of Works." But this first schedule contains various general rules, besides rules for thickness, and which would be applicable to public buildings; while section 30 distinctly says,—"Every public building shall be constructed in such manner as may be approved by the district surveyor, or, *in the event of disagreement, may* be determined by the Metropolitan Board." We commend the point to the consideration of the lawyers: it ought to be settled at once. By the way, we understand the Board of Works have reversed their original decision as to the late district surveyors of Tottenham and Hornsey, and declared that the surveyors do not hold office under the present Act.

Mr. Woolrych's edition of the Act appears to be a very good one, and has many notes and references. We should advise the author, however, for his next issue, either to get his "Glossary of Architectural Terms" revised by some one who understands the matter, or omit it altogether.

Take two or three examples. "Bond timber—pieces of timber fastened together by tenanting!" "Breast of a chimney—the forepart under the mantel or chimney-piece!" &c. &c. Mere nonsense.

COMPETITIONS.

South Shields and Westoe Cemetery. — The first premium of 30*l.* has been awarded to Mr. R. Lamb, architect, South Shields, for designs of chapels, lodges and gates. The chapels are in the decorated Gothic style, with an open tower and spire, 80 feet high. Each chapel will be similar in appearance and arrangement, and will seat about 100 persons, and will have a reception or lich house to contain eight coffins.

Liverpool Museum and Library.—Before your next publication, the designs for the above will be in the hands of the committee, and a "goodish few," I expect, will be received. A word or two now about the competition will probably be of use. I am not sure that the mode of selecting twelve or twenty, and asking them to compete again, will be found to answer. It seems to me that drawings to a small scale will show a man's *design* just as well as to a large scale: the latter gives the details properly, but the proportion and general idea are the same in either case. I believe it will appear very plainly in the first competition who will be successful in the second; and if so, the other eleven or nineteen architects will have all their trouble for nothing: each will *fancy* he has a good chance, but the committee themselves will *know* to the contrary. I therefore suggest through your columns, that those who by their sketches are *certain of a chance* in the second competition—even if there are only three of them—shall be selected as Class 1; and that those who show that they have *no* further *chance*, and had, therefore, better not trouble further in the matter, should be selected as Class No. 2; any member of Class 2, however, being allowed to compete a second time *if* he felt any desire to do so. Unless some such mode be adopted, fancy the feelings of at least a dozen architects who had tried "hard," in the second competition, when told afterwards that the committee were perfectly aware that they had not had the least chance of success, but that their names had been added to the list merely to make up the number.

A Competitor.

THE LILLE COMPETITION.

In your notice of the "Lille Cathedral Competition," you conclude by drawing a comparison between the interest taken in the exhibition of the designs of Lille and that of the barrack designs in London. Now, sir, there are hundreds of students in architecture and construction who would be but too glad to study the barrack plans, but are prevented from want of opportunity, being engaged all day and every day. The exhibition at Lille was crowded *on Sunday*, and so would a similar one be in London, if the prejudices of a certain class did not induce them to do their utmost to deprive the artisan of all chances of improvement.

J. M.

In our report of the awards in the Lille Cathedral Competition, one or two of the English names were misstated, — not to be wondered at, coming, as they did, through a foreign country. The third silver medal was awarded to George Evans and Richard Popplewell Pullan; motto, "Ad Æthera Tendens." The name of the author of the design, "Dum Spiro Spero," to which honourable mention was awarded, should stand, James Lyndon Pedley, instead of Pealey.

A Block in the Crystal Palace.—A huge framework of wood, said to be for the core of a model of the monument designed by Baron Marochetti, for Scutari, is now being erected in the middle of the nave, close to the central transept, and will serve to cut off the view in a very undesirable manner. What is Mr. Fergusson about to suffer such an obstruction to be put up? We hope it is not too late even now to move it to some less objectionable site. There cannot be two opinions upon the subject.

ST. SAVIOUR'S CHURCH, PADDINGTON.

THE new district church of St. Saviour, erected in Warwick-road West, Maida-hill, on a site appropriated by the trustees of the Paddington estate for this purpose, was consecrated on Saturday, the 12th of April, by the Bishop of Oxford.

The church is a large edifice, containing accommodation for 1,670 persons. It consists of a nave, 106 feet long, 56 feet 6 inches wide, covered by a roof in a single span, and galleries on three sides. A tower, 21 feet square, forms the principal entrance, and a chancel, 20 feet in depth is projected at the eastern end of the church. The staircases to the galleries are also, at this end of the church, in transept-like projections.

The style of architecture is the Decorated English, carried out in Kentish rag and Bath stone. There are two ranges of windows on each side: the lower ones, two-light square-headed, give light to the aisle seats: the upper ones are three-light, pointed: both are filled in with flowing tracery. The roof is a semi-hexagon, boarded and ribbed in panels, and divided into bays by six moulded trusses, springing by arched ribs from massive stone corbels: the spandrils of the trusses are filled in with tracery.

As the body of the church presents few of the usual architectural features of attraction, such as columns, arches, or transepts, the chief interest has been thrown into the chancel, which is richly decorated. The windows are here filled with painted glass; the reredos, consisting of five canopied niches in Caen stone, supported on banded columns of serpentine marble, is filled in with glazed gilt and coloured tiles and paintings: the decalogue tablets are illuminated on gold ground: the boarded ceiling of the chancel is light blue, powdered with gold stars, and the arched ribs are diapered or scrolled with illuminated decorations; the paving is laid with encaustic tiles, and the general effect of colour is increased by scrolls containing texts from Scripture, painted on various parts of the walls.

The reading-desk and pulpit are carved in oak, and supported on Caen stone sculptured bases. At the angles of each are statuettes of the apostles.

The church has been erected by the exertions of Mr. H. W. Schneider, of Sussex-gardens, chiefly at the cost of the incumbent and his friends. A grant of 2,000*l.* was made by the parish, on condition of 500 sittings, being free, and the Bishop of London, with his usual munificence, subscribed 500*l.* The contract for the works was accepted at 11,000*l.* but the upper part of the tower has not yet been built. The east window, of painted glass, is the gift of Mr. Schneider.

The building has been executed from the designs, and under the superintendence, of Mr. Thomas Little, of Northumberland-street, Marylebone. The builders were Messrs. Pollock and McLennan, of Osnaburgh-street. The chancel fittings, pulpit, and font, were well executed by Mr. W. Farmer, of Westminster-bridge-road; and the painted glass and decorations by Messrs. Gibbs, of the New-road. Mr. Bosward was clerk of the works. The church was completed within twelve months from laying the foundations.

ROMAN CATHOLIC UNIVERSITY CHURCH, DUBLIN.

THERE are in that fine city buildings of majestic proportions, admirable for integral completeness, and position, perfect without and within: the Custom-House, the Bank, and the Four Courts, are of the number. They have been the ornament, and not a little the boast of the country, even before the Union; yet nobody knows the names of the architects!

The *Builder* will take care that no such ingratitude to genius shall ever occur again.

An article in the number of this day (19th April), headed as above, describing a church, not as it is, but as it is intended to be, leads the writer to remark, that having heard in Dublin much of University Church, and *its costly interior*, he was induced to go and view it on *the 10th inst.!* He was courteously admitted to the house, which had been a splendid private mansion (Mr. Whaley's), occupying the central position on the south side of St. Stephen's-green, open in front to a square,—*a mile in the circuit*,—and having at the rise large grounds; in addition to which, the next house and grounds have been lately purchased, and added as dormitories, &c.,—the whole giving a frontage of at least 200 feet.

The new chapel, *prospectively* described, is built close up to the rear of both houses, and, like many others in Dublin, exhibits *without* only plain brick walls, which shorten the daylight of the adjacent dwellings *within*; an unfinished aisle, 100 feet long, by only 36 feet wide, and (as I could judge) about 50 feet high; the whole unfinished, save that *small* windows were inserted, on both sides, at a height of over 30 feet, ranging throughout the length!

To narrow the width, there are stalls with heavy arches and spindle shafts, along one side, and a gallery in the same style at one end; the walls being plastered to the height of 15 feet, to receive, as I was informed, incrustations of Irish marbles.

The windows, being of the plainest fabric in iron, are filled in with pellucid quarries, having nodules, or *bulls'*-eyes; and, being dim enough, may shed a religious light within, when the marbles and alabaster, and promised "jewels," are there.

The ceiling is, as my informant told me, finished: it is flat—yes, and very flat. Only fancy a surface, 100 feet by 36 feet, streaked across at intervals of (say) 20 feet, with small beams; or rather (say) with large joists. These are smeared with deep colours,—red, blue, yellow!—no cornice,—no ornamentation; but only the most flagrant colours!

I could not smother my indignation; and observed that I had seen a fair-booth more appropriately and more tastefully ornamented: in comparison with it, Monsieur Jullien's Salle de Ballet was a gorgeous pavilion! The reply was, that "the design originated with the principal." I only added, "I am glad of it, for it would be a disgrace to an architect, and is no credit to the University."

If it is desired to give a description of works in progress, let some artist sketch the superb Gothic arcades of the unfinished Dominican Church in Dominick-street: that would be a picture worthy of the *Builder* and of the architect. But let us have no more of that which *is to be*, but is not: all the wealth and all the pomp of the University, when realized, never can make the University Chapel anything but a cell long drawn out; nor can the pealing organ, when finished and fitted, be better employed than on a "Miserere," for a "jubilate" would be wholly out of place there. AMBULANS.

LANDLORD AND TENANT.

BURT *v.* HASLETT.—RIGHT OF A TENANT TO REMOVE A PLATE-GLASS FRONT.

THIS case had been referred to arbitration, with power to the arbitrator to raise any question for the opinion of the Court. He accordingly stated a special case at the Court of Common Pleas, April 22nd, of which the following are the principal facts:—The plaintiff owned a shop at Woolwich, which was let to the defendant. There was a common glass window in it, but the defendant removed it, and substituted a plate-glass front, which was not fastened to the premises with nails or screws, but was only kept in its place by wedges. When the defendant left the premises, he removed the plate-glass front and put the old one in again. There was a covenant that he should yield up all windows, fittings, improvements, &c. at the end of the tenancy, and under these circumstances, the question for the Court was, whether the defendant had a right to remove the plate-glass front.

Mr. Turner appeared for the plaintiff, and Mr. Joyce for the defendant.

The Chief Justice thought that the plaintiff was entitled to the judgment of the Court, as this was a window belonging to the house, and, therefore, the defendant had no right to remove it.

Judgment for the plaintiff.

THE PROPOSED MEMORIAL OF THE GREAT EXHIBITION OF 1851.

AT the close of the Great Exhibition of 1851, and a few days before the close of the civic reign of Lord Mayor Challis, the public were invited by him to be present at a meeting at the Mansion-house, to consider the most appropriate manner of perpetuating the remembrance of that wonderful gathering from all nations, in Hyde-park, which, originating with Prince Albert, in the first instance, had been so felicitously carried out, and brought at length to so successful a termination, principally through the exertions and influence of his Royal Highness.

The subject was thoroughly ventilated and discussed at that meeting, and although many came prepared to object to a proposal, at one time contemplated, to erect a statue of Prince Albert on the site, in Hyde-park, where the Great Exhibition had stood, nevertheless, when it was finally resolved that, in place of such statue, a first-class group of sculpture, or other appropriate artistic embodiment of the sentiment, to be handed down to posterity, should be adopted as the memorial,—having at the same time some reference or connecting link with the Prince Consort, as the founder of the Great Exhibition, the project was then warmly taken up by the public.

Having been present at that meeting, I remember well that a very considerable sum of money was subscribed in the room; and when, afterwards, as a member of the Society of Arts, I paid my own subscription to the memorial fund into the hands of the treasurer, Mr. Alderman Challis, I ascertained that several thousand pounds had been collected from the public for the purposes of the memorial.

Now, the object of my addressing you is to ascertain if anything has been done with the money subscribed, and if so, what? More than four years have elapsed since the fund was accumulated, and the interest upon it even must have considerably augmented its original amount. In the meanwhile, the green sward has quietly grown over the spot in Hyde-park where the Palace of Industry had stood, without, however, that memorial, in historical record of its brief though important existence, having, up to the present time, been placed there, in accordance with the anticipations, and, indeed, contributions of the subscribers, or any explanations been given to them why the matter has not been carried out. I remember at the time hearing that certain interviews had taken place with Prince Albert, to ascertain his more immediate wishes in the carrying out of the intention of the subscribers, and that his Royal Highness had expressed a desire to found some scholarships or prizes, in art-manufactures, with a portion of the money collected. Nothing, however, has since been reported to the subscribers, and I therefore conclude that nothing has been done; and as I now consider it is quite time, if nothing *is* intended to be done with reference to fulfilling the intention of the subscribers to a memorial of the Great Exhibition of 1851, that the treasurer should return to them the amounts of their subscriptions, deducting the expenses incurred, I have troubled you, therefore, with this communication, hoping its insertion. MEMBER OF THE SOCIETY OF ARTS.

THE CITY.

IN Lombard-street, a capital stone front has been put up under Mr. I'Anson, for the Colonial Life Office. It is six stories in height above the pavement, including the mezzanine story and rooms in the roof, and has five windows in front. It has porphyry pillars and facings on the ground story. The treatment of the down-pipes from the gutters deserves notice. ——Repairs are going on to the upper part of the steeple of Bow Church.——At St. Michael's, Cornhill, various works are being performed, and some colourings inside are talked of. The tower of this church has been thrown open to Cornhill.

THE WAY THROUGH ST. JAMES'S-PARK.

RESPECTED FRIEND,—Manifold are the plans for thoroughfares suggested to be opened into the park called St. James's. Long since I gave thee my notions of the useful in this respect. Now we have projects for sundry inroads,—one at the palace of our Queen, nearly opposite the street called after the same saint; one at Spring-gardens; and one other at the end of Regent-street.

Now, it beseemeth me that, as an entrance, that beside Marlborough-House (almost continuous from the street of James) would be most direct, the aperture being already made; and that, as an exit, that other, in a right line with the Mall, tending towards Trafalgar-square and the Strand, would be easiest of access, and also more beneficial to commercial people and others; whereas the proposed descent by the lofty column, whilst it did violence to existing architectural arrangements, which are (as to this metropolis) passing well, would offer far greater advantages to counterpoise the wholesale demolition involved in the plan.

From Marlborough-House to Pimlico, the spacious *central* Mall road, now open there, offers the coveted desideratum of the most direct route, from Pall-mall to the Strand on one hand, and to Belgravia upon the other.

It may be alleged by fanciful projectors of great bridges over artificial waters, and of wide extended pavements across the pleasing greensward,—my ways are not thy ways. Neither are they: I wish for that which is useful to the generation, for that which is shortest, and for that which can be effected with the least cost.

Who could think of taking down a great monument, for the purpose of setting up the idol in another locality? or of disturbing the legalized quietude of lessees dwelling in those lofty terraces, when better approaches, in every sense, may be had without molestation to any inhabitant!

The palace of our gracious Queen would still stand off at the distance of 200 feet from the road, having ingress by the lodge gate opposite the office ascribed to the Duchy of Cornwall. The loyalty of her people could never be obnoxious to that lady at so respectful a distance.

Should it be intended to accommodate the British public by removing the painful restrictions to free intercourse now existing, then the right course would be to cut the causeway in a direct line with the central Mall walk; and this would pass directly

across Spring-gardens, and issue into Charing-cross, directly opposite the statue. The opening there would include the present short street (next Drummonds'), and with the sites of the bootmaker's, the insurance-office, and the tobacconist's, give a causeway of 90 feet across. On the opposite side, the Record Office and Mr. Wilkins's would have to be removed, together with part of Lady Guest's garden. Thus a grand esplanade would disclose a view of Buckingham Palace from Charing-cross!

Those *noble residents* who are objectors to any public road, ought to recollect that all who have the *Royal privilege* are now entitled to ride or drive along the Mall, and that it is not for them to restrict the prerogatives of the Crown. The universal public have already the right of footway: it is for Royalty, in humanity or mercy, or even for expediency, to extend these rights.

Already is there much of the verdure of the park sacrificed to gravel-walks and esplanade: not one other turf ought now to be displaced: with what remaineth, and the way now sought, the dwellers in London would consider themselves in clover, together with

EDITH GOING.

THE CUSTOM-HOUSE OF LONDON.

As I was personally engaged in superintending the works at the Custom-house under the late Mr. Laing, and was examined as a witness on the trial, I think it but just to correct the statement of your correspondent, "A. B." in the *Builder* of the 12th instant. The piling was an extra work, and paid for according to quantity. It was done under the direction of a foreman (Stephen Mullins), appointed by the architect, who measured each pile before it was driven, and if not used entirely, the residue was also measured, and only the difference was charged or allowed. Thus it was the builder's interest to drive them as far as possible, but he had no discretion in the matter. Upon clearing the ground after the failure, it was found that many of the piles were stuck into the old camp shotting that was buried, or were stopped by masses of stone wall, or other obstructions, showing plainly the unsuitableness of this mode of forming a foundation on that site, but it was done by the advice of an engineer, and not of the architect.

The *immediate* cause of the failure was the piling to one of the piers being one-half out of place (not under the pier), and consequently having only half bearing; also, the ground having been excavated to admit the piles and recently filled in: the slipping away of the pier was thus facilitated, and it sunk at once into the hole so prepared for it.

The blunder was the joint act of the clerk of the works and foreman, in setting out the pier; but the responsibility undoubtedly devolved upon their respective principals.

The penal consequences were necessarily heavy; but the *moral stigma* which was thrown upon the unfortunate parties I have ever considered to be most cruel and unjust.

CHAS. FOWLER, Architect.

THE METROPOLITAN BOARD OF WORKS.

At a meeting of the board last week, besides some other and minor business, the following was gone into:—

Reports by the Superintending Architect.

1. On the application of Mr. Hemming for the approval of a temporary iron church for Newington. Agreed to.

2. That Mr. Covell's application for sanction to make a projection beyond the regular line of fronts of buildings, at Sydenham, be not complied with.—Agreed to.

3. The matter of disagreement between Mr. Horace Jones and Mr. George Porter, D.S. in the case of the Music Hall, Royal Surrey-gardens, was ordered to be laid before a full board by the superintending architect on a convenient day.

4. The application of Mr. Felgate for consent of the Board to build beyond the regular line of fronts of buildings in Crombies-row, Commercial-road East, was granted.

Proposed Thoroughfares.

Mr. Burslem called attention to a communication from Mr. Alfred Beaumont, containing suggestions "for thoroughfares through the metropolis and St. James's and Hyde Parks."

It appeared from the statements of the applicant, that that part of the proposal submitted to the Board suggesting sundry alterations in St. James's-park and its approaches, was submitted to his Royal Highness Prince Albert some few years since, when the author had the honour of forwarding a copy of his explanatory views, having been informed that the plans had been approved of by his Royal Highness. The applicant in his memorial stated, "that the attention of the Government and the Commissioners of the Board of Works being now occupied in reconsidering this subject, he was anxious to bring forward his original suggestions, with two others for similar improvements in Hyde-park, and along the north bank of the Thames."

Main Drainage South of the Thames.

Mr. Carpmael moved that the report of the engineer on the sewage interception and main drainage of the districts south of the Thames be taken into consideration by a committee of the whole Board, on Wednesday, the 30th day of April. Mr. Savage seconded the motion. An amendment was then moved by Mr. Leslie, and seconded by Mr. A. Wright, to the effect that the discussion upon the motion in committee be open to the public. Upwards of an hour was consumed in the conversation upon this subject, and eventually the motion for "closed doors" was carried.

A motion by Mr. Few as to calling for essays on the application of London sewage to agricultural purposes, was postponed; and a memorial by Mr. W. Morris, as to the manufacture of sewage into agricultural manure, withdrawn.

Miscellanea.

NORWICH ARCHÆOLOGICAL SOCIETY.—The general meeting of the members of this society was held on Thursday in last week, at the Guildhall, Norwich. The financial statement showed a balance in hand of 17*l.* 3s. 6d. against 52*l.* 15s. 1d. last year. Mr. Daveney, in alluding to the figure of "Snap," which occupied the upper part of a closet in the Guildhall, mentioned that a similar custom to that prevalent in this city, of perambulating the town with "Snap," existed in some parts of the Continent, where a figure precisely similar to the time-honoured "Snap," and called by the same name, was used. The Rev. J. Gunn said he had just visited Martham Church, which he was happy to say was undergoing a complete restoration. The company shortly afterwards adjourned to St. Andrew's Hall, where a paper on that building and its adjacent antiquities was read by Mr. Harrod.

CHELMSFORD ARCHÆOLOGICAL SOCIETY.—At a meeting held at Coggeshall, on the 10th instant, the Rev. E. L. Cutts read a paper on the Early History of Coggeshall; the mention made of it in Domesday Book; the foundation of the Abbey of Coggeshall, in 1139, by Queen Matilda (wife of King Stephen); and subsequent grants by other monarchs. He expressed his belief that the monks of Coggeshall were among the first who made bricks in Great Britain—about the end of the twelfth or beginning of the thirteenth century; and exhibited some specimens of moulded bricks found in an ancient brick-kiln recently discovered near Coggeshall. Mr. Cutts next called attention to a number of documents relating to the trade of the town, including the minute-book of the old company of fullers, baymakers, and weavers; and read a programme of a pageant exhibited by the weavers of Coggeshall in 1791, which was no doubt a restoration of a much more ancient festival. The party then proceeded on a tour of inspection to the points of interest in the neighbourhood.

EASTBOURNE.—Works are going on to prepare for the coming season in this flourishing and improving bathing-place. A paved connection has been made between the Marine-parade and the Grand-parade, which was much needed, and some of the unfinished houses are being proceeded with. The cost of the gas, 6s. 8d. per 1,000 feet, is much complained of here, and no wonder. The company should be wise in time, and by a proper reduction, calculated to increase the consumption, prevent the likelihood of competition. The charges for water, also, are very excessive.

THE PROPOSED ROADS THROUGH ST. JAMES'S-PARK.—Sir Benjamin Hall has announced, in the House of Commons, that he proposes (avoiding the removal of the Duke of York's column as very objectionable) to make, first, a road commencing in Pall-mall, passing through the German Chapel, and proceeding along the paved road into the Mall, thence passing in front of the palace and running out by Buckingham-gate; and, secondly, a road for the convenience of pedestrians, to run over the ornamental water by means of a bridge. He is prepared, the estimates being granted this week, to press forward the works with the greatest possible despatch.

ROAD-MAKING FOR THE DOCTORS.—May I call your attention to the material used for forming the new roads in and about Camden-town, which is a layer of oyster-shells. After rain the moisture swells the animal matter, and then the sun coming hot upon it excites a fermentation, emitting offensive smells, and producing illnesses, such as low fevers, &c. Please to say something about the practice, for a road is now forming from King's-road through the Agar Estate, apparently in the same manner.

AN INHABITANT.

ACCIDENTS.—A poor fellow was literally sawn to pieces and killed on Friday week, at Ardwick, Manchester. He was in the employ of Messrs. Bennett, timber merchants, Hyde road, and had the charge of the circular saw, which can be oiled and greased only when it is in motion, and it was while so engaged that poor "Israel Riley" slipped and fell upon the saw. It took off one of his legs, cut open his side, and threw him forward in this horribly mutilated condition. He lived only a few minutes.——At Keswick, on 15th inst. a ladder, left standing against the front of a shop in the market-place, and not properly secured, was blown down by the wind, and fell upon a little girl who was passing at the time, inflicting upon her very serious injuries, including a dangerous fracture of the skull.——On Thursday morning before last a fatal accident, according to the *Cambrian*, of Swansea, occurred at the Tondu works. Three workmen were lying down at the forge, when a sheet of iron, weighing about 3 cwt. put up for the purpose of protection against the wind and rain, fell down upon them. One was killed, and the arm of another injured.——On the 7th inst. says the *Chelmsford Chronicle*, whilst a man was at work on the Loughton and Woodford Railway, now in course of construction, a slip of earth of about nine tons fell and buried him beneath it. He sustained several severe injuries, including a fractured thigh and injury to the back.

MONUMENT AT ST. PAUL'S, TO THE DUKE OF WELLINGTON.—In reply to Viscount Chelsea, in the Commons, on the 18th inst. Sir B. Hall said that if the disposal of the 25,000*l.* balance of 80,000*l.* voted for the Duke's funeral were placed, by the Chancellor of the Exchequer, under his control, he would not rest satisfied with the two designs for a monument sent in by Mr. Baily and Mr. Foley at the time when these gentlemen and Mr. Gibson and Baron Marochetti were asked to compete, but would call in the aid of a greater number of artists of the highest eminence in this country, in order to see whether the genius of the country could produce some monument worthy of the memory of so great a man.

GAS.—The Doncaster Gasworks committee have received tenders for fire-retorts and iron castings. A considerable difference in price existed. Mr. Ingham (of Wortley's) offer to supply fire-retorts and to deliver them at the Doncaster Station, was accepted. For iron castings there were eight tenders, varying, from highest to lowest, as much as 120*l.* Messrs. I. and J. Cliffe, of Bradford, received the contract. The committee also agreed, in order to carry on improvements, to borrow 1,000*l.*——The gas-consumers of Willenhall having failed to obtain a reduction of the price of gas charged by the local company, have resolved to form a gas-consumers' company, with 5*l.* shares, and have already subscribed 2,000*l.* for that purpose. They feel assured that if gas can be procured in other towns at from 3s. to 4s. per 1,000 feet, Willenhall, with all its facilities for obtaining at the lowest price the necessaries for its production, can be supplied on the same terms, by which the consumption will be nearly doubled, and thus render it a useful as well as profitable investment."——A rival to the Boghead cannel, according to the *Journal of Gas Lighting*, has just been discovered in the United States. The newly-discovered deposit is situate near the banks of the Ohio, in Breckenridge County, State of Kentucky. A sample sent to this country produced, it is said, at the rate of about 11,000 feet of gas per ton, of a quality 15 per cent. superior to Boghead cannel gas, one cubic foot per hour giving a light equal to ten standard sperm candles.

THE PROPOSED CRYSTAL PALACE FOR MANCHESTER.—The magnificent scheme of a Crystal Palace, as large as the one at Sydenham, as a permanent repository for works of art, is still contemplated. A number of gentlemen who formed themselves into a committee, have, says the local *Courier*, secured a guarantee fund of 40,000*l.* which must be regarded as a promising beginning, seeing that no appeal has been yet made to the public. The scheme is expected to be not only self-supporting but profitable, pecuniarily, as well as intellectually.

"DOINGS AT BEDLAM."—Will you permit me to explain, in reference to your comment on the humorous letter of "Syddie de Chimlie," that the "scheme" of which the tall shaft forms part, has for its principal object the removal of the nuisance of *down* smoke to which the fireplaces of all the rooms in the principal part of the building are subjected from the proximity of the dome. A tall shaft, however elegant in itself, may be considered objectionable in the immediate vicinity of the dome; but even a "big chimney" will probably be thought less unsightly than some fifty chimney-pots, each 40 feet high, with all manner of cowls, elbows, and grotesque terminations, such as disfigure most of our public buildings.—THE WARMING AND VENTILATING ENGINEER.

*** Nevertheless, the shaft might be in the right place, and of accordant character.

East-Indian Railways.—On the 9th inst. a large party of professional friends invited Mr. James Berkley, the Chief Resident Engineer of the Great Indian Peninsula Railway Company, to an entertainment at the Albion, to do honour to his past services in India, and to bid him farewell, before returning to his arduous post. Mr. Robert Stephenson, who was in the chair, in paying tribute to Mr. Berkley, said,—"A favourite expression of my father's, in his early career, was—'I can engineer matter very well, but my great difficulty is in engineering men.' Mr. Berkley has, I am happy to say, succeeded not only in engineering matter in a foreign country, with few available resources for railway operations, but he has also been eminently successful in that more difficult task of engineering men. No small tribute to his talents and his temper." Mr. Berkley, in the course of his reply, stated that they had laid out 1,450 miles of main line in India, the whole of which extent had been sanctioned by the British Government, and that 800 miles, including the Ghaut inclines, had been conceded to the Peninsular Railway Company for immediate construction. They had finished say 90 miles of railway, and 220 miles more were actively progressing.

Strikes.—About twenty of the masons employed by Messrs. Dickson and Co. of Swansea, in walling at their works in the Float, struck on Friday last, and refused to resume unless they received an advance of 6d. per day. The average rate of wages now given at these works is 4s. 3d. a day—the general rate of wages in the town about 3s. 6d. a day. The contractors have refused the demand of the men, and the works being thus stopped, they have been compelled to discharge all the quarrymen and excavators, amounting to upwards of 300. The Harbour Trustees have consented to the delay of the works, till a satisfactory termination has been come to between the employers and the employed. Messrs. Dickson and Co. have advertised for a new staff of workmen.——The navvies employed on the Dalmelliugton Railway, in the west of Scotland, lately struck work for the abolition of the truck system carried on by the contractor, and for an alteration in their pay-days. Intimation was given them that such terms would not be agreed to. On Monday before last a number of them returned to their work, and the rest followed their example on Tuesday.——The Thurso quarrymen, considering their present wages too low, have abandoned work, till steps be taken for their better remuneration. Upwards of 100 men from all the quarries in the Hill of Forss, says the *John O'Groat Journal*, "have been parading our streets with a piper at their head. The employers have not as yet agreed to the wages asked, which cannot be termed other than reasonable, being only 1s. additional per week, making in full 12s.—little enough for such a hard-working class of men." Little enough, truly! It is to be hoped the masters will end the dispute by conceding their workmen's request.

British Archæological Association.—April 9.—Annual General Meeting.—S. R. Solly, V.P. in the chair.—The auditors' report and balance-sheet were delivered in by Mr. Turner, from which it appeared that 23*l*. 13s. 2½d. had been during the past year expended beyond the receipts; but that 109 members were in arrear. Forty-nine associates had withdrawn, and forty-eight new ones had been elected. The society had lost four members by death,—R. J. Smith, esq.; Rev. J. J. Ellis, M.A.; Stephen Jackson, esq. M.A.; and W. D. Saull,—of whom the treasurer read obituary notices. General votes of thanks were passed to the president, officers, and council of the past year, and a ballot taken for the ensuing one, when the following were returned.—President—The Earl of Perth and Melfort. Vice-Presidents—Sir F. Dwarris; G. Godwin; J. Heywood, M.P.; J. Lee; LL.D.; J. A. Moore; T. J. Pettigrew; S. R. Solly, M.A.; and Sir J. G. Wilkinson, D.C.L. Treasurer—T. J. Pettigrew. Secretaries—J. R. Planché, *Rouge Croix*; and H. S. Cuming. Secretary for Foreign Correspondence—W. Beattie, M.D. Palæographer—W. H. Black. Curator and Librarian—G. N. Wright. Draughtsman—H. C. Pidgeon. Council—G. Ade; W. F. Ainsworth; A. Ashpitel; T. Brewer; G. A. Cape; Rev. J. E. Cox; F. H. Davis; N. Gould; R. Horman-Fisher; G. V. Irving; W. C. Marshall, R.A.; W. Meyrick; D. Roberts, R.A.; Capt. A. C. Tupper; J. Turner; W. Wansey; and J. Woods. Auditors—C. A. Elliott and A. Thompson.

Painters' Estimates.—Please insert the following tenders given in for the repairing and painting Christ Church, Watney-street, Commercial-road East, and the vicarage:—

Cutler	£660	0	0
Henner	475	0	0
Wood	463	0	0
Taylor	338	0	0
Thornhill (accepted)	309	0	0
Thorpe	209	0	0

S.

Public Free Library for Marylebone.—The experiment of a free library has been tried in this parish for above two years, and has, with very limited means, produced most beneficial and satisfactory results. This Institution, formed previously to the passing of the "Public Libraries Act," cannot now be expected to continue. Its present voluntary support is altogether inefficient and inadequate; and it is the conviction of its present supporters that, since free libraries are authorized by the Legislature, a public library should be established and maintained by a public rate. Endeavours are being made to effect this, and will, it is to be hoped, succeed.

Majolica.—In your issue of the 12th, you quote from Timbs's "Things not generally known," some account of the Mojolica, or as it is frequently called, Raffaelle ware. Perhaps a few notes thereupon may be acceptable. The person who first brought this art to a certain degree of perfection, seems to have been one Orazio Foutana, of Castel Durante. The designs had previously been rude, but Duke Guid' Ubaldo, taking an interest in the manufacture, insisted on better designs being copied, and from his own store gave some of those by Raffaelle, which previously were not generally known. It is, however, very questionable whether it was Raffaelle Sanzio, from whom the term Raffaelle ware was taken, for he appears never to have been connected with the manufacture. The name was more probably derived from Raffaelle Ciarla. He is known to have been one of the most celebrated painters of this ware, and was moreover selected by the duke already mentioned to convey specimens to Spain for presentation to the court.—W.

The Ruined Church of Cow Honeybourne, Evesham.—The sale of parish property at Cow Honeybourne, took place at Evesham, on Monday last, when the lot of six cottages, occupying the site of the church, and including the tower, were purchased for 170*l*. by Mr. C. G. H. St. Pattrick, of Worcester, treasurer to the Diocesan Architectural Society. It is hoped that an appeal may be successfully made to churchmen to provide funds to meet a liability which ought not to rest upon a few individuals.

Fall of a Surveyor into an Old Coal-pit.—An extraordinary, but happily, not a fatal accident lately occurred at Bilston, to Mr. Simcox, of Birmingham, who, while walking about near the railway station, suddenly fell into an old coal-pit, some thirty or forty fathoms deep. He fortunately caught hold of a chain which happened to hang down into the pit, but could not reascend, and on the contrary slipped farther and farther towards the bottom, in the horrible uncertainty as to whether the chain went even half so far. It did, however, most fortunately, reach the bottom, but there Mr. Simcox fell so stunned and injured as to become insensible. On recovering, he could think of no way of saving himself from a lingering and dreadful death, but to shake the chain to and fro, in the almost hopeless chance of some one passing the deserted pit. Thus occupied, with intervals of exhaustion, no less than three days and nights passed, when happily a boatman on the canal at a little distance, observed the swinging of the chain, and knowing the pit to be an unused one, rightly concluded that some one had fallen into it. The joy of poor Mr. Simcox may be conceived on finding that his forlorn hope had proved effectual. He was carefully drawn up in a state of great exhaustion, and conveyed home. The neglect shown in leaving such pits open is infamous, and most criminal. By a singular coincidence, a man who fell into another pit about the same time, also caught hold of the chain or rope, and saved his life at the cost of similar injury to his hands and knees.

The Chester Water Works.—These works are in an advanced state of progress, enough being done to give 600,000 gallons of water daily, and in a short time, when the whole is finished, upwards of a million gallons of filtered water can be daily supplied to the town. At present three filter-beds are in use, but a fourth is in course of construction; and two engines of 25-horse power each are employed (one at the river), to drive the water into the receiving tank, capable of holding 450,000 gallons, from which it flows into the filter-beds, where, on a bed of sand and stones, 5 feet thick, it undergoes purification. Another 25-horse power engine is then employed to force the water up into a tank built in a tower 144 feet above the level of the river, and holding 222,000 gallons, from which it descends into another tank, from which it flows into the town without further mechanical force, as the tower through which it has previously to ascend is 50 feet above the average height of the buildings to be supplied. From the 15th of March, according to the local *Chronicle*, water has been supplied to the town north and south of the Cross, and in a few weeks more mains and branch pipes will be laid so that a continuous and plentiful supply of pure, wholesome water may be obtained in every house.

Drainage of London.—The plans for the general drainage of the metropolis are approaching maturity; and as permanent establishments for pumping are contemplated for both sides of the Thames, probably from different levels, I beg to offer a suggestion of some novelty, but which, I think, would be productive of a large economy. It is the purchase of one line of arches in the Thames Tunnel, by means of which the whole of the sewage might be brought to one side of the river, and one establishment only be necessary for raising it. The arches are 16 feet in height, and there is consequently capacity enough; and as to the consent of the shareholders of the tunnel, I can answer for several equally interested in that abortive undertaking, with, sir, your obedient servant,

One who wants to make a good thing out of a bad one.

TENDERS

For building a house, offices, and stables, at Weybridge, for Mr. C. Buxton. Mr. Barnes, of Ipswich, architect:—

Patrick and Son	£5,482	0	0
Piper and Son	5,100	0	0
R. Watts and Sons	5,082	0	0

For a house in Little Carter-lane, City, for Mr. Lunniss. Mr. Hudson, architect:—

TO CORRESPONDENTS.

Note.—Various statements having reached us as to the difficulty of procuring copies of the *Builder* in some parts of the kingdom—more particularly in Ireland,—it is proposed to parties desiring to subscribe, that on the transmission of a post-office order, or postage stamps, addressed "Office of the *Builder*, No. 1, York-street, Covent-garden, London," the *Builder* will be forwarded to them on the day of publication.

Terms, for One Year	£1	1	8
" " Half-year	0	10	10
" " Quarter-year	0	5	5

"*Iron and Water.*"—An "Old Subscriber" says,—"I have concern with many iron pumps, and also pipes, for the conveyance of water. In the majority of instances they answer well, but in some cases, doubtless from some property peculiar to the water there, they in render the water unhealthy, injurious to clothes, and almost useless. I should be very grateful for any hint which may be useful on the subject."

"J. R."—"T. L."—"Constant Reader of the *Builder*."—"Mr. M."—"J. M. M."—"A. T." (it is not proposed to insert the report in question).—"J. L. P."—"S. T."—"J. T."—"M. P." (it is not necessary).—"H and R."—"F. B. U." (the marble work is not yet done).—"Veritas."—"H. G."—"J. B. N."—"C. C. C."

"*Books and Addresses.*"—We are forced to decline pointing out books or finding addresses.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

NOTICE.

From and after the 1st January, 1856, the *entire postage* upon all newspapers sent to France, and Foreign countries *viâ* France, must be prepaid: the stamped copy of the paper is of no avail.

ADVERTISEMENTS.

A DRAUGHTSMAN WANTED, in the country, who can prepare under direction a general and detail drawings for buildings, take out quantities and survey and level, he must also be able to make drawings for castings and wrought-iron work. Salary, 2*l*. per week.—Address, H. C. Office of "The Builder."

BOROUGH of WARRINGTON NEW CEMETERY.—WANTED, by the Corporation of Warrington, a competent PERSON, to take the appointment of CLERK of the WORKS. The person appointed must be capable of setting out and superintending the whole of the works, consisting of drainage, road-making, erection of chapels, lodges, &c. to take levels, and otherwise carry out the instructions of the Cemetery Committee. The salary will be Two Guineas per week. Applications, stating last employment, and accompanied with testimonials, must be sent in, addressed to the Chairman of the Cemetery Committee, on or before the 3rd day of MAY next.

By order, JOHN FITCHETT MARSH, Town Clerk.

Warrington, April 21, 1856.

TOWN TRAVELLER.—A Company, manufacturing Chimney-pieces and Decorative Work for churches and first-class buildings of a very superior class are open to make an ENGAGEMENT with a TOWN TRAVELLER having connexion among architects and first-class builders. A liberal commission will be given.—Address, by letter only, post-paid, T.T. 4, Trafalgar-square.

TO PATTERN MAKERS.—WANTED, a good WORKMAN. A steady, industrious Man, who thoroughly understands his business, may depend upon a permanent situation.—Apply to Messrs. GRAFTON and HOOD, Eagle Foundry, Oxford.

TO DECORATIVE PAINTERS.—A CONSTANT EMPLOYMENT will be given to a DECORATIVE ARTIST, who is a good Designer and Draughtsman, and thoroughly competent to execute decorative works. Specimens to be forwarded forthwith, and application made to Mr. H. J. BEDHAN, House Decorator, Southampton, stating rate of salary required, age, if married; together with particulars of qualification. Satisfactory references will be required as to character.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement.

BATH, PORTLAND, and ROMAN CEMENTS GROUND and LUMP HYDRAULIC BLUE LIAS LIME.
The LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being excavated in its pure and unadulterated state, from quarries on their own property. The Company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or shipp d from their wharf, direct to all parts. Agents required, and a liberal discount allowed. Orders received by Mr. KIALLMARK, 80, Old Broad-street, City, or by RICHARD WINTER, Cement Works, Dunball, Bridgwater.

TO BUILDERS, CONTRACTORS, SHIPPERS and others.
G. BURGE, JUN, ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.
DAVIES and NORMAN, Agents.
Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.
IN EVERY VARIETY.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT.
CHARLES NELSON, having completed his works for the manufacture of the above Cement, can supply Contractors, Builders, &c. with a very superior article. The manufacturing department being under his own immediate superintendence, he can confidently recommend it for all works in which Portland Cement is used, and only requires a trial to insure approbation.
Orders addressed to
London Depôt, 16, South Wharf, Paddington,
BLYTH, BROTHERS, Sole Agents,
will meet with immediate attention.
Manufactory—Emscote Mills, Warwick.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works

PORTLAND and BATH CEMENTS.
TATHAM and CO.
14, South Wharf, Paddington.

SOUTHAM BLUE LIAS LIME DEPOT.
Glazed Stoneware Sewage Pipes.
Brick, Lime, and Cement Merchants,
TATHAM and CO.
14, South Wharf, Paddington.

PORTLAND and ROMAN CEMENT.
PLASTER of PARIS
Manufactured by J. M BLASHFIELD, at Millwall, Isle of Dogs, Warehouse, No. 1, Wharf, Paddington-basin.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.
These cements set under water in a few minutes, and are not affected by extreme heat or cold.
FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL — Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Maulc, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

11, George-yard, Lombard street, City

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccos dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no coal-burning—sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and 1 Sea-street, Liverpool

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 5, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

HUBBUCK'S WHITE BODY PAINT of superior body to the Best White Lead, whilst it is as smooth and permanent as Zinc Paint. One coat laid on as directed is equal to two coats of White Lead, whilst the consumption of material is less than for one coat. It dries very fast and hard.
HUBBUCK'S STONE COLOUR BODY PAINT the same as the former, at three-fourths the price.
HUBBUCK'S PATENT WHITE ZINC PAINT is invaluable for Iron Ships and iron exposed to salt water; neither blue water, nor noxious vapours from cargo, nor heat on funnels of Steam Vessels act upon it. Sold by the Wholesale Paint Dealers, in original packages, stamped, HUBBUCK, London, PATENT; and when so marked the quality is guaranteed.
HUBBUCK'S COPPER COLOUR ENAMEL PAINT prepared expressly for the bottoms of Iron and Wood Steam Ships, a protection from rust and incrustation. Timber coated with this Enamel is not attacked by the worm, neither do barnacles attach to it.
Full particulars of THOMAS HUBBUCK and SON, Paint and Varnish Works, opposite the London Docks, London.
OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

FREEN and CO.'S PORTLAND CEMENT and LIME WORKS, WOULDHAM, near Rochester.—These Works having obtained Letters Patent for the Manufacture of Cement, by which very great and important advantages are obtained over the old method of manufacture, insuring at once uniformity of colour and quality. Merchants, Contractors, and Builders are informed that they can now be supplied with any quantity, either for home or foreign markets, for wholesale orders, on advantageous terms.—Samples and prices forwarded, on application at the Works; or to Mr. W. C. ATKINSON, 56, Moorgate street, City; from whom also testimonials from eminent engineers as to quality may be obtained.

DOVERCOURT CEMENT WORKS, HARWICH, ESSEX.
JOHN PATTRICK being now the only ROMAN CEMENT Manufacturer at Harwich, hereby informs the public that he continues to carry on a Wholesale Business, and offers to Contractors, Builders, &c. by the freight or half freight, ROMAN CEMENT of the best quality upon advantageous terms.—Application either at Harwich or at his Agent, GEORGE HORKES, 20, New Ormond street, Queen-square, London.
P.S. Inland London trade will in future be supplied from Messrs. ROBINS and CO. Scotland-yard, Westminster, instead of Whitefriars.

FRONTS of HOUSES. — GREENE and CO.'S PORTLAND CEMENT WASH will not vegetate, and equal to Oil Paint for durability. In casks of 1 cwt. for 10s.
DAMP WALLS.—GREENE and CO.'S OXIDE SOLUTION PAINT, a guaranteed remedy, sold in quantities to cover 200 square feet, for 13s.—To be had only of the Inventors, GREENE and CO. 22, Norfolk-street, Islington.

BLUE LIAS LIME.—CHARLES NELSON begs to inform Engineers, Architects, Contractors, Builders, and the Trade in general, that he is prepared to supply direct from the Works in his own boats any part of the Thames, River Lee, on any canal or by rail to all parts of the kingdom, large quantities of the above GENUINE HYDRAULIC LIME now so extensively used.
Quality, Weight, and Measure may at all times be strictly relied on, references in proof of the above can be given.
N.B. The Captain of the Boat will always bring with him the Grand Junction Canal Note, from which the contractor will be enabled to know exactly what weight of Lime he is paying for.
All orders addressed to the—
LONDON DEPOT, 16, SOUTH WHARF, PADDINGTON.
BLYTH, BROTHERS, SOLE AGENTS,
Will be promptly attended to, and any further information can be obtained from them.
Works, Stockton-field, near Southam, Warwickshire.

PLASTER of PARIS.—MESSRS. BLYTH, BROTHERS, beg to acquaint the trade, that they have made a considerable reduction in price; the quality they are now manufacturing cannot fail to give entire satisfaction. Samples and prices forwarded to any part of England, or the metropolis. No extra charge made to any wharf or railway station in London. Any further information can be obtained at their Works, Baldwin's-place, Gray's-inn-lane, Holborn; or at the Blue Lias Lime Depôt, 16, South Wharf, Paddington.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.
Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 6d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

BLUE LIAS LIME.—Messrs. GREAVES and KIRKSHAW having completed their Works on the Birmingham and Oxford line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway.—Greaves's Blue Lias Lime. Portland, Bath, and Lias Cement. Works, at Harbury, Stockton, and Wilmcote. Office, at Warwick

GREAVES'S BLUE LIAS LIME.—The above Lime supplied direct from the works to wharfs alongside the rivers or canals, railway stations, or vessels in the docks. A large supply always in stock. CHARLES RICHARDSON, Brick, Lime, and Cement Merchant, 3 and 6, South Wharf, Paddington.

NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME.
WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam

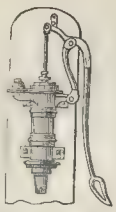
FIRE BRICKS, Stock Bricks, Fire Tiles, and Iron Roofing for Sale, at the Gas Works, School-house-lane, Ratcliff.

IMPROVED BRICK and QUARRY PRESSING MACHINES, made by THOMAS PORTER, LONDON-ROAD, Leicester.—T. P. begs to inform Architects, Builders, Brickmakers, and Others, that he is now engaged in making very superior PORTABLE BRICK-PRESSING MACHINES, at considerably reduced prices. The boxes are lined with brass
For design of Press, refer to "The Builder," January 12, 1856.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boy to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 15, 1856.—Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.



BRICK and PIPE MACHINES, manufactured by PORTER, HINDE, and PORTER, Engineers, Carlisle. The manufacturers invite attention to PORTER'S and THE AINSLIE CO.'S PATENT MACHINES for making solid and other Bricks, Quarls, Tiles, Cornices, Socket and Plain Pipes, &c. which they recommend as best adapted for producing good bricks or pipes where quantity is an object.
These machines produce articles superior to any hitherto made by other methods; they are simple in their construction, and not liable to get out of order. They are being largely adopted by brickmakers: in one brickfield near London there are eighteen of the Ainslie machines in use.
The manufacturers particularly direct attention to the combined PIPE and BRICK MACHINE, for the purpose of purging the clay with less power and of producing the largest number of good bricks of any machine yet offered. This machine was tried at the last meeting of the Royal Agricultural Society of England, when it purged and moulded at the rate of 1,800 bricks per hour, and was commended by the judges; and at the late Paris Exhibition the jury awarded for it a first-class medal.
This machine may be seen at work at Carlisle. The following is from the *Times* of July 26, 1855:—"A very high opinion was formed of the value of this machine by those who witnessed its performance yesterday."

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Robert Mr. LAWES, 1, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the gutter tile is made to form a sharp and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the tile to the eave. It is cheap and permanent, and removes all dirt. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvertoft, near Rugby; or in London, Gloucester, or Bridgewater.
Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to
JOHN WARNER & SONS'
PATENT VIBRATING
STANDARD PUMP,
which is recommended for the simplicity of its construction, and the ease with which it works.
By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than Pumps made on the old plan.
Beer and Water Engines for raising fluids from a depth not exceeding 25 feet; also, Gas Lon Engines constructed on the same principle.
JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

B. FOWLER & CO.'S

PUMPS ON HIRE.
Pumps of any size, single or double barrel, up to double 18-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pail- 2 s per doz. painted.
Ditto .... 4ss per doz. galvanized

Upper Ground-street, Blackfriars Bridge, Surrey Side.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side.

PARSEY'S REVOLVING STEAM-ENGINES (the accomplishment of circular motion) are superior to all others, as PUMPS, being all metal, with at leather or packing, are equally good for hot or cold liquors, and are not liable to choke. A vast improvement, where pumping and drainage are required.—To be seen at Mr. PARSEY'S Depôt, Great Scotland-yard.

STEAM-ENGINES—Stationary and Portable.—To CONTRACTORS.—Messrs. MEDWIN and HALL, Engineers, 92, Blackfriars road, have a large stock of stationary and portable STEAM ENGINES, strong and simple, built and second-hand, of various useful powers, either for SALE, or TO BE LET on HIRE, by the day, week, or any time required, and are ready for immediate delivery.—May be seen at the above address.
N.B. Several SETS of PUMPS TO BE LET, with driving gear

STEAM POWER.—TO BE LET, a spacious FLOOR, with a 2-horse power STEAM ENGINE, in best-rate condition.—Apply to Messrs. DAVIES and CO. 100, Long-acre

TO WATER COMPANIES AND PLUMBERS
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of such high pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closet and Basin with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.
LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

CHAS. MACINTOSH and CO. Patentees of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS of WATERPROOF, AIRPROOF, and ELASTIC RUBBER GOODS beg to inform all persons who desire to correspond with them direct, that their SOLE ESTABLISHMENTS are No. 3, Cannon-street West, London, and Cambridge-street, Manchester. This notice is necessary, as the term Macintosh Depôt, Macintosh Warehouse, &c. is frequently adopted both in London and the country by vendors of India-rubber goods, who deal in articles not of the manufacture of CHAS. MACINTOSH and CO.—Goods manufactured by CHAS. MACINTOSH and CO. are stamped with the name of the firm.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Directors of the Company have pleasure in submitting the following Testimonial from SIR RAYMOND JARVIS, Bart., A.C.S., ISLE of WIGHT.
"Second Testimonial. March 14th, 1852. In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers well. Many Builders and other persons have lately examined the Tubing laid down in the Pump Service, first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this Testimonial it will be seen that the Sir RAYMOND JARVIS of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

TO ENGINEERS, MILL-OWNERS, &c.

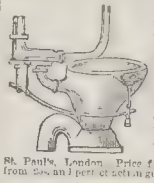
SUPERIOR STONEWARE GLAZED PIPES of a quality not to be surpassed.—E. and W. STURGE respectfully invite attention to the very superior character of their stone pipes, which they are confident are such as must give great satisfaction,—the price being also lower than many in the trade, viz. 25 per cent. discount off the list for cash. Junction Bends, &c. Pans and Traps of the first quality. Yorkshire Paving, Sinks, Slills, &c. all at low cash prices.—E. and W. STURGE, Bridge Wharf, City-road.
N.B. A small extra charge is made upon goods required to be delivered. October 1, 1855.

GREAT REDUCTION in the PRICE of STONEWARE POTTERY from this date.

VICTORIA POTTERY, LEIGH, near SOUTHEND; London Establishment,—Falcon Wharf, 81 Bankside.—DAVID MOUNTAGUE, Manufacturer of every article of Lambeth POTTERY, having now further reduced the prices, begs to offer to counties and others, STONEWARE PIPES, &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application as above. Feb. 11, 1856.

PATENT DRAIN-PIPES, UNGLAZED, manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.

PRICES.



3 inch bore, in 3 ft. 6 in. lengths, at				3d. per foot.	
4	"	"	"	"	4d. "
6	"	"	"	"	6d. "
9	"	"	"	"	9d. "
12	"	"	"	"	1s. 3d. "
15	"	"	"	"	2s. 6d. "

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture, and it is well known that red earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

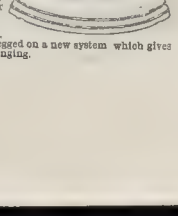
TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.
W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Acts HIGH and LOW PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 22, Old Fish-street, near St. Paul's, London. Price for Closet and Apparatus complete, from £6 and upwards, each guaranteed.

WANTED to PURCHASE, a STEAM-HAMMER, of about 10 or 12 cwt. Full particulars, with lowest price, to BARRETT, EXALL, and ANDREWES, Reading.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.



J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently introduced and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superb tone, true in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weights, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system which gives superior tone and facility for ringing.

SALES BY AUCTION.

FREEHOLD BUILDING GROUND, NOTTING HILL

MR. ALLEN DAVIS will SELL by AUCTION, at the MART, on THURSDAY, 8th of MAY, 1856, at TWELVE, in four lots, a valuable PLOT of FREEHOLD GROUND having three frontages, to Mortimer-terrace, Lee-terrace, and Clifton-terrace, close to St. Ann's-road, leading from Royal-crescent, Notting hill, divided into four plots, and suitable to the erection of moderate-sized houses, and presents an opportunity, by granting building leases, of creating freehold ground-rents.—Printed particulars may be had at the Rose and Crown, directly facing the ground of Messrs. Sturtevant and Summers, Solicitors, 5, New Bridge-street, Blackfriars; and of Mr. ALLEN DAVIS, 11, Old Jewry chambers, and at the Mart.

TO FOUNDERS, ENGINEERS AND OTHERS.

MESSRS. FULLER and HORSEY are instructed by the Assignees of R. Poldsee, a Bankrupt, to SELL by AUCTION, on TUESDAY, APRIL 29, 1856, at ELEVEN o'clock, at the FOUNDRY, old Bridge House, Block Friars, in lots, as it may receive, the PLANT and MILL WORKS of a Shell Foundry; 16-horse power horizontal steam-engine and boiler, one beam steam-engine, three drilling-machines, 100 feet shafting, Lloyd's patent fan, four wrought-iron cupolas, the brick and iron erection of six drying stoves; 300 cast shell-cases, from 6 to 13 inches; 300 tons rejected shells, 60 tons Scotch pig-iron, 30 tons cold blast pig-iron, 90 tons broken cast iron, 8,000 new fire-bricks, smith's forge and tools, patent wheelbarrow and three carts, harness, stable utensils; the temporary corrugated iron roof, 150 feet 1 inch by 57 feet wide, and numerous effects.—To be viewed on Monday previous to the sale, when catalogues may be had on the Premises; of Mr. ASHLEY, Solicitor, Old Jewry; and of Messrs. FULLER and HORSEY, Billiter-street, City.

TO NOBLEMEN, GENTLEMEN, ARCHITECTS, BUILDERS, LANDSCAPE GARDENERS, AND OTHERS. — Second Annual Sale of the valuable and beautiful Materials manufactured by Bonsome's Patent Stone Company.

MESSRS. MANSELL and ELLIOTT are favoured with instructions from the Directors of the Company, to SELL by AUCTION, on the PREMISES, Whitehall Wharf, Cannon-row, Westminster, on FRIDAY, MAY 16th, 1856, and two following days, at TWELVE for ONE o'clock precisely, in lots adapted for private purchasers, the trade, and shippers, a well-selected assortment from the extensive stock at Ipswich) of ITEMS adapted for ornamenting ecclesiastical buildings, mansions, and cottages, designed in the various styles of architecture by first-rate artists, including plain and elaborately-worked altar-pieces, screens, chimney-pieces, basso and alto relievos, pillars, pilasters, entablatures complete, capitals, caps, bases, cornices, mouldings, porch and window dressings and architraves, brackets, trusses, enriched and plain balustrading, gate and other piers, pedestals in great variety, terminals, sablar quoins, copings, and string courses. The garden decorations comprise fountains, shell and rock work, figures, vases, tazzas, flower stands and boxes fern tazzas, sundial pedestals, and terrace balustrading. The miscellaneous articles consist of coats of arms, turrets, pinnacles, fonts, mural tablets, tombs, and every item that can be made in wrought or sculptured stone. Messrs. MANSELL and ELLIOTT beg to draw especial attention to this important sale, for the Patent Stone for Stone is superior, in appearance and durability, to any other stone, being unaffected by weather or age; and as its extraordinary capabilities of application are too numerous to particularise in an advertisement, they invite an inspection of the material. The whole may be viewed three days prior to the sale, and catalogues had fourteen days prior) on the Premises, and at the Offices of Messrs. MANSELL and ELLIOTT, Auctioneers, 191, Piccadilly, Regrave square (corner of Halkeu-place), and 12, Birchin-lane, Cornhill, from whom plates of designs may be had.

ABSOLUTE SALE.—Freehold Ground Rents, Houses, and Building Ground, York road, Battersea.

MR. W. R. COMPETITIONS.

NEW WORKHOUSE for the CITY and COUNTY of NORWICH.—To ARCHITECTS.—The Guardians of the Poor of the Norwich Corporation are desirous of being furnished with PLANS, ESTIMATES, and GENERAL SPECIFICATIONS for the ERECTION of a NEW WORKHOUSE for the City and County of Norwich, on a site near the north entrance to the new cemetery, to contain 1,200 inmates. A lithographed plan of the site, with sections, together with instructions to architects as to the wards, rooms and offices required, and all other particulars, may be had on written application to me on and after MONDAY, the 28th day of APRIL instant. The maximum sum proposed to be expended in the building is 20,000*l.* The plans, &c. are required to be sent by post, addressed to me, on or before TUESDAY, the 15th day of JULY next. Premiums will be given for the best and second best plans.
By order of the said corporation.
Norwich, April 17, 1856. E. C. BAILEY, Clerk.

TO ARCHITECTS AND BUILDERS.
THE SHAREHOLDERS of the BISHOPS STORTFORD PROPRIETARY SCHOOL having determined on the ERECTION of a RESIDENCE for one of their Masters, with suitable accommodation for Twenty-five Boarders (in a piece of land adjoining the present school premises), PLANS, ELEVATIONS, and other drawings for each house, with a specification and estimate, are hereby solicited, such estimate not to exceed 900*l.* The plans, drawings, and estimate are to be delivered on or before the 12th of MAY, addressed to the Honorary Secretary, Mr. J. B. MULLINGER, Bishops Stortford, of whom further particulars may be obtained. A premium of 5*l.* will be awarded to the author of the adopted plan.

CONTRACTS.

TO BUILDERS.

PERSONS desirous of submitting TENDERS for the ERECTION of the proposed FEMALE TRAINING-SCHOOL, Mount Pleasant, Liverpool, may obtain permission to see the plans and specification thereof, which will be open for their inspection from FRIDAY, the 2nd, till SATURDAY, the 10th of MAY, both inclusive, by applying at 98, Mount Pleasant, Liverpool; or at our Office, 4, Park-place, Clifton, Bristol. The Tenders to be sent in on or before THREE P.M. on MONDAY, the 12th MAY, addressed to Miss LESCHER, 98, Mount Pleasant, Liverpool, and endorsed, "Tender for Training-School." No pledge is given to accept the lowest or any other Tender. J. and C. HANSOM, Architects.
Clifton, April 29, 1856.

CONTRACTS.

TO CONTRACTORS, BUILDERS, AND OTHERS.
CLUN UNION.—Persons desirous to CONTRACT for MAKING IMPROVEMENTS in the DRAINAGE of the CLUN UNION WORKHOUSE PREMISES situate at Bishop's Castle, in conformity with the plans and specifications now lying in the CLERK'S office for inspection, are requested to send in Tenders, addressed to the Board of Guardians, at the Workhouse, in Bishop's Castle, on or before the 7th day of MAY next.—By order of the Board,
FREDERIC PARDOE, Clerk.
Bishop's Castle, March 14, 1856.

TO BUILDERS.—Sealed TENDERS, in one specific sum, will be received by the Director General of Contracts, Pall-mall, London, on or before the 16th day of MAY, 1856, at NOON, for the following SERVICES, at BULL POINT, near Devonport, viz.:
1. Building a Case Store, Barrel-Store, Breaking-up-House, Tanks, Privies, &c.
2. Lengthening the Siding of Railroad outside the Magazine Inclosure.
3. Building Cottages for Two Foremen and Five Labourers.
4. Building a store for Planks, Store for Flannel Cartridges, Foreman's Office, and Printing-press Room, &c.

Detailed specifications of the above four Services, with every requisite information, may be obtained at the Royal Engineer Office, Bull Point, daily (Sundays excepted), between the hours of TEN and FOUR o'clock, from the 28th of APRIL to the 14th of MAY, 1856, both days inclusive.
Royal Engineers' Office, Devonport, April 10, 1856.

TO BUILDERS AND OTHERS.
SEALED TENDERS for the following SERVICES at DEVONPORT, viz.—
1. Building Counterscarp at the New Bastion on the right of the Lines, Temporary Bridge, &c. &c.
2. Continuing the Escarp of the Lines from Stoke Entrance-gate to the right shoulder of the Flat Bastion;

For specific sums, will be received by the Director General of Contracts, Pall-mall, London, on or before the 5th of MAY, 1856. Detailed specifications of the above two Services, and every requisite information, may be obtained at the Royal Engineer Office Devonport, daily (Sundays excepted), between the hours of TEN and FOUR o'clock, from the 28th of APRIL to the 3rd of MAY, both days inclusive.
Royal Engineer Office, Devonport, 12th April, 1856.

TO BUILDERS and CONTRACTORS.—Notice is hereby given, that TENDERS will be received by the Director General of Contracts, War Department, Pall-mall, London, on or before TUESDAY, the 13th day of MAY next, from persons desirous of CONTRACTING with the War Department, for CONSTRUCTING a NEW SOLDIERS' PRIVY, and a CULVERT to the Soldiers' Barrack-road, near St. Mary's Barracks, Chatham. Plans and specifications of the works are to be seen and forms of Tender obtained, on application at the Royal Engineer Office, Chatham, between the hours of TEN and FOUR, till the 12th of MAY next, Sundays excepted. The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities jointly and separately to be bound under a penalty of 150*l.* for the due performance of the Contract. Tenders to be addressed to "The Director General of Contracts, War Department, Pall-mall, London," and to be delivered free, endorsed, "Tender for Works near Saint Mary's Barracks, Chatham." No Tender can be admitted after the said 13th day of MAY, 1856.
N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, Chatham, April 22, 1856.

ROYAL ENGINEER CONTRACT.—WAR DEPARTMENT.—The War Department being about to enter into CONTRACTS for the following Trades at Woolwich, Purfleet, and Shoeburyness, from the date of the acceptance of the Tenders, to the 31st MARCH, 1859, viz.:—
CARPENTERS.
BRICKLAYERS.
PLASTERERS.
PLUMBERS.
PAINTERS, GLAZIERS, and PAPER-HANGERS.
PAVIORS.
SLATERS.
SMITHS and IRONMONGERS.
MASONS.

GAS FITTERS.

Such persons as may wish to tender for the same may obtain schedules by applying to the Clerk of the Works, at the Royal Engineer Office, Grand Depôt, Woolwich, on or before the 23rd MAY, 1856, after which date no schedules will be issued. It must be understood that although each party tenders and specifies the per-centage on each trade separately, yet there will be only one Contract for each Station, embracing all the several trades.

TO BUILDERS AND CONTRACTORS.
NOTICE is hereby given, that TENDERS will be received by the Director General of Contracts, War Department, Pall Mall, London, on or before MONDAY, the 12th day of MAY next, from persons desirous of contracting with the War Department for RENEWING TWO DRAWBRIDGES at Chatham Lines. Plans and specifications of the work are to be seen, and forms of Tender obtained, on application at the Royal Engineer Office, Chatham, between the hours of TEN and FOUR, till the 10th of May next, Sundays excepted. The person whose Tender may be accepted will be required to enter into a bond, with two eligible Securities, jointly and separately to be bound under a penalty of 300*l.* for the due performance of the contract. Tenders to be addressed to "The Director General of Contracts, War Department, Pall Mall, London," and to be delivered free, endorsed, "Tender for Works at Chatham Lines." No Tender can be admitted after the said 12th day of MAY, 1856. N.B.—The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, Chatham, 29th April, 1856.

CONTRACTS.

TO SCAVENGERS AND OTHERS.
THE COMMISSIONERS of SEWERS of the CITY of LONDON hereby give Notice, that they will meet in the Guildhall of the said City, on TUESDAY, the 20th day of MAY next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for CLEANSING the STREETS and REMOVING DUST, &c. from the houses of this City, for the term of one year from Midsummer-day next, agreeably to the provisions of a specification, a copy of which may be had upon application at this Office. The Commissioners will also at the same time receive PROPOSALS for WATERING certain of the STREETS of the said City twice a day, agreeably to a specification to be seen at this Office. The City is divided, for the purposes of these contracts, into six divisions. Each contractor will be required to enter into bond, with two approved sureties, for the due performance of his contract. The Commissioners do not pledge themselves to accept the lowest Tender, nor any, unless deemed satisfactory. No Tender will be received after TWELVE o'clock on the day of treaty, nor will any Tender be read which does not contain an inclosure of a 20*l.* Bank of England note, as an earnest that the same is made bond fide, which sum will be immediately returned to each person whose Tender is not accepted; and will be returned in the other cases until the contract and bond are duly executed.
JOSEPH DAW, Principal Clerk.
Sewers Office, Guildhall, April 16, 1856.

MANCHESTER and SALFORD BATHS and LAUNDRIES COMPANY.—To MECHANICAL ENGINEERS, CONTRACTORS, &c.—The Directors hereby give notice, that they are prepared to receive TENDERS for the ENGINEERING WORKS connected with the SALFORD BATHS, including Pipes, Bath-valves, Wastes, Stop-taps, Water-closets, Urinals, &c. &c.—Plans and specifications of the same may be seen at the office of Mr. WORTHINGTON, Architect to the Company, 54, King-street, Manchester, on and after FRIDAY, MAY 2nd, and all Tenders to be delivered at his Office on or before FRIDAY, MAY 9th.—By order of the Directors,
HUGH FLEMING, Secretary.
5, York-chambers, April 24, 1856.

TO GENERAL CONTRACTORS.
MARSH CHAPEL and GRAINTHORPE INCLOSURE, LINCOLNSHIRE. The Valuer acting in the matter of the Inclosure of the Outmarsh and Fitty lands at Marsh Chapel and Grainthorpe, in the County of Lincoln, is desirous of receiving TENDERS for the Execution of the following Works; viz.:—
TO EXCAVATORS, CONTRACT No. I.
For the Construction of One Mile and 50 chains in length of New Sea Bank, and the Excavation of 60 chains in length of New Drains.
TO SLUICE BUILDERS, CONTRACT No. II.
For the Erection of a New Sea Sluice of Brick and Stone, with land and sea doors, 16 feet waterway, with all the necessary Piling, &c.
Plans and Specifications of the above Works may now be inspected by Contractors, &c. until the 30th day of MAY next, at Mr. LEWINS, the Witham Office, Boston, of whom all necessary information may be obtained. Separate Tenders for the above two Contracts are to be delivered to me at my residence, before TWELVE o'clock on MONDAY the 9th day of MAY next. SAMUEL VESSEY, Valuer.
Manor House, Halton, Spilsby, April 28th, 1856.
Ample Security will be required, and the Valuer will not be bound to accept the lowest Tenders submitted, but will have the option of accepting any offer for Contract not entirely separate and distinct from any offer for Contract No. 2, and does not mean Grainthorpe Haven is navigable for small craft at Spring tides, to within 12 yards of the new Sea Sluice and Bank.

CONTRACTS for GUERNSEY and other GRANITES, and for KENTISH RAG STONE. PARISH of ST. PANCRAS, in the County of Middlesex. DEPARTMENT of WORKS.—Notice is hereby given, that the Highways, Sewers, and Public Works Committee of the Vestry of the Parish of St. Pancras, in the county of Middlesex, will meet at the Office of the Department of Works, Pratt-street, Hampstead-road, on FRIDAY, the 9th day of MAY next, at half-past THREE o'clock in the afternoon, to receive TENDERS for CONTRACTS to SUPPLY the said Vestry with the following MATERIALS, viz., "Broken," "Ring Small," and in Lump, viz.:—Blue Guernsey, Granite, Crohy Granite, Markfield Granite, and Kentish Rag Stone, all of the best and hardest description; to be delivered alongside the Wharf adjoining to, and alongside of, the Regent's Canal, at Camden-town, near Ball-bury street Bridge. Sealed Tenders to be sent in, signed by the proposed Contractor, with the names and description of two good and sufficient sureties for the performance of his Contract, to the Office of the Department of Works, by or before TWELVE o'clock at noon, on the said FRIDAY, the 9th day of MAY next, and a sample of each description of stone to be deposited at the Office at the same time. The Vestry do not bind themselves to accept the lowest, or any Tender. No Tender will be received or accepted unless made out on one of the printed forms, which, with further particulars, can be obtained on application to the Chief Surveyor, at his Office, as under. By order,
G. W. F. COOK, Vestry Clerk.
Department of Works, Edward-street, Hampstead-road, April 28, 1856.

BOROUGH of STOCKPORT.—To CONTRACTORS and BRIDGE-BUILDERS.—The Council of the Borough of Stockport are desirous of obtaining TENDERS for the ERECTION of a STONE, or STONE and BRICK, BRIDGE, of three arches, over the river Mersey, between Heaton-lane and Chester-gate, in the Borough of Stockport, together with the approaches thereto. The plans, &c. may be inspected at the Offices of Messrs. CAWLEY and RADFORD, Civil Engineers, 64, John Dalton-street, Manchester, on and after MONDAY, the 5th day of MAY next; and sealed Tenders must be delivered at the Court-house, Stockport, addressed to the Chairman of the Municipal Tolls Committee, on or before MONDAY, the 19th MAY next. JOHN VAUGHAN, Town-clerk.
Court-house, Stockport, April 29, 1856.

[For remainder of Contracts see next page.

CONTRACTS.

TO BUILDERS.—TENDERS are invited for the ERECTION of a CONCERT ROOM at the RISING SUN TAVERN, opposite the Barracks, Knightsbridge. The Plans and Specifications may be seen on the Premises; and after TUESDAY, 6th inst. The Proprietor does not bind himself to accept the lowest Tender.

MANAGER'S HOUSE and OFFICES, BLAENAVON WORKS.—To BUILDERS and CONTRACTORS.—Parties desirous of TENDERING for the ERECTION of a DWELLING-HOUSE and OFFICES for the Manager of the Blaenavon Company may inspect the Drawings and Specifications at the Offices of the Architect on and after WEDNESDAY, the 7th instant.—Tenders to be left or delivered before SIX p.m. on WEDNESDAY, the 21st instant.—The Directors of the Company do not bind themselves to accept the lowest Tender or any Tender.

R. G. THOMAS, Architect and Engineer.
Newport, Monmouthshire.

N.B. Quantities will be furnished.

NEW BAPTIST CHAPEL, NEWPORT.—To BUILDERS and CONTRACTORS.—Parties desirous of TENDERING for the ERECTION of a NEW CHAPEL for the Congregation of English Baptists at Newport, Monmouthshire, may inspect the Drawings and Specifications at the Offices of the undersigned, on and after THURSDAY, the 8th instant. Tenders to be delivered before SIX p.m. on THURSDAY, the 22nd instant. The Committee do not bind themselves to accept the lowest Tender.

R. G. THOMAS, Architect, Newport, Monmouthshire.

N.B. Quantities will be furnished.

BRAINTREE CEMETERY.—The Burial Board for the parish of Braintree, in the county of Essex, are prepared to receive TENDERS from persons willing to contract for the ERECTION of FENCES at their new Burial ground in Braintree:—

No. 1.—The front fence, to be a brick retaining wall, with wrought-iron palisading upon it.

No. 2.—The division fence, to be a continuous wrought-iron fence, with gates.

The whole to be completed by the 1st of JUNE next. Specifications, drawings, and forms of contract may be seen at my Office, or at the Office of JOHN JOHNSON, Esq. S, Whiting-street, Bury St. Edmunds. Sealed Tenders for either or both of the above works to be delivered to me at or before TWELVE o'clock at noon on the 7th day of MAY next. The contractor to find sufficient sureties if required. The Board do not bind themselves to accept the lowest or any Tender.—By order of the Board.

Braintree, April 30th, 1856. A. CUNNINGTON, Clerk.

TO BUILDERS AND CONTRACTORS.

LOUGHBOROUGH CEMETERY WORKS.—The Burial Board for the Parish of Loughborough, in the County of Leicester, are prepared to receive TENDERS for the several works (which will be divided into sections), required to be done in the ERECTION of two CHAPELS (connected with tower and spire), lodge and other buildings, &c. Also for the formation of roads, walks, flowering, and surface draining.—The plans and specifications may be seen at the Offices of the architects, Messrs. BELLAMY and HARDY, 36, Boosdgate, Lincoln, and after the 5th day of MAY next, until the 16th day of MAY inclusive; and the said drawings and specifications may be viewed on and after the 17th day of MAY, until the 27th day of MAY inclusive, at the Offices of Messrs. H. and W. H. TOONE, Solicitors, Loughborough, where sealed Tenders, are to be delivered addressed to the Chairman of the Board, not later than the 28th day of MAY, endorsed "Tender for Cemetery Works." The Board do not bind themselves to accept the lowest Tender.—By order,

W. H. TOONE, Clerk to the Burial Board.

Loughborough, April 28, 1856.

TO CONTRACTORS FOR SEWERS, BUILDERS, AND OTHERS.

THE VESTRY of the PARISH of ST MARTIN-IN-THE-FIELDS will meet on THURSDAY, the 8th of MAY next, to receive TENDERS for the SUPPLY of MATERIALS and the EXECUTION of such new and measured WORKS, required for the Sewers and Drains within this parish. Printed forms of Tenders, and schedules of prices upon which the Tenders must be based, and the conditions of contract, may be obtained of Mr BURSTALL, Surveyor to the Vestry, at his Office, No. 15, Castle-street, Leicester-square, on and after the 2nd of MAY, between the hours of TEN and FOUR, on payment of 5s to be returned to parties tendering, on the delivery of such Tender and Tender sealed Tenders must be delivered (sealed up) at the Vestry office, endorsed "Tender for Sewers Work," before FOUR o'clock p.m. on the day of meeting. The contractor will be required to execute a contract, and two responsible sureties to execute a bond with him, for the due performance thereof, to be prepared at his expense. The Vestry do not bind themselves to accept the lowest or any Tender.

J. DANGERFIELD, Vestry Clerk.

Vestry-house, St. Martin's-place, April, 1856.

TO PAINTERS AND OTHERS.

WORK required to be done at the Theatre Royal, Drury-lane: Painting, Whitewashing, Colouring, &c. A specification of the work required (prepared by Messrs. NELSON and INNES, Architects) can be seen on day on application to Mr. FREDERICKS, at the *Sunday Times* Office, 103, Fleet-street.

TO BUILDERS AND OTHERS.

NOTICE is hereby given, that Plans and Specifications for ENLARGING, REPAIRING, and otherwise altering the parish CHURCH of ST. JAMES, QUEDGELEY, in the county of Gloucester, and in the diocese of Gloucester, will be for inspection at the Diocesan Registry Office, Gloucester, on the 5th of MAY, and five following days; and all persons willing to CONTRACT for the same must send in sealed TENDERS, addressed to CURTIS HAYWARD, Esq. Quedgeley House, near Gloucester, on or before the 17th of MAY. The lowest Tender will not necessarily be so opted. The contractor will be expected, at his own expense, to enter into the usual legal bond, with two good and approved sureties.

TO BUILDERS.

SUCH Bricklayers, Masons, Plasterers, Carpenters and Joiners, Plumbers, Glaziers, Slaters, and Painters as are willing to TENDER for the ERECTION of a DWELLING-HOUSE on the Driffield Estate, the Wolds, York, may step at the drawings and specifications at our Offices from the 8th to the 15th inst. inclusive. Sealed Tenders are to be delivered to the undersigned, addressed to the Board at FIVE p.m. Security will be required for the due performance of the Works, and it is expected that tenderers will attend at the exact time. Under Schedules of Quantities may be obtained on application, and offers to Supply Bricks, &c. to the Contractor will be received by JOSEPH ROWNTREE and JOSEPH SPEAS.

J. B. and WM. ATKINSON, Architects.

16, Micklegate, York, 3rd May, 1856.

NORTH AYLESFORD UNION.—To BUILDERS.—The Guardians of the North Aylesford Union are desirous of receiving TENDERS for the ERECTION of a new INFIRMARY and other BUILDINGS, and for making roads and paths as may be required to be set out on the Union Workhouse Estate. All Tenders must be addressed, free of carriage, to the Union Workhouse aforesaid, and endorsed "Tender for Works at the North Aylesford Union Workhouse," at ELEVEN o'clock in the forenoon of THURSDAY, the 29th day of MAY next, at which time the Tenders will be opened, and parties on their behalf, must be in attendance. The plans and specifications may be inspected at the Union Rooms, and copies and particulars may be obtained from Mr. MARTIN BUILDER, Architect, Maidstone. The bills of quantities and form of Tender are to be obtained at the Union Rooms, and are to be delivered with each copy. The Guardians will not be bound to accept the lowest or any Tender, and security will not be required for the performance of the Works by the person whose Tender may be accepted by the Board.

J. S. BULLARD, Clerk to the Board of Guardians.

Star-hill, Rochester, 30th April, 1856.

CONTRACTS.

TO BUILDERS.

PERSONS willing to CONTRACT for the ERECTION of a new WING to the mansion of Sir Henry G. Cotterell, Bart., may see the drawings and specification on and after MONDAY the 5th inst. by applying to Mr. WILSON, as above, orders to be sent in on or before TUESDAY, MAY 20. The proprietor does not bind himself to accept the lowest or any Tender, for which any allowance is made for Estimates.

Garrons, near Hereford, May 1st, 1856.

GREAT WESTERN RAILWAY MAINTENANCE.—The Directors of the Great Western Railway Company will receive TENDERS for the MAINTENANCE of WAY, for a term of years, on the following portions of their lines, viz.:—

BRISTOL CONTRACT.—Extending from Reading to Bristol, and including the line from Didcot to Oxford, and the West and Somerset lines, from Chippenham to Frome, Warminster and Radstock, a total length of about 125 miles.

SWINDON CONTRACT.—Extending from Swindon to Tetbury-road, and from Kemble to Cirencester, a total length of about 18½ miles

WOLVERHAMPTON CONTRACT.—Extending from Birmingham to Priestfield Junction, a length of about 10 miles.

Specifications may be seen, and further information obtained, at the Company's Offices, Paddington, on and after MONDAY, the 5th MAY next. The Tenders must be addressed to the Directors, and delivered at the Secretary's Office, Paddington, before TWELVE o'clock, on WEDNESDAY, the 4th JUNE next.—April, 1856.

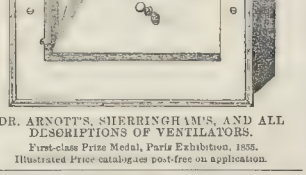
LONDON and NORTH-WESTERN RAILWAY.—To CONTRACTORS. The Directors of the London and North-Western Railway Company are prepared to receive TENDERS for the CONSTRUCTION of the BRANCH RAILWAY from Watford to St. Albans. Parties desirous of tendering may see the drawings, and obtain a statement of the quantities, at the Engineer's Office, on MONDAY, MAY 5, between the hours of TEN and FOUR o'clock. Sealed Tenders, addressed to the Secretary at this Office, to be sent in, on or before WEDNESDAY, MAY 14, at TEN o'clock a.m. The Directors do not bind themselves to accept the lowest Tender.—By order,

CHAS. D. NEWART, Secretary.

Secretary's Office, Euston Station, April 25, 1856.

WEST HARTLEPOOL MARKET.—EXTENSION of TIME.—Notice is hereby given, that the time within which Tenders for these works will be received is extended to MONDAY, the 5th MAY next, at noon.—By order,

W. W. BRUNTON, Clerk to the Commissioners.



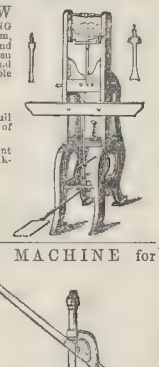
April 24, 1856.

HART AND SON,

IRONMONGERS AND MANUFACTURERS,

53, 54, 55, & 57, WYCH-STREET, STRAND,

London.



DR. ARNOTT'S, SHERRINGHAM'S, AND ALL DESCRIPTIONS OF VENTILATORS.

First-class Prize Medal, Paris Exhibition, 1855.

KIMBERLEY'S NEW PATENT MORTISING MACHINE occupies but little room, is most simple and durable, and complete within itself, with seven chisels and large gear drivers, and never a screw, is almost impossible of injury or derangement.

Thousands who use it bear witness to it

A Book sent by post, with full particulars, and a great number of testimonials.

See, also, Kimberley's Patent Flooring Cramps, Scaffolding Brackets, Door springs, &c. &c.

London Agents—

Messrs. PUGH & CO.

No. 13, King-street, Snow-hill, Wholesale Ironmongers;

or the Works, Birmingham.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co.'s Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 28, Wallingstreet, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate sets of work, by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

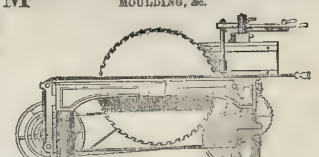
P.S. Steam Engines and Machinery constructed for

KITCHEN RANGES.—The IMPROVED PATENT LEAMINGTON KITCHINER, with large Hot-plate Hobs or Sink Ovens, &c.—For these Ranges, &c., apply to CHARLES S. LOWNDES, Manufacturer, Emscott Foundry, Leamington, or to Messrs. SLACK, Ironmongers, 308, Strand, London, where one may be seen in operation.

GAS COOKING-STOVES, for large or small establishments.—DEANE, DRAY, and CO. 1, Arthur-street East, London-bridge.

Testimonial respecting the Crystal Palace Kitchen, as fitted by DEANE, DRAY, and CO.

8, Ridgmount place, Hampstead, March 9th, 1855.



Gentlemen,—I have great pleasure in bearing testimony to the capabilities of your extraordinary Gas Cooking Apparatus, being the largest and most perfect yet in use. Suitable for hotels, mansions, clubhouses, private houses, and the army; having cooked in one day 1,000 fowls, and many cwts. of ham, beef, veal, mutton, lamb, tongue, &c.; roasting in one department a baron of beef weighing 350lbs. in nine hours, fifty-three minutes, presented by J. Banister, esq. Threadneedle-street, to the directors, for the banquet given to the foreign ministers. They have been in full operation for ten months, and are now in as perfect order as when first finished. They have not cost one shilling for repairs.

I am, Gentlemen, yours respectfully,

EDWARD HORNE.

Messrs. Deane, Dray, and Co.

MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

FENDERS, STOVES, and FIRE-IRONS.—Buyers of the above are requested, before finally deciding to visit WILLIAM S. BURTON'S SHOW-ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, FIRE IRONS, and GENERAL IRONMONGERY as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments and two sets of bars, 2l. 15s. to 6l. 10s.; ditto, with ormolu ornaments and two sets of bars, 3l. 10s. to 12l. 12s.; bronzed fenders complete, with standards, from 7s. to 3l.; steel fenders, from 2l. 12s. to 6l.; ditto, with rich ormolu ornaments, from 2l. 12s. to 7l. 7s.; fire irons, from 1s. 9d. the set to 4l. 4s. Sylvester and all other patent stoves, with radiating hot plates. All which he is enabled to sell at these very reduced charges.

Firstly, From the frequency and extent of his purchases; and Secondly, From those purchases being made exclusively for cash.

GASELIERS in GLASS or METAL.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers in metal and glass all that is new and choice in BRACKETS, PENDANTS, and CHANDELIERS, adapted to offices, passages, and dwelling-rooms, as well as to have some designed expressly for him; these are ON SHOW over his SIXTEEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unrivalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his establishment the largest and most remarkable in the kingdom—19, Oxford-street; 1, 1a, 2, 3, Newman-street; 4, 5, and 6, Perry's-place.—Established 1820.

OLD STOVES and RANGES.—T. EDWARDS, SON, and CO. have constantly on hand a quantity of OLD STOVES and KITCHEN RANGES, in very good condition, which are taken down by them at establishments when they erect new work and which are to be sold at exceedingly low prices. 41, Poland-street, Oxford street.

TO RAILWAY CONTRACTORS and RAILWAY COMPANIES.—TWENTY quite new RAILWAY-WAGGONS, for permanent way, have never been in use, precisely as those of the Great Northern Railway Company, well suited for mineral purposes; 400 Contractors' Earth-Waggons, side and end pipe, with woodwork complete; 80 Sets Cast-iron Wheels and Wrought Axles, pedestals, tip gear, straps, bolts, &c. the ironwork complete for waggons.—Apply to MATTHEW T. SHAW, Contractor for every description of Railway Plant and Stores, 64, Cannon-street, City.

RAILS.—CONTRACTORS' FLAT BOTTOM.—MATTHEW T. SHAW has 170 TONS for SALE, 40 lbs. to the yard.—Contractor for Railway Plant and Stores of every description, 64, Cannon-street.

TO RAILWAY CONTRACTORS.—TEMPORARY SLEEPERS for SALE.—The advertiser can cut down a large number of Scotch Fir Temporary Sleepers, and deliver them upon a rail, upon receiving a remunerative offer from a contractor of respectability.—Address, A. B. Post-office, Cambridge

JOHN TANN'S new patent RELIANCE LOCK and FIRE-PROOF SAFES form the best and cheapest safe in the world against fire and robbery. Testimonials to be had of Messrs. Wadsworth, Brothers, at their Warehouse, 20 WALBROOK, CITY; and at the Works, 1, Hope street, Hackney road, London. Iron Doors for strong rooms and party-walls.

THE LOCKS made under the Patents of Messrs. WILLIAM SIMSON, Banker, Edinburgh, and JAMES GIBBONS, Jun. Wolverhampton, contain:—1. Double set of Bits and Levers, which cross and hold each other. 2. A Block-cramp, grooved on both sides to fit wards. 3. A Detent, preventing the lift of the levers from being felt; the whole combination forming a perfect security against forcing and picking.—Manufactured by JAMES GIBBONS, Jun. Wolverhampton. Sold by MORETON and LANGLEY, London and Wolverhampton; and all Ironmongers.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut, Copper and Zinc, Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, 4 inch, 3s. 6d.; 5 inch, 4s. 6d.; 6 inch, 5s. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 300 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope street, Clare-market, London.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, to which they have made important additions, the main features of the same being explained in the following description and Engraving.

A represents the Patent Halter-guide and Collar-rein, the ball of which is taken to the back of the manger-works with freedom and ease up or down the guide-bar, and is noiseless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

The New Illustrated Catalogue for 1856 gratis on application. Estimates and Designs.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES
Beyond the current Price of Hoop-iron.

Gauge.	In. wide.	Per 1,000 ft.
No 16	1¼	7s. 0d.
15	1½	7s. 6d.
15	1¾	8s. 0d.
15	2	8s. 6d.
15	2½	9s. 6d.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 12 inches on both sides alternately, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming reversed claws, which are so bent, that a direct end grain of the iron is presented longitudinally, offering most powerful and effectual resistance, and which become, when built into the brick work, embedded in the structure, preventing the possibility of longitudinal escape, and a complete and permanent bonding together of the whole building is thereby obtained.

Patentee—FREDERICK TYERMAN, Architect, 44, Weymouth-street.

Sole Manufacturers—THOMAS PERRY and SONS, Government Contractors, Bilston.

London Depôt—EARL-STREET, BLACKFRIARS.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

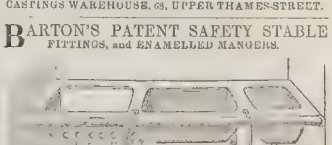
They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:
BENHAM AND SONS,
19, WIGMORE-STREET, LONDON;
and at the Crystal Palace, Sydenham.

ROYAL POLYTECHNIC GAS FIRE.—BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 144, Regent-street, London.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence the IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the Kitchen and Fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. (opening to the Monument), London-bridge. Established A.D. 1700.



BATHS and HOT-WATER APPARATUS. J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c. (1856) sent on application. Estimates and Plans for fixing given. J. TYLOR and SONS, Manufacturers, Warwick-lane, Newgate-street, London.

HEATING BY  HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be effectually warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

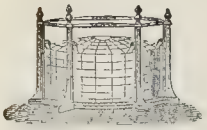
DR. ARNOTT'S SMOKELESS GRATES,

For the manufacture of which D. and E. BAILEY obtained the SILVER MEDAL at the PARIS EXHIBITION. The above excellent invention has been carefully modelled and manufactured by D. and E. BAILEY, 272, Holborn, who having experienced great difficulty in keeping pace with the increased demand for the above Stoves, have now made such arrangements as will enable them to supply their customers with the Smokeless Grates, of ordinary dimensions, from their stock on hand, which consists of various designs in black, bright, and polished steel, richly decorated with ormolu ornaments.

The great advantages of these Stoves over all others are—

1st. The entire absence of smoke.
2nd. An immense saving in fuel.
3rd. A cheerful fire, with simple means for regulating the heat.
4th. Will burn night and day, requiring only to be supplied with fuel twice in twenty-four hours.



For invalids' bed-rooms, these stoves will be found invaluable.

Prices and Prospectuses may be obtained on application where the Smokeless Grates may be seen in daily use.

D. & E. BAILEY, IRONMONGERS,
272, HOLBORN, LONDON.

STEVENS AND SON,

ENGINEERS,
IRON AND BRASS FOUNDERS AND MANUFACTURERS;

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

A
FIRST-CLASS MEDAL
WAS AWARDED TO
F. EDWARDS, SON, and CO.
AT THE
PARIS EXHIBITION,
For the SPECIMENS they exhibited of
DR. ARNOTT'S
SMOKE-CONSUMING GRATE,
AND SMOKE-CONSUMING
COOKING APPARATUS.

F. EDWARDS, SON, and CO. beg to inform the public that their STOCK of GRATES is ENTIRELY REFORMED, and consists SOLELY of GRATES on the SMOKE-CONSUMING PRINCIPLE. A large variety in real Bronze, Ormolu, Steel, and Berlin Black, suitable for Drawing-rooms, Dining-rooms, and Libraries, from 7l. to 30l.

The following are the prices of those for ordinary use:—
Black Grates, for Parlours, Offices, &c. from 4l. to 5l. 10s.; for Bed-rooms, Offices, &c. from 2l. 10s.
By the Grates on this principle, as properly constructed by F. Edwards, Son, and Co. smoky chimneys are avoided, an agreeable fire is maintained, with one-half the trouble attending the ordinary grate, and a saving of from forty to fifty per cent. is effected in the consumption of fuel.
PROSPECTUSES, WITH FULL PARTICULARS AND TESTIMONIALS, SENT ON APPLICATION.
To be seen in daily operation at the Show Rooms, 42, Poland-street, Oxford-street, London.

CHEAP AND DURABLE ROOFING.

By Her Majesty's  Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON,
Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronized by
HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT, (nails, &c.), with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION, as THEY ONLY WORKS in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

YORKSHIRE STONE.
GEO. VINT and BROTHERS, IDLE, near LEEDS.
Beg to inform Architects, Surveyors, Contractors, Builders and Masons, that they can supply to any extent all kinds of YORK STONE, including Paving, Rearing, Pell, Park Spring, Idle, Hood, Harehill, &c. of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom on the most reasonable terms.

RANSOME'S SILICIOUS STONE. All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and durable material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders to their large stock of Bangor slates, lattens, plaster, Roman, Pedrail, and Keene's cement, blue lias, Dorking and chalk lime, hair, Yorkshire flags, paving and landing stones, chimney-pots, close pans, and traps. Wash for brick, gravel and stone for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

LANCASTER STONE, so remarkable for its free working qualities and hardness and durability. Price and cost of freight, per ton, may be obtained, and supplied on at Mr. W. THOMPSON'S office, Elsworth, Grantham.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman, Caen, is shipped to order from Caen to every port. Contracts taken for any quantities. Depôts—Granite Wharf, East Greenwich; Bell's Wharf, Waterloo-bridge. Office, 240, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late GATES, Durham, and Co.), Caen, and Rotherhithe, London, General Stone Merchants and Contractors, continue to supply from their Wharf as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depôts, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts

MARKET-WHARF, REGENT'S-PARK-BASIN, WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Blue Lias Lime, Red Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. COALS and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be supplied at the lowest prices. Hoddesdon, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to

DARLEY DALE STONE.—This Stone, introduced by Sir Charles Barry at the Travellers' Club, Pall-mall, the Grammar school, Birmingham, and well known as having been selected for ST. GEORGE'S HALL, LIVERPOOL, and numerous works, also on the Railway Station, Birmingham; Borough Bank, Liverpool; Evesham-bridge; Mr. Bentley's Schools, Lambeth; and the Portico and Cornice of the Town hall, Leeds; is kept in considerable quantity at the Darley Dale Stone Wharf, City Basin, London.—Apply to W. and F. FREEMAN, Millbank street, Westminster; or GEORGE WALL, at the Quarries, near Matlock.

PARIS EXHIBITION.—ENAMELLED SLATE—TWO FIRST-CLASS MEDALS! Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1852. This beautiful material, hands more and more out of the shop, into the house, into palaces, into the mansions of the nobility at home and abroad, and into the hundred classes of public buildings, and into the humbler dwellings. The cost is small, and it may be had of any other producti in that can at all compete with it. It is made to a variety of useful and ornamental forms, and can be supplied separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments, piers and recesses, hall corner slabs for the tops of doors, dressers, sinks, bath-tops, baths, bath-tubs, etc., pillars, pedestals, brackets; wash-stand tops, billiard tables, lining to halls, vestibules, libraries.—Price list, etc., may be had on application to Mr. MAGNUS, 30 and 49, Upper Belgrave-place, Pimlico.
N.B. Palm slate work executed from a single article to the largest and most extensive contracts, for home and abroad.

THE GRAMMAR OF ORNAMENT,

BY OWEN JONES.

BEING A SERIES OF THREE THOUSAND EXAMPLES, FROM VARIOUS STYLES, EXHIBITING THE FUNDAMENTAL PRINCIPLES WHICH APPEAR TO REIGN IN THE COMPOSITION OF ORNAMENT OF EVERY PERIOD.

ONE HUNDRED IMPERIAL FOLIO PLATES.

DRAWN ON STONE BY F. BEDFORD. PRINTED IN COLOURS BY DAY AND SON.

To be published in Twenty-five Numbers of Four Plates each, price 10s. The First Number will appear on the First of February, and the subsequent Numbers be continued Fortnightly.—The Work when complete will consist of

Chapter	I.	The Ornament of various Savage Tribes	3	Plates.
"	II.	" Egypt	8	"
"	III.	" Assyrian and Persian	3	"
"	IV.	" Greece	8	"
"	V.	" Pompeii	4	"

"	XVIII.	" the Elizabethan period	3	"
"	XIX.	" the Italians	5	"
"	XX.	A series of Leaves drawn from Nature as Models of Ornament	10	"
			100	

The Author will endeavour in the several chapters to define the apparent origin and trace the development of the several styles of Ornament. He will proceed to ascertain the laws which govern it in each section; both those which are general to all styles and those which are peculiar to each. He will further attempt to show how, bearing in mind those general laws which should ever preside and pervade the works of nature and returning to her for fresh inspiration, we may yet go forward; and, whilst availing ourselves of the experience of all time, may be enabled to produce works in harmony with the principles universally followed in the best periods of the past.

In recollection of this vast amount of material has been the labour of many years. On the eve of giving it forth to the world the Author fully feels the difficulty of the task he has undertaken; he trusts, nevertheless, that within this collection, artists, and all others engaged in any way with the decorative arts, will have before them an amount of material which does not elsewhere exist in any such convenient form and in the use of which it will be his endeavour to serve them as a guide.

N.B. The Letterpress will appear at intervals during the progress of the Work. Size, 8vo. royal.

Published by DAY and SON, LITHOGRAPHERS to the QUEEN, 6, GATE-STREET, LINCOLN'S-INN-FIELDS.

*** *Intending Subscribers are requested to forward their Names immediately.*

SLATE.—HONDURAS-WHARF, BANK SIDE.—H. SHEPHERD has the pleasure of informing Builders, Architects, &c. that he has an excellent assortment of the best Slates, of the most even Sizes, Strong and all orders promptly attended to.—Offices as above, 6, Poultry, City.

TO ARCHITECTS, BUILDERS, DRAINAGE, &c.

ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in pure marble, at less than half the usual prices. Slate Cisterns made to any size.—J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now shipped, from very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Governor's House Model Prison, Pentonville, and other Penitentiaries; Maltings Farms in Berkshire and Hertfordshire, Reservoirs, the Royal Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Brabyn, Belvidere-road, where terms may be obtained.

SCAGLIOLA.—To GENTLEMEN, ARCHITECTS, and BUILDERS. J. DOWSON and SON (from Bellman's), SCAGLIOLA MANUFACTURERS, 17, Brook-street, Holborn, are now supplying Scagliola of the first quality at moderate prices. Scagliola Columns, Pilasters, &c. a new and elegant design. N.B. An assortment of Polished Scagliola always on hand.

GREEN SLATE.—The Green Slate produced from the Tyn-y-Weirlodd Quarries, has been pronounced superior to all for grain and cleavage, to any hitherto used. Roofing and Paving Slates of the best quality supplied by Mr. OLIVER, 1, Custom-court, Old Broad-street, where specimens may be seen; or to Mr. JENNINGS, Penygroes, near Carnarvon.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations, PRO MARBLE PER SQUARE YARD.

Country Builders supplied with Asphalte for footings and hard floors, with instructions for using it.

Apply at JOHN PILLINGTON, 1, Pleasant and Lemmer Asphalte Office, Mountgrove-numbers, 1, Fish-street hill, London.

N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, White friars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast or rubbish carted or shot off by the yard or per barge. Stocks, lime and old bricks for rubbish delivered per barge, in any quantity, alongside the Thames.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.

W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 21 Wharf, Harrow-road, to 9, North Wharf-road, Paddington, have now on sale good Garden and Screened Gravel for farms, &c. apply at the Wharf.

Contractors supplied to any extent.

DRAWING, &c.—One Guinea per Quarter. At this Establishment Pupils are thoroughly instructed in Architectural, Civil Engineering, Mechanical, Landscape, Ornamental, Perspective, and Water-colour Drawing; Taking-off Quantities, Measuring, Estimating, &c. &c. For prospectuses, &c. apply to Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. Offices, 24, Guildford street, Russell square.

DRAWING CLASSES.—24, Guildford-St. For Architects, Builders, and Engineers' Sons, Assistants, Clerks of Works, Pupils, Bailiffs, Masons, Carpenters, Joiners, Mechanics, and all others in general. Taking off Quantities, Measuring, Estimating, Valuing, Surveying, Levelling, Architectural Drawing, Ornamental and Water-Colour Drawing; Perspective, Isometrical, and Geometrical Drawing, Making Finished and Working Drawings, Preparing Specifications, Copying Quantities, Estimating, Measuring, &c. Valuing Builders' Works, &c. &c. Terms and Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter. There are no extras, the terms include the whole of the above, with the use of Drawing Boards, Tee Squares, Plans, Drawings, Models, &c. Prospectuses and full particulars may be had at the Offices, 24, Guildford-street, Russell-square.

TO ARCHITECTS, ENGINEERS, SURVEYORS, &c.—Maps, Plans, Architectural, Engineering, and all other Drawing, Lithographed in the best manner, and at one half the usual prices, by H. BELLENGER, 5, Basford-street, Hoxton, near Kingsland.

THE CIVIL ENGINEER AND ARCHITECT'S JOURNAL,

FOR MAY, PRICE 2s.

CONTAINS DESCRIPTIONS AND ENGRAVINGS OF

Thornton Hall, Bucks, St. John's Cathedral, Salford; Iron Lighthouse, Florida; Lowell Hydraulic Experiments; Iron Manufacture of Great Britain; St. Alban's Abbey; Reviews of Patents and New Books; Public Works of Australia; Improvements of London; Proceedings of Engineers, Architects, and Board of Trade

EXAMPLES OF BUILDING CONSTRUCTION,

FOR MAY, PRICE 2s. 6d.

CONTAINS FOUR SUPER-ROYAL PLATES OF

Details to a large scale of the New Chapel (late Diorama), Regent's-park; Roof of Dr. Fletcher's Chapel; and Rusticated Quoins, by various Architects.

Large Portfolios, price 6s. 6d; Small ditto, 4s.

Division 2 contains Four Parts, or Sixteen Plates, price 10s.

BY HENRY LAXTON,

BRITISH AND FOREIGN PATENT OFFICE, 19, ARUNDEL-STREET, STRAND.

MATHEMATICAL DRAWING INSTRUMENTS. JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior Workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, on application.

N.B. A few New and Second-hand Levels and Theodolites always for Sale.

CRYSTAL PALACE.—Picture Gallery.—Artists intending to exhibit are requested to SEND their WORKS addressed to H. M. GROVE, Esq. Portico, Bazaar, Regent-street, where attendance will be given daily, from TEN to FOUR, until the 7th of MAY, on which day no work can be received. Pictures must be in gilt frames. Water-colour drawings must also be framed, and may have moderate glazed fronts. No copies can be received for exhibition. A short description of the subjects represented must accompany each work. Artists exhibiting will have free access into the Palace, the exhibition will be opened to the public on the 19th of MAY next.

By order,
G. GROVE, Secretary.

Crystal Palace, April 19, 1856.

WANTED, a good second-hand TROUGHTON and SIMS' SPIRIT LEVEL. Apply to Mr. LOCKYER, Bookseller, &c. Lincoln.

TO STONEMASONS, BUILDERS, and OTHERS. A TRAVELLER for SALE, complete, nearly new, fitted out as a Perfumery, and Fancy Goods, and at Stationers' Trade, which the Party Is Actually Travelling from.—For further particulars apply to Messrs. THOMAS GREEN and SON, Leather Merchants, Stradford, Essex.

TO PAINTERS, BUILDERS, &c.—LIVETT, FRANK, and SON, No. 14, Borough, London-bridge, opposite the Inn, Coach Yard, Parish Church, and Railway Stations, quote their prices for each Turpentine, 2s. 8d.; boiled, 3s.; turpentine, 2s. 8d.; oak varnish, 7s. 6d. per gallon; genuine white lead, 33s.; seconds, ditto, 31s.; best town glue, 43s. per cwt., to town, brushes & cash by ton.

MR. THOMAS BERRY, Auctioneer, Valuer, and General Business Agent, No. 11, Hatcham-terrace, New Cross-road, Deptford, has the honour of informing MANUFACTURERS, TRACTORS, and the Trade generally, known or unknown, who entrust selling their business to the public at his Rooms, or by private sale, his long and practical experience and extensive connexion, enables him to carry out their views with promptness. Builders' work of every description valued.

CHUBB'S ILLUSTRATED LIST of LOCKS, FIRE-PROOF SAFES, CASH, DEED, and MAILING BOXES, with Drawings, Sizes, and Prices, will be sent by post on receipt of two stamps.—Apply to CHUBB and SON, 57, St. Paul's Church-yard, London.

ENCYCLOPÆDIA of CIVIL ENGINEERING, Historical, Theoretical, and Practical.
By EDWARD CRESY, Civil Engineer and Architect.
Second Edition, revised; and brought down to the Present Time in a Supplement, comprising the Metropolitan Water Supply, Drainage of Towns, Railways, Cubical Proportion, Brick and Iron Construction, Iron Screw Piles, Tubular Bridges, &c.
*** The Supplement may be had separately, price 3s. 6d. cloth.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

COMPLETION OF THE TRAVELLER'S LIBRARY.
Just published, in 18mo. price One Shilling.

AULDJO'S ASCENT of MONT BLANC.
A New Edition with Illustrations; forming Part 100 of the "Traveller's Library."
*** The "Traveller's Library" will be completed in Two more Parts, as follows:—
On June 1 Parts 99 and 100, "The Wit and Wisdom of Thomas Fuller." Forming Vol. L. and completing the Series.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

On May 1st was published, with Part XXXIII of the BUILDER'S PRACTICAL DIRECTOR Part I of the

SUPPLEMENTARY SERIES, containing a series of Carpenters', Joiners', Masons', Plasterers', and other artificers' Working Drawings; with Descriptions for the Establishment of Hoisters, Excavators, and Intersecting Fittings and Decorations of Shops and Factories, Cemetery and other Chapels, with Lodges, Entrance Gates, &c. and full Specifications, Descriptive Essays, and Estimates; Tables of Quantities, Scantlings, and Weights of Materials; articles on Measuring, Estimating, and Valuing; and the Laws of Dilapidations, Landlord and Tenant, and of Builders generally. Edited by EDWARD DOBSON, Architect and Surveyor, author of "A Popular Account of the Styles of Architecture; their Rise, Progress, and Present Condition;" being the Essay for which the Royal Institute of British Architects awarded the "Institute Medal" for 1854.

The Supplement will consist of from Twelve to Fifteen Parts, at 1s. uniform with the "Builder's Practical Director," each containing eight pages of letterpress and four plates of designs and working details, together with woodcuts, and will be published Fortnightly.

London: J. HAGGER, 67, Paternoster-row.

THE FREEMASONS' MAGAZINE and MASONIC MIRROR for MAY, 1856, is now ready. Price 1s.

London: HENRY GEO. WARREN, 2, Red lion court, Fleet-street; and GEORGE ROUTLEDGE and CO. Farringdon-street.

The Builder.

VOL. XIV.—No. 691.

EARLY seven years ago we pointed out the great capabilities of the port of Poole, in Dorsetshire, referred to the enormous deposits of clay in the neighbourhood which supply both the Staffordshire and the London Potteries, and ventured to predict that in a short time Poole would be the site of many manufactories. "The harbour," we said, "is an extensive estuary of about sixty miles in circumference. The quays are large, with the advantage that vessels lie afloat at all times of the tide. The dues are nominal. The neighbourhood abounds in clay and stone, the former forming the chief ingredient used in the Staffordshire Potteries, and *supplying London with the entire* material used in the numerous potteries springing up in that locality;"—and further remarked,—"It certainly appears strange that efforts have not been sooner made to develop the resources of this country; and it can only be accounted for from the want of enterprise in the county of Dorset. It is said that Sir John Guest has lately become possessor of the greater part of the country near the port; and, if so, it may be prophesied that its resources will very soon be developed."

The *Poole Herald*, not long ago, showed, in a series of intelligent and interesting articles, how fully our prediction had been fulfilled. Few believed in the probability at the time; and, at this moment, there are *six* potteries established in the neighbourhood,—some unfinished, and two in full work! A spirit of enterprise was engendered, and the resources of Poole are about to be developed in earnest.

The Bourne Valley Pottery, although not the first place in the neighbourhood where drain-pipes were manufactured, is the first where the trade was successfully prosecuted to any extent. It was commenced on the 20th of March, 1853, and the first kiln of goods burnt in June following. The land owned by the proprietors, in extent, is about 6,000 acres, mostly covered with heath and fir-trees, and lies on the right of the road from Bourne to Poole. The first "hole" was opened in September, 1852, from which was taken 10,000 tons of various qualities of clay. The works are impelled by steam power, and the financial results are said to be very satisfactory.

At the entrance to the town by Hamworthy, the owners of the Poole "Architectural Pottery," to whom we shall return hereafter, have erected some excellent structures; and more recently still a large pile of building known as the "Kinson Clay Works" has been put up on the side of the hill about two miles from the town on the Ringwood road. This building is 100 feet long by 90 feet wide, two stories high, and is lighted by 100 windows. The shaft is nearly 70 feet high, and as the works stand on an elevated site they are observable several miles to the south-east by the traveller on the Southampton and Dorchester Railway. This establishment is surrounded by upwards of twenty acres of heath land, which contains a depth of 40 feet of fine clay. It is intended to use the top clay in the manufacture of sanitary-pipes and fire-bricks, and large quantities of the lower portion or best clay will be shipped for Staffordshire for the manufacture of the best porcelain ware. The clay is generally obtainable with but little difficulty. The top soil or rubble, which in some places is only 4 or 5 feet, is removed in railway-trucks, and conveyed off on a tram-way, and deposited at a distance to fill up a flat or bottom. The clay which is then found is admirably adapted for sanitary-pipes and fire-bricks; and this being removed, 25 or 30 feet of prime clay for the manufacture of the best ware are obtainable. An engine of twenty-horse power has been erected. The six kilns of which the building now consists will shortly be increased to twelve, and two additional wings are to be built.

The importance to the potteries of obtaining large supplies of coal cheap will doubtless lead to a development of the railway system,—that is, if the Poole people are wise.

The improvement of Branksea Island is greatly owing to Colonel Waugh, and there extensive potteries are nearly completed. The large pottery is 118 feet long by 70 feet wide: in building it upwards of 300,000 bricks were used, all of which were made on the island. The builder is Mr. Wheeler, of South Avon. The engine by Wentworth and Sons, Wandsworth, is of 14-horse power, and the shaft when completed will be nearly 70 feet high. This pottery is nearly half a mile from the water-side, where, for the convenience of vessels, a pier has been carried out some way into the sea, and for the greater facilities of transporting clay from the pits and the conveyance of coal from the vessels to the kilns, a tram-way has been laid down. About 200 yards from the large pottery is a smaller one about 50 feet long by 25 feet wide, with a large store or shed at either end. Here drain and sewer-pipes have already been burnt and shipped.

The clay on the island in some places is 70 feet deep, and the quality various—some of it fit for fire-bricks, tiles, and sewer-pipes, some for terra-cotta ornaments, and the finer sorts of ware. Such as can be profitably manufactured will pass into the potteries, and the better quality will be sent to the North.

The Architectural Pottery Company, already mentioned, have submitted to us specimens of their productions in the shape of glazed-coloured bricks and varied pavement tiles, produced at moderate cost. The principals in this company, it appears, manufactured some of the glazed bricks employed in Prince Albert's model cottages put up in Hyde-park, in 1851; and having, as they believe, improved and cheapened the processes, have now erected the manufactory we spoke of at Poole.

The ordinary colour is an agreeable buff; but they make French white, blue, green, marone, in short, any colour for ornamental purposes; and the glaze is flattened so as not to be offensive, while it serves to keep the walls dry, and is cleansed by a shower of rain. Taste being brought to bear on the combination of the colours, very agreeable results might be produced, and street architecture much improved. The company propose, too, to manufacture arch bricks and moulded bricks of various sorts for buildings of an ornamental character. They must take care to have proper artistical direction in what they do in this way. Willing to aid in the introduction of good new materials for taste to work upon, we throw out an intimation which has been conveyed to us, that if any architect of reputation be about to put up a building in a good part of the metropolis, and is willing to face it with these new bricks, the company, if the design meet their approval, will place bricks at his disposal for the purpose,—their object, of course, being publicity.

We made one safe prediction as to Poole, and were not deceived; and we will now venture on a second with less certain data before us? In those immense beds of clay which underlie the district sleeps, confined by potent spells, a valuable material, not affected by the atmosphere, so malleable and ductile that it may be converted into the finest wire and thinnest sheets,—peculiarly sonorous when struck, and of beautiful colour,—in short, the metal aluminium. When the secret by which to free this from its earthy bonds is made cheap and accessible, the Poole Bank of Deposit will be a good one to draw upon.

THE ART-UNION OF LONDON.

THE annual meeting of the Art-Union of London, for the reception of the council's report, and the distribution of the amount subscribed for the purchase of works of art, took place on Tuesday, the 29th of April, at the Haymarket Theatre, by the kind permission of Mr. Buckstone.

Lord Monteagle, the president, on taking the chair, referred to the comparative thinness of the house, in consequence of the proclamation of peace at the same moment, and said that the incident which kept them away was not so foreign to the question of the fine arts as might have been imagined, and those who were engaged in cheering the heralds of peace at Charing-cross were welcoming an event which was of the highest importance to the future progress of art in this country. His first duty would be to ask Mr. Godwin to read the report.

[Before this was done, however, the procession having passed, the theatre became full. The Lord Mayor, who is a member of the council, expressed his regret, in a note, that he was unable to attend, his presence being required at the proclamation.]

The Honorary Secretary then read the following

REPORT.

THE Council of the Art-Union of London beg leave to report that the subscription for the present year, slightly affected, but not to the extent anticipated, by the increased calls on the public consequent on the war, amounts to the sum of 13,960*l.* 16*s.* The Council could doubtless have increased this sum very considerably if they had thought themselves justified in offering to the local agents a larger commission than they now receive, and in expending more money on advertisements of various kinds, and schemes to obtain greater publicity; but they feel that they would not be adhering to those principles on which the society was established, if they added very materially to that proportionate amount of expenses which the annual account printed for every subscriber sets forth in detail, or imported into this institution the feelings and machinery of a keen trade competition.

The termination of the war, on terms honourable to the Allies, advantageous to the world, and calculated to give good assurance for the future, will be a subject for congratulation to all friends of the arts of peace and of social progress, and will enable our Legislature to turn their attention to the advancement of those arts, and to the education of the people. Prosecuted at an enormous cost of money and life, the war has, nevertheless, done service by inducing the exhibition of the noblest qualities which exalt human nature, and awakening the heart of the whole world to the genuine admiration of them.

The subscribers for the current year have received their impressions from the engraving after Landseer and Callcott's "Harvest in the Highlands," a fine print, worth double the amount of the subscription, irrespective of the chance of a prize.

Each subscriber for the ensuing year will receive two engravings,—"The Piper," engraved by Mr. E. Goodall, from the picture by Mr. Frederick Goodall, A.R.A. and "The Clemency of Cœur de Lion," engraved by Mr. Shenton, from the picture by Mr. Cross. The latter, it will be remembered, was one of the rewarded results of the competition organised by the Government in 1847, when they sought to evoke the talent of the country for the embellishment of the New Houses of Parliament, the great work of our colleague Sir Charles Barry. The adornment of the Houses of Parliament, is the first and only instance in our time of an endeavour of this kind on the part of the English Government to aid the higher branches of art, and we may hope that this edifice will become a school of great value. It ought not to remain a single instance, if it be desired to advance the artistic education of the masses, and give our artists the advantages possessed by those of foreign countries. Compare the course pursued in France in this respect. Look into the galleries of the Louvre: every ceiling is covered with the work of a French artist; for the new buildings hundreds of statues have been obtained from their

best sculptors. The Hôtel de Ville glitters with colours and gold throughout its mazy length of apartments; the walls of every church afford a field for the development of the talents of their rising artists, and for the reward of those whose fame is already established. In all the provinces of France the same course is pursued where opportunities occur, and a public collection of pictures in each town operates in the same way for the support and development of artists, while it quietly exerts its elevating influence on the populations, and plays its part in the great work of national education.

The establishment of public galleries in our provinces for the reception of works of modern art, purchased by the governing body of the town, or presented by individuals or the state, would have a great effect on the style of our painters, and materially influence them in the choice of subjects. We shall all agree that it is most desirable artists should be led to direct their attention to the higher purposes of art; that, not contenting themselves with striving simply to please, they should find it their part to impress, to teach, and to elevate,—to set forth important truths and awaken noble feelings.

The formation in the metropolis of a portrait gallery of historical and remarkable persons, as proposed on the motion of the Earl of Stanhope, will be regarded as an important step in a right direction.

As regards our own operations: for a future year a series of wood engravings, from the best works of deceased British artists, under the superintendence of Mr. W. J. Linton, is in the course of production, and promises to form a work of much beauty. The council have concluded an arrangement with the members of the Etching Club, including Messrs. Redgrave, Creswick, Horsley, Cope, Taylor, &c. for a volume of etchings, to be appropriated hereafter; and they have farther to announce, that some very important works have been put into the hands of engravers for ensuing years. Mr. Ward's engraving, "Tyndale translating the Bible," after Mr. A. Johnstone, is completed: impressions will be appropriated to-day.

Mr. Edward Wyon's statuette, "The Stepping-Stones," has been produced in porcelain statuary by Messrs. Copeland: and of this, too, examples will be allotted to-day.

The bronzes of "The Duke of Wellington entering Madrid," produced by Messrs. Elkington, are now in the course of delivery; and the ornamental vase has been executed in cast-iron by the Coalbrookdale Company: examples of both will be included in the present distribution, together with bronzes of "The Queen on Horseback."

The list of local honorary secretaries and agents has been increased, especially in distant parts, including Amsterdam, the Hague, Stutgard, Frankfort, and St. Helena.

From America a considerable number of subscribers has been received, mainly through the exertions of Mr. Dennett, who has sent 350 names from Boston alone. The council but give expression to the general feeling when they repeat an earnest hope that no misunderstanding may interfere with such relationships as these between the two countries.

The retiring members of council are the Rev. Mr. Coleridge, Mr. Macdonald, Sir Wm. Herries, and Mr. Sydney Smirke; and in their place Mr. W. G. Taunton, Mr. Fras. Bennoch, Mr. J. R. Soden, and Mr. Herbert Minton, have been elected.

The reserved fund now amounts to the sum of 6,958*l.*

The statement of receipts and expenditure is as follows:—

Amount subscribed	£13,960	16 0
Pictures and other prizes	£6,031	0 0
Cost of engraving	4,694	7 5
Printing and other expenses, with a reserve of 2½ per cent. required by charter	3,235	8 7
	£13,960	16 0

The accounts have been audited as usual by two members of the general body of subscribers, Mr. Atkinson and Mr. Hensman, to whom thanks are due, and three members of the finance committee.

The sum set apart for prizes, to be selected by the prizeholders themselves, will thus be allotted, viz.:—

27	works, at	£10 each.
30	,,	15 ,,
24	,,	20 ,,
30	,,	25 ,,
20	,,	35 ,,
10	,,	50 ,,
10	,,	60 ,,
4	,,	75 ,,
3	,,	100 ,,
1	,,	150 ,,
1	,,	200 ,,

To these are added:—

11 Bronzes of "Her Majesty on Horseback."
5 Bronzes in relief of "The Duke of Wellington entering Madrid."
30 Vases in iron.
20 Porcelain Statuettes, "The Stepping-Stones."
50 Porcelain Statuettes, "The Dancing Girl reposing."
34 Porcelain Busts of Clytie.
40 Silver Medals of Flaxman; and
30 Silver Medals of the late Sir Jno. Vanbrugh.
500 Impressions of the Lithograph, "The Supper Scene;" and
250 of the Mezzotint of "Tyndale translating the Bible."

Making in all 1,130 prizes.

The bronzes, porcelain statuettes, and medals, will be allotted to the first 220 names drawn consecutively at the close of the general distribution. The mezzotints and lithographs will be allotted to names standing one-hundredth in the list preceding and succeeding that of each of the first 375 prizeholders, determined as above stated; with a proviso that a prize has not fallen to that number to-day — in that case the prize will pass to the next succeeding name. Notice will be sent to those entitled to the bronzes, statuettes, medals, and prints in the course of two or three days. The other prizeholders will be informed of the result by to-night's post.

The prizeholders of last year purchased from the various exhibitions of the season 187 works of art, to the following amounts, irrespective of the sums added by the prizeholders themselves:—

From the Royal Academy	£1,975	0	0
The National Institution of Fine Arts	1,771	10	0
Society of British Artists	1,340	0	0
British Institution	430	0	0
Water-Colour Society	415	0	0
And New Water-Colour Society	388	10	0

These works were exhibited, with the kind permission of the Society of British artists, to large numbers of persons in the Suffolk-street Gallery. It has become unnecessary to say that although the collection was also open for a time to the public without charge or limitation, not the slightest impropriety or misadventure occurred. With reference to the selection of works of art by prizeholders in the present and future distributions, your council have to state that, listening to representations made to them from Scotland and Ireland, the Exhibitions of the Royal Scottish Academy and the Royal Hibernian Academy have been added to the list of those from which, under stated conditions, works may be taken by prizeholders.

The arrangement made last year that every member who shall have subscribed for ten consecutive years, and shall not have gained a prize of any kind in that period, shall be entitled to one of the porcelain busts of Clytie, appears to have given very general satisfaction, and will be continued in operation,—the result of which, of course, will be that every subscriber will obtain a prize, at any rate, once in ten years.

For the illustration of the present report, it is proposed to make trial of the capabilities of the new process termed photo-galvanography, the leading feature of which is the production from a photograph of an engraved surface suitable for printing from, by which means impressions may be obtained with rapidity and of one uniform colour. Every discovery by which beautiful works may be readily and cheaply produced and multiplied, deserves our attention.

The council would gladly avail themselves of the art of chromo-lithography, and distribute amongst the subscribers *fac-similes* of pictures in colours, but up to this time they have not found a specimen which has altogether met their views for that purpose.

During the past year numerous requests for the loan of the bronzes produced by the Art-Union were received from educational societies and mechanics' institutions in various parts of the country, and were acceded to whenever practicable.

The exhibition of our bronzes at the Paris Universal Exhibition, served to remove some erroneous impressions in respect of the position of this branch of art amongst us which existed there, and was rewarded with a medal by the jury. The manufacture of cabinet bronzes in England is still very limited, and employs but a small number of persons. Very admirable works, however, are produced; and it offers a wide field for the exercise of art-industry. In Paris, the manufacture of bronzes constitutes a very important branch of art-trade.

The Paris Universal Exhibition proved how much our manufacturers are impeded by the want of artistic skill on the part of our artisans, and afforded the strongest reasons, in a commercial point of view, for making a knowledge of art general. In our cabinet work, carpets, paper-hangings,—in whatever involved design, the indifference that has been shown to the cultivation of the English artisan made itself apparent. If the Manchester manufacturers were to tell us what they expend annually in France for designs, and we were to learn the statistics of the Paris trade in the branches we have already mentioned, to say nothing of ormolu, lamps, and jewellery, we should see that attention in this respect will pay even financially. It has been shown in a recent Report to the Committee of Privy Council for Trade, that the more elaborate technical processes of fine carving, incrusting in mosaic, marquetry, buhl, etched metal, engraved ivory, elaborate fret-cutting, and many other processes taxing art-labour, are now scarcely attempted in English cabinet-work. And as the reporter says: "When we consider how sadly unmindful we have been for the last three generations of national education, industrial and artistic, how can we wonder that such defects should make themselves apparent, when we publicly enter the lists with other countries, whose more parental governments have opened free schools for workmen, free public libraries, free museums, and other institutions open to artisans on days and at times when their habits and means enable them to avail themselves of the opportunities offered for self improvement?" No means should be neglected to educate the public eye, and it should be remembered, as we have often before urged, that every ugly carpet laid down, every ill-proportioned and unsightly building set up, aids in preventing the acquirement of a pure taste, and is an injury to the community at large. The Fine Art section of the Universal Exhibition served to show that art was not limited to any clime, and enabled the student to weigh the various merits and defects of the modern schools of painting.

The English school extorted admiration at all hands in many important particulars; its deficiencies where they exist, were seen to be mainly attributable to a circumstance already briefly alluded to,—the want of opportunity for the development of historical art on a large scale. From the trying ordeal to which it was subjected it came out unscathed.

In another quarter, and one particular branch of art, namely, architecture, it is a subject for congratulation, that in open competition with foreign artists at Hamburgh, and, more recently still, at Lille, our countrymen have been pronounced the victors.

The establishment of the Architectural Museum at Canon-row, Westminster, and the award of prizes there to art-workmen, should not pass unnoticed, as tending to the great end we have in view. The Museum of Art at Marlborough House, in connection with the Government "Department of Art and Science," is taking important dimensions, and will not fail to produce admirable results. Marlborough House has now become mainly a training-school for masters and mistresses, district schools being established in connection with it in various parts of the metropolis; and it will interest all who are anxious to open fresh fields for the worthy employment of females, to hear, that even in such branches as geometry and perspective, required in the prescribed course of examination equally for both sexes, the female teachers in training, take, as a general rule, higher marks than the male.

Some branches of art at present altogether neglected in this country, as, for example, cameo-cutting and mosaic work, seem specially adapted for the female hand and mind, and would, doubtless, be carried to considerable perfection if the public favour could be obtained for them.

In conclusion, and to return more immediately to ourselves, the beneficial effects of the Art-Union of London, and other kindred institutions, must not be estimated only by what they accomplish at present. Their influence on the future is still more important, and holds out higher encouragement to art and those who labour to advance it. The common mind at home and in our colonies, is becoming imbued with a love of art never before felt; the results of which will be more strikingly apparent in the next generation; when, not merely a few wealthy individuals or occasional associations, will be its patrons, but the gratification of a taste for refined art will be a necessity of the general body of the people. Thus a more elevated class of subjects, and more independence of mind in the treatment of these will characterize the artists of that day, when sure that their productions will be properly appreciated, and meet their due reward. For though we know that genius will ever struggle on, and even continue to utter the cry "*Excelsior*" when sinking, overwhelmed by the snows and chilling atmosphere of that higher region where he had hoped to bask in perpetual sunshine; this swelling of the already long list of the "inheritors of unfulfilled renown" is most likely to be averted by an enlarged and appreciative public. The power of the magician augments, as the circle in which he operates is widened;—for, as Goethe well remarks,—

> "In a contracted sphere a noble man
> Cannot develope all his mental powers.
> On him his country and the world must work."

You, and every one who now aids in advancing the great objects of these societies, thus confer a widely-spreading benefit, realizing the sentiment that

"Self-love and social is the same."

The Chairman, in moving the adoption of the Report, addressed the meeting at some length, and praised the council of the Art-Union, who through sunshine and in storm, through evil report and good report, had always disinterestedly performed their duty to the institution, and now presented a report with which the subscribers could not fail to be highly gratified. After some pertinent allusions to the completion of peace, and the good effect this must have on the progress of art throughout the world, the noble lord expressed his entire satisfaction in the progress of the Art-Union, which he considered had done more for the fine arts in a national point of view than kings, lords, and commons had collectively done.

Professor Hosking seconded the motion, with a few pithy observations, and it was carried unanimously.

Mr. Bennoch, F.S.A. moved, in a pleasant speech, and Mr. Hurlstone seconded, a vote of thanks to the council, and especially to the honorary secretaries, to which Mr. Lewis Pocock and Mr. Godwin replied, the latter remarking incidentally on the ill-treatment British sculptors had experienced at the Paris Exhibition, and expressing a hope that they were not about to receive a similar affront at the hands of their own Government!

The services of Mr. T. S. Watson, B.A. assistant secretary, were acknowledged. Warm thanks were voted to Mr. Buckstone, for affording the use of the theatre, and Miss Roney and Miss Eleanor Robarts having consented to draw the prizes, the distribution commenced, Capt. Shea and Mr. Erskine Cooper, acting as scrutineers. Lord Monteagle having left the chair, it was taken by William Herbert, esq. and thanks were voted to the president, and others who had assisted.

The following is a list of the principal prize-holders:—

200*l.*—Scott, James, Wath, Rotherham.

150*l.*—Keetly, R. Grimsby.

100*l.*—Bradshaw, J. jun. Leeds; Bontoft, J. Boston; Robinson, R. St. Helen's, Liverpool.

75*l.*—Ellison, R. Lincoln; Estcourt, —— Newport, I.W.; Fairhurst, E. Ormskirk; Hindley, C. 134, Oxford-street.

60*l.*—Baker, W. P. Plymouth; Bannister, S. S. Bloomfield; Benham, J. L. Wigmore-st.; Bolton, C. 9, Newington-place; Clark, Rev. J. C. Chertsey; Evans, G. F. Hobart Town; Hill, T. W. Oswestry; Monteith, Dr. New Zealand; Westley, F. C. Cheltenham; Wigglesworth, Mrs. Boston, U.S.

50*l.*—Abraham, S. 5, Lisle-street; Blanchett, G. King-William-street; Fell, Alfred, Nelson, New Zealand; Freer, Colonel, Leamington; Kane, J. Mohill; Murdock, D. Falkirk; Pearce, Rev. T. Morden; Pilcher, Miss J. Hythe; Rawlings, R. Whitchurch, Hants; Smith, T. L. 23, Doddington-grove.

38*l.*—Abbott, F. G. Southampton-buildings; Albro, D. Halifax, N.S.; Bristow, W. Greenwich; Childs, George, Winchmore-hill; Coe, Rev. C. C. Leicester; Curling, John, Palace-yard; Dutton, T. Streatham-common; Duncan, W. Liverpool; Ferguson, F. Glasgow; Green, W. Stafford; Gwynn, Burnham, Maldon; Hardwick, R. Briggate, Leeds; Heywood, Dr. Worcester, U.S.; Hoest, A. F. Copenhagen; Jeffrey, W. Charles-street, Hampstead-road; Mitcheson, W. Sunderland; Reckless, —Nottingham; Reeler, J. H. Cape Town; Street, G. E. Oxford; Watson, G. St. Mildred's-court.

25*l.*—Armstrong, Mrs. W. C. Dublin; Boddington, R. Ditchling; Bragington, G. Torrington; Campbell, W. Port Elizabeth; Charrington, N. Leytonstone; Clifton, W. Lynn; Dalton, T. M. Cardiff; Dolland, G. jun. St. Paul's-churchyard; Dumble, Mrs. B. Bath; Dunford, R. Oborn, Sherbourne; Dunsterville, Gl. Port Egmont; Fox, H. Wood-lane, Falmouth; Good, J. H. jun. Hatton-garden; Graves, Mrs. Henry, Pall-mall; Hart, J. B. Woodbridge; Hayes, W. Halesowen; Herring, T. J. Roxburgh, U.S.; Hoby, Geo. Mount-street; Hylyn, H. Old Broad-street; Lawley, S. Birmingham; Manger, John Guernsey; Naish, J. F. Midhurst; Richardson, — Shipston; Sands, Geo. Listowel; Shepbard, M. Upper Tulse-hill; Sybray, C. Matlock; Simpson, W. B. Barnsley; Taylor, C. Port Elizabeth; Warren, H. G. 35, Gloster-street; Wood, John, 22, Watling-street.

20*l.*—Baines, J. 17, Oxford-street; Bowen, D. Alfreton; Bradford, F. A. Boston, U.S.; Brompton, J. Stoke Newington; Carr, C. 34, Goodge-street; Clarke, L. Portland Bay; Coleridge, Rev. E. Eton; Curre, E. Chepstow; Cuthbertson, Rev. W. Westbromwich; Farren, W. H. Euston Station; Grant, Jas. Boston; Harriman, B. C. Melbourne; Hodges, Jas. 29, Wych-st.; Horrex, F. Swaffham; Marshall, R. Muswell-hill; Nicholson, W. Sunderland; Reveley, W. J. Newcastle; Roberts, D. Pontypridd; Sabine, W. 54, Old Broad-st.; Stevenson, John W. Boston; Stokes, Lieut. Grimsby; Sullivan, Miss, Hampstead; Vyse, H. Wood-street; West, Hon. Wm. Port Lewis.

15*l.*—Acland, Miss L. D. Kellerton; Andrew, John, Boston, U.S.; Armitage, W. Barnsley; Beaman, Mrs. Paddington; Belcher, Miss L. M. Liverpool; Biddulph, T. T. Shadwell; Bedell, C. Mark-lane; Bolton, Right Hon. Lord Bedale; De Pass, John, Adelaide; Firbank and Son, Gateshead; Gray, Mrs. R. Birkenhead; Hargreaves, G. Grimsby; Hester, S. 4, St. Aldates, Oxford; Hinds, G. M. Queen-street, Ramsgate; Jessell, ——, Savile-row; Lark, Mrs. 22, Dawson-place; Longman, C. King's Langley; M'Lintock, Loch Inch; Massey, John, Tipperary; Mayne, R. 34, Pembroke-square; Norris, G. P. Cornwall; Oliver, T. Childoakford; Paterson, J. Belfast; Russell, Miss M. W. Clifton; Salmon, J. West Hartlepool; Trevor, J. Whitefriars, Chester; Tritton, J. M. Nimar, E.I.; Walker, L. Stockport; Wheeman, R. Brentford; Wilks, T. West Smithfield.

10*l.*—Arnold, E. Melbourne; Bearn, J. Northampton; Binnie, A. 31, Old Bond-street; Birrell, W. Glasgow; Bryant, F. 32, Leadenhall-st.; Byerly, D.D. Boston, U.S.; Dewsbury, P. R. Tring; Fraser, Mrs. Isle of Skye; Halse, W. New Plymouth, N.Z.; Hanson, J. C. Adelaide; Harvey, A. E. Philadelphia; Hale, W. Brixton; Jackson, Miss, Chester; Kitson, James, Leeds; Lyon, T. Glasgow; Oakley, J. J. 13, Little Stanhope-street; Richardson, J. Thorne; Rickards, S. Shalimar; Rogers, T. A. 23, Endsleigh-street; Simons, F. Brixton; Sinclair, R. C. Edgbaston; Snowball, Mrs. Christchurch; Settinius, J. L. Cincinnati; Stewart, Mrs. Richmond; Syrett, H. Ramsgate; Waldron, T. 8, Henrietta-street; Westley, W. 24, Regent-street.

A Bronze Statuette of Her Majesty on Horseback.—Ball, H. M. Barton; Graves, Mrs. H. Pall-mall; M'Gregor, Mrs. Liverpool; Marsh, J. Dudley; Oxley, H. Leeds; Postlethwaite, T. Liverpool; Priestly, E. R. Paisley; Stevenson, R. J. Newmarket; Stubbs, Miss, Islington; Valentine, W. Albany-street; Whitchurch, M. Melton.

A Bronze of "The Duke of Wellington's Entry into Madrid."—Cuming, W. R. Jersey; Graves, A. Pall-mall; Joyner, Mrs. Faringdon; Mackintosh, A. Bridge-street, Lambeth; Morrison, W. S. *Daily News.*

A Porcelain Statuette "The Stepping-Stones."—Redborough, A. Southampton; Christie, A. Glasgow; Cross, R. Clifton; Cunliffe, Capt. E. Preston; Dawson, John, Ampthill-square; Furnell, James, Tulse-hill; Gritten, A. 9, King-street; Harriss, J. 16, Upper Gloucester-place; Hood, R. L. Hobart Town; Kenderson, A. Falkirk; Lewis, J. Hackney; McKenzie, E. Henley-on-Thames; Mister, J. Worcester; Noble, R. Halifax, N.S.; Patten, Miss W. Warrington; Passard, Rev. H. J. Shipton; Rushbrook, Capt. Bury St. Edmund's; Swallwell, G. C. Malton; Wyllie, D. Aberdeen; Younger, Mrs. J. St. John's-lane.

A Porcelain Statuette, "The Dancing Girl reposing."—Bangs, J. L. Boston, U.S.; Bollingbrook, H. Norwich; Brassey, Mrs. Lowndes-square; Carlisle, F. Graham's-town; Clapham, C. 2, Charlotte-street; Clarke, W. Leamington; Cole, W. Birkenhead; Elliott, Dr. Radford; Farrance, H. 64, Red Lion-street; Garrett, Mrs. T. Christchurch; Gould, Mrs. Birhthorpe; Graham, T. H. Taunton; Hall, N. Newgate-street; Harris, G. Commercial-road East; Haughton, Miss C. West Derby; Hayward, J. Exeter; Hill, A. Bristol; Hornby, G. G. Liverpool; Jameson, J. A. East Ellar; Kay, E. Bury; Kennedy, J. E. 5, Alexander-square; Lamb, Lieut. P. per Thacker; Lumsden, D. Denburn; Matthews, Hon. T. M. Nassau; Messenger, R. Gresham-street; Milward, G. Lechlade; Moore, H. Kirkby Lonsdale; Morris, John, Cardiff; Morris, Com. C. Washington; Nicholls, J. B. Parliament-street; Palmer, H. D. Yarmouth; Piggot, H. Chelmsford; Pratt, M. Lombard-street; Powell, J. B. Clifton; Rogers, J. B. Geelong; Robinson, Miss S. Broughton; S. N. per C. Bishop, Burton; Sharp, T. K. Torksey; Sladden, C. Herne Bay; Smith, George, Finsbury-square; Smith, T. Levenshulme; Sopwith, T. Newcastle-on-Tyne; Squire, W. H. Liverpool; Sullivan, F. D. Limerick; Swire, Geo. Brixton; Thomson, Miss, Adderbury; Wall, J. Bridgnorth; Walker, R. Bermondsey; Williams, G. Tooley-street; Wilson, E. 17, Hamilton-street.

A Porcelain Bust of "Clytie."—Allers, W. Old Norfolk-street; Bailey, W. jun. Portobello; Brace, H. Y. Whittington Club; Boddington, J. H. Edgbaston; Bradbeer, B. M. Lowestoft; Brutchell, H. Thomastown; Clark, R. P. Bunker-hill; Cooper, Mrs. Leek; Cooper, J. Kentish-town; Darling, J. Dunfermline; Dent, Mrs. Wolverhampton; Forrest, W. T. Greenhithe; Faith, Mrs. Tulse-hill; Hull, E. Cape-town; Hunt, S. Stockport; Inderwick, A. Michael's-grove; Milman, W. H. jun. Dalston; Muggeridge, J. Tottenham-court-road; Ormson, H. Chelsea; Page, H. King William-street; Pallister, W. H. Halifax, N.S.; Piggott, Mrs. H. Harwich, Bolton; Pugh, T. E. Theobald's-road; Richardson, J. Alnwick; Roberts, E. W. Old Kent-road; Rollinson, T. Ripon; Short, W. W. Chelsea; Smollett, Miss, Peckham; Stevens, N. Threadneedle-street; Thomas, B. W. Launceston; Tucker, H. Gresham-street; Walters, G. Liverpool; Welbourne, E. Launceston; Williams, J. Worcester.

A Vase Modelled from an Antique Design.—Allen, A. Oporto; Andrews, J. Tring; Barclay, J. Dundonald; Barraud, C. D. Wellington; Betts, G. W. Spalding; Bonney, C. Hobart-town; Bowering, S. Dacca; Bull, W. B. Newport Pagnell; Burness, Jas. Edinburgh; Brown, J. B. Windsor; Cumming, J. J. South Shields; Haggard, W. D. Brighton; Harnett, W. C. Great St. Helen's; Hughes, T. Reigate; Jupp, A. Old Brentford; Kilgour, A. Dunfermline; Macnaghton, J. Manchester; Menzies, Mrs. Edinburgh; Must, T. Portland Bay; Neeles, R. Cork; Northumberland, Duke of; Savill, R. Euston-station; Stanhope, Hon. R. Spring-gardens; Stegman, Rev. W. Capetown; Sullivan, J. jun. Malta; Taylor, W. Middlesborough; Welling, W. Euston-station; Welsby, W. Ormskirk; Yale, B. B. Boston, U.S.; Yeames, Miss, Gosport.

A Medal of Flaxman.—Arbuthnot, Mrs. J. Peterhead; Barrett, H. C. Nottingham; Brooke, W. H. Huddersfield; Browning, Rev. W. T. Banbury; Burton, W. T. Oxford-street; Carter, F. Manchester; Clifton, W. jun. Lynn; Coates, G. Edgware-road; Crompton, C. Leeds; Evans, G. jun. Hobart-town; Flashman, G. Dover; Gilson, R. Rotherham; Graves, Mrs. H. Pall-mall; Grainger, R. Glasgow; Hargreaves, T. Barnsley; Hepworth, Mrs. Knutsford; Hollingshed, H. B. Blackburn; Kirby, F. W. New Finchley-road; Kirk, J. L. Leeds; Knight, J. H. Scarborough; Knowles, J. Lancaster; Lee, F. R., R.A. Cockspur-street; Mackintosh, L. J. Lambeth; Malcolm, W. H. Belfast; Marsden, R. A. Bank of England; Pannett, P. S. Church Sutton; Penry, W. A. Halifax, U.S.; Perks, A. Burton-on-Trent; Piggot, H. Chelmsford; Smith, A. Cairns-cross; Sopwith, T. Newcastle; Southcott, G. Ottery; Ward, R. Leominster; W. H. T. 6, Tavistock-square; Webber, Mrs. W. Totness; Willich, C. M. Suffolk-street; Wyse, Mrs. C. J. Wicks, H. R. Chelsea; Yarker, Rev. J. Isleworth; Yarrow, E. W. Crosby-square.

A Medal of Sir John Vanbrugh.—Adams, H. L. Manchester; Adelaide, No. 14; Agnew, W. Manchester; Anderson, J. Glasgow; Best, Captain H. R. Brompton; Bolton, Islington; Buckland, Rev. J. R. Hobart-town; Cambridge, H.R.H. the Duchess of; Chester, F. Manchester; Cope, H. G. George-court; Corbett, F. Walworth; Derbyshire, S. Manchester; Davis, R. *Daily News*; Fellowes, Mrs. Eynsford; Graham, T. H. Taunton; Greenhill, E. jun. Great Knight Rider-street; Hind, W. N. Hartlepool; Jackson, A. T. Paris; James, W. Hobart-town; Jenner, Geo. Sevenoaks; Jones, W. Bankside; Metcalf, Mrs. Croukbe; Moon, E. Portland Bay; O'Brien, O. Dublin; Schofield, J. Grafton-place; Thomas, J. Halifax; Wade, C. Stowmarket; Walker, Mrs. W. Welchpool; Ward, R. A. Maidenhead; Wilkinson, M. Sheffield.

ON THE TRIUMPHAL ARCHES OF THE ROMANS.*

HAVING been invited by my colleagues, the honorary Secretaries, to bring before the attention of members this evening some topic connected with our art, I felt that, however unworthy to address this assembly on such an occasion, I could not resist the application.

On thinking over various subjects which presented themselves, it occurred to me that Triumphal Arches form a class of monument rarely receiving the attention it deserves, and that there is much to learn and consider as to their origin, destination, and appropriateness, when considered as works of art; and that perhaps the subject is not altogether inapt on the present occasion,† when a professional brother receives from the hands of your lordship, as the organ of the sovereign and his fellow labourers in art, the highest distinction that can crown a life of earnest and zealous cultivation of a pursuit which it is the object of this Institution to promote. He has this evening come to receive the honours of an ovation, of a triumph, the congratulations of his compeers, a brilliant and lasting testimonial, which must gild his future years. And although an arch of stone, of marble, or of bronze, be not erected, as they were of old, to record the bloody victories of the Roman warrior, yet he is enabled to say with the poet,—

"Exegi monumentum ære perennius."

Before we proceed to examine the varieties and decorations of the triumphal arches presented to observation in the illustrations, it will assist our full appreciation of their arrangement and embellishments, if we are acquainted with all the particulars of the processions which the arches were intended to embody and commemorate.

Triumphal processions were of very early origin; and although writers are not agreed as to the precise conqueror by whom they were instituted, yet most appear to consider that Romulus was the first, who thus celebrated his victory over King Acron, whom he slew, and whose armour he deposited in the Temple of Feretrian Jove in the Capitol, being the first to dedicate such trophies as "spolia opima." From his time to that of Vespasian and Titus there were no less than 130 triumphs, yet so jealous had the Romans been lest these ceremonies should be too easily decreed, that it was a law that no triumph should be allowed unless 5,000 of the enemy had been slain in one battle, and this was required to be verified on oath by the general.

The conqueror having written to demand of the senate a triumph for himself and army, the proposition was scrupulously examined, to ascertain if any objections existed to granting it, and none could receive the distinction unless he were dictator, consul, or prætor. And these triumphs might be of two kinds; the principal one, when the imperator passed in procession in a chariot through the city, or an ovation when he triumphed only on foot or on horseback, or with his troops proceeded to the Temple of Jupiter Latialis, on the Alban Mount, a few miles from Rome. In the meantime the general, with his cohorts, awaited the decision of the senate outside the Porta Capena, and in the plain under the Jamiculum hill, between the Vatican and the present Castle of S. Angelo. As soon as the permission was conceded, sacrifices were offered to Mars, Juno, and Jupiter, by himself if he had the dignity of the pontificate; if not, by the pontifex maximus. He then robed himself in his triumphal habit, assumed the laurel crown, and with the palm branch in his hand, distributed honours and rewards to his brave companions in arms. To some he gave collars or rings, to others consecrated spears, and money, and ornaments; to these

* Read by Professor Donaldson, Hon. Sec. Foreign Corresponding, at the Ordinary General Meeting of the Royal Institute of British Architects, March 31, 1856, already referred to, the Earl of Ellesmere, President, in the chair.

† The presentation of the Royal Medal to Mr. Tite, V.P. M.P.

golden crowns, to those silver ones. If any had first mounted the enemy's walls he had the mural crown. If he had seized a castle, the castellated one. If he had distinguished himself on board the vessels, a rostral crown; or had he performed any brilliant feat as a cavalry soldier, the equestrian crown. Each had his appropriate reward; and bucklers, cuirasses, helmets, shields, swords, or greaves, sumptuously carved by the most eminent artists, or most elaborately decorated, were profusely given, not only to individuals, but to cohorts and legions, as standards or portions of the spoils taken in the war. Nor were the people forgotten. To propitiate their good will, abundant largesses were distributed profusely right and left.

All the temples were thrown open, and the several porticoes, theatres, fora, and other public buildings, were hung with festoons and all sorts of ornaments. The houses and palaces on every side were decorated with hangings and tapestries, and every thing that could contribute to the splendour of the festival, which was that of the people, as much as of the general and his army, and a source of joy to every rank and grade.

The procession, passing through the triumphal gate, was met by the senate, and accompanied by that august body over the triumphal bridge along the triumphal way, past the Circus Agonalis, the Theatre of Pompey, the Circus Flaminius, the Portico of Octavia, the Theatre of Marcellus, the Circus Maximus, after which it fell into the Via Appia, under the arches into the Via Sacra, along which it proceeded through the Forum Romanum, and then ascended the Capitol to the Temple of Jupiter. This circuitous route was no doubt adopted in order to afford to all the opportunity of witnessing the magnificent cortege, and allow of a greater display of the objects which swelled the lengthened procession.

The conqueror rode in a chariot, which was round in the form of a castle, and in the earlier periods was drawn by white horses. Pompey, or Camillus, was the first to substitute elephants.* Eliogabalus introduced tigers and lions, to imitate the triumphs of Bacchus and Mars; and Aurelian was drawn by stags.

If the general had children, they sometimes were with him in his chariot; or, if he had several grown up, they accompanied him on horseback. Appius Claudius had his sister Claudia, the vestal virgin, with him when he triumphed.

The description given by Plutarch of the triumph of Paulus Æmilius is so graphic and minute, and illustrates so fully the actual circumstances of this pomp, that we shall now adopt his words in order to convey an adequate idea of the splendour of that festival, which exceeded any that had hitherto been given, and does not seem to have been surpassed in after-times. "The triumph is said to have been ordered after this manner. In every theatre, or, as they call it, circus (where equestrian games used to be held), in the forum, and other parts of the city, which were convenient for seeing the procession, the people erected scaffolds, and on the day of the triumph were all dressed in white. The temples were set open, adorned with garlands, and smoking with incense. Many lictors, and other officers, compelled the crowd to make way, and opened a clear passage. The triumph took up three days. On the first, which was scarcely sufficient for the show, were exhibited the images, paintings, and colossal statues, taken from the enemy, and now carried in 250 chariots. Next day, the richest and most beautiful of the Macedonian arms were brought up in a great number of waggons. These glittered with new furbished brass and polished steel, and though they were piled with art and judgment, yet seemed to be thrown together promiscuously; helmets being placed upon shields, breastplates upon greaves, Cretan targets, Thracian bucklers and quivers of arrows huddled among the horses' bits; with the points of naked swords and long pikes appearing through on every side. All these arms were tied together with just such a liberty, that room was left for them to clatter as they were drawn along; and the clank of them was so harsh and terrible, that they were not seen without dread, though among the spoils of the conquered. After the carriages, loaded with arms, walked 3,000 men, who carried the silver money in 750 vessels, each of which contained three talents, and was borne by four men. Others brought bowls, horns, goblets, and cups, all of silver, disposed in such order as would make the best show, and valuable not only for their size, but for the depth of the basso relievo. On the third day, early in the morning, first came up the trumpets, not with such airs as are used in a procession of solemn entry, but with such as the Romans sound when they animate their troops to the charge. These were followed by 120 fat oxen, with their horns gilded, and set off with ribbons and garlands. The young men, who led these victims, were girded with belts of curious workmanship; and after them came the boys, who carried the gold and silver vessels for the sacrifice. Next went the persons with the gold coin, in vessels which held three talents each, like those that contained the silver, and which were to the number of seventy-seven. Then followed those that bore the consecrated bowl of ten talents weight, which Æmilius had caused to be made of gold, and adorned with precious stones; and those that exposed to view the cups of Antigonus of Seleucus, and such as were of the make of the famed artist, Shericles, together with the gold plate that had been used at Perseus's table. Immediately after was to be seen the chariot of that prince, with his armour upon it, and his diadem upon that: at a little distance his children were led captive, attended by a great number of governors, masters, and preceptors, all in tears, who stretched out their hands by way of supplication to the spectators, and taught the children to do the same. There were two sons and one daughter, all so young that they were not much affected with the greatness of their misfortunes. This insensibility of theirs made the change of their condition more pitiable, insomuch that Perseus passed on almost without notice, so fixed were the eyes of the Romans upon the children from pity of their fate, that many of them shed tears, and none tasted the joy of the triumph without a mixture of pain, till they were gone by. Behind the children and their train walked Perseus himself, clad all in black, and wearing sandals of the fashion of his country. He had the appearance of a man that was overwhelmed with terror, and whose reason was almost staggered with the weight of his misfortunes. He was followed by a great number of friends and favourites, whose countenances were oppressed with sorrow, and who, by fixing their weeping eyes continually upon their prince, testified to the spectators that it was his lot which they lamented, and that they were regardless of their own. He had sent to Æmilius, to desire that he might be excused from being led in triumph, and being made a public spectacle. But Æmilius, despising his cowardice and attachment to life, by way of derision, it seems, sent by word, 'That it had been in his power to prevent it, and still was if he were so disposed,' hinting that he should prefer death to disgrace. But he had not the courage to strike the blow, and the vigour of his mind being destroyed by vain hopes, he became a part of his own spoils. Next were carried 400 coronets of gold, which the cities had sent to Æmilius, along with their embassies, as compliments on his victory. Then came the consul himself, riding in a magnificent chariot; a man, exclusive of the pomp of power, worthy to be seen and admired; but his good mien was now set off with a purple robe interwoven with gold, and he held a branch of laurel in his right hand. The whole army likewise carried boughs of laurel; and, divided into bands and companies, followed the general's chariot; some singing satirical songs usual on such occasions, and some chanting odes of victory, and the glorious exploits of Æmilius, who was revered and admired by all, and whom no good man could envy."—*Langhorne.*

It seems to be admitted that triumphal arches are of Roman origin; for we have no instances of such edifices in Greece before the Roman dominion. It may be presumed, that they may have first derived their form from the temporary erections, of a rustic character, which may have been constructed to greet the conquerors as they approached the capital; or possibly were merely a more ambitious development of the rude city gates which were probably decorated temporarily, and called "arcus subitanei" for the occasions when the army returned after a victory. Fabrizzi, in his *Roma*, enlarges upon the subject, and considers that probably the arch of Romulus was of brick. Even now some are of stone, as that of Gallienus at Rome; but of course the most important are of marble, as those of Septimius Severus, and Constantine. Some presented only one opening, with an attached column at each outer angle, as that at Susa and the one at Aosta. An example of a central archway flanked on each side by two columns is frequent, as in the arch of Titus at Rome, and in that at Pola in Istria: others had two openings of like size, which also served, like the Porta S. Maria Maggiore at Rome, as city gates, and this arrangement was peculiarly adapted for the purpose to prevent confusion in those entering or going from the city. Another class consisted of three archways, a central or larger one, and two smaller side ones, as in the arches of Septimius Severus and Constantine at Rome. That city was not the only one which had triumphal arches in the centre of the city; for at Palmyra and Antiocheia is one in the middle of the grand colonnade or avenue, which traverses the centre of these towns. Fourteen arches are enumerated by topographers as having been at Rome, from the description of historians and P. Victor. Of those which remain, the first erected to any emperor was that to Titus. They were, however, frequent wherever the Roman rule prevailed, for we find them in every province in Western Spain, along the coast of Africa to the south in Egypt, to the east in Syria, and northward in Gaul. They also formed important features in many public edifices, as in the Circi, each of which had two or three, and in the fora also as at Pompeii. The via triumphalis and via sacra at Rome had a succession of them.

The Romans seem to have used the utmost license in regard to the decorations of these monuments, which, as being objects of show rather than of use, might admit of some caprice, and not be bound down to the severe canons of the art. It would appear that the composite order owed its origin to them, as affording greater opportunity for the accumulation of enrichment; but, although it is considered to be of a more elaborate and elegant character than the Corinthian, yet in truth it departs from the grace of the latter, and is heavier instead of being lighter in its proportions. The capital is obviously so, when we consider the heavy volutes of the Ionic being substituted for the caulicoli of the Corinthian. The pedestal under the columns is a peculiar feature of the triumphal arch, as also the attic above the entablature, which gives increased altitude to the mass, and tends to upraise the glorious groups of sculptures, which surmounted the whole as a crowning galaxy of splendour. Nor did the ancients consider themselves confined to any one order, for we find at Arsinoe in Egypt the Doric. This presents a tetrastyle frontispiece surmounted by a pediment, and having in front of the pilasters on each side superposed Corinthian columns and entablature of less size. In others the Corinthian or composite is indifferently adopted; but the most remarkable license occurs in the arch at Aosta, which has columns of the Corinthian order surmounted by a Doric entablature, a contrast which recals the trite remark of Horace as being applicable to architects, "quidlibet audendi."

The sculptures which adorn them are remarkable and valuable, as they hand down to us many of the incidents of the wars, which they were intended to commemorate; or circumstances in the life of the Emperor, whose memory they were proposed to honour. The arch of Titus bears even now the full-sized representation of the seven-branched candlestick and other trophies of the Jewish war. It also gives the apotheosis of the Emperor upborne to heaven on an eagle's wings. The sculptures, which crown the attic, must have been most profuse and sumptuous, consisting of the conqueror borne in his triumphal chariot, attended

* A medal of Domitian shows a triumphal arch surmounted by two chariots, back to back each drawn by four elephants, and each containing the emperor. Alluded to in the 63nd Ep. of Martial.

"Hic gemini currus nunc erant elephanta frequentem."

by Victories, and his family on horseback, flanked by trophies and warriors, forming together a numerous retinue of attendants. These probably were most frequently of bronze, possibly gilt; and the whole surface presented an elaborate profusion of sculptured embellishments. The soffits of the arches were richly coffered: the panels were filled with continuous scrolls; the friezes with processions: the spandrils to the central arch were enriched with figures of Fame proclaiming the glories of the conqueror, and the very keystones themselves were emblematically carved with winged victories.

But it appears that they were also of marble; for Pliny, I. 36, c. 5, mentions the triumphal arch erected by Augustus to Octavius, surmounted by a chariot with four horses, on which the figures of Apollo and Diana were seated, all carved by Lysias out of one block of marble, and highly praised for its excellence and great artistic merit. In fact, a triumphal arch without these full groups of figures would have been considered deficient in its chief purpose and decoration. The arch of Nero (on a coin) with its pendant festoon shows how these monuments were decorated on festive occasions.

It is remarkable that Vitruvius never alludes to triumphal arches. We may thence infer that few existed at his time, and these were not considered a special class of edifices, and had not the peculiar characteristics, particularly of the composite order, by which they were subsequently distinguished.*

THE CONDITION OF DUBLIN.

SINCE the commencement of this century, when the Irish Parliament was transferred to London, very few public buildings have been added to those which grace this metropolis; and *none* have been since erected by the nobility, whose civic palaces, inferior not even to those of London, have been nearly all sold, or appropriated to public or to commercial uses.

As in other cities and towns, railroads here have occasioned the construction of various stations at the termini; the Drogheda, the Kingstown, the Dundrum, the Great Western, and the South Western; all of which have commodious and appropriate offices; but the last, situate at King's-bridge, near Phœnix-park, and Kilmainham, presents an elevation of more than ordinary taste and pretensions.

It would appear that these vast arteries of traffic, contrary to the effect observable in London, have drawn away from the metropolis the stream of life, and spread it over the general system.

Little else has been added to the remarkable edifices, if we except some Roman Catholic churches: of these several have been raised within the period specified. The Cathedral, still incomplete as to the exterior, in Marlborough-street; the church of St. Andeon, in High-street; the Jesuits' church, in Gardiner-street—a magnificent building; the church of Rathmines, a vast pile, finished internally; St. Andeon's church, Westland-row—a fine structure; St. Paul's, Arran-quay—a classic example, in granite; the church of St. Francis, Merchants'-quay; and that of St. Lawrence O'Toole, near the Custom House;—to these may be added, a most tasteful and massive Presbyterian church, on Ormond-quay, near Essex-bridge; the front elevation (in the line of houses) presenting a pleasing portico and lofty columns in granite.

A strange difference of taste is observable in all the new places of worship of this country,—that so few are designed in that order of architecture so appropriate to the sacred temple,—the Gothic: those of the olden time,—Christchurch, and the colossal St. Patrick's were altered, or rather thrown open and improved,—want unity as to the new portions, which are of a plain, and rather *embattled* character;—the interior of St Patrick's, which is really a stupendous evidence of the Gothic, being in a state of palpable decline; the stone pillars, being in some instances *out of the perpendicular;* and the whole of it, columns, capitals, and all, incrusted with manyfold coats of exfoliating whitewash!

The powerful and sweet-pealing organ, taken from the Spanish Armada—*the incomparable choir*—the lofty aisle long drawn out, and graced on either hand with four ranges of three-tiered windows, most elaborately finished, after the fashion of monastic times; the Friars' walks (with the aforesaid crooked miniature columns), the halo of remote antiquity with which the whole pile is invested, make this church, when lighted up, a place most suitable for solemnity and deep meditation, and inspire the visitant with regret that our ancestors having done so much, our Dean and Chapter do so little.

As to the palaces of the traditional nobility, these are for the most part occupied for public uses or mercantile pursuits. One of them, Lord Powerscourt's town mansion, was several years back bought by a prosperous Scotch house (Messrs. Ferrier, Pollock, and Co. wholesale haberdashers). This building, nothing inferior to Burlington House, now presents an accumulation of merchandise surpassed by no London house, and is certainly larger and more commodious than any house in the great metropolis of trade. The front is majestic, and built of granite; and a large court-yard occupies the centre, which is accessible on three sides. Its warerooms, extending the whole length of every side, consist of four ranges, exceeding 100 feet in length, repeated on the first-floor, with a basement used as stores, and packing repositories, which employ sixty hands.

Great as is the foregoing wholesale establishment, there are in Dublin five other houses of business, as much larger as this surpasses the London establishments of a similar nature.

The magnitude of the buildings, the numerous hands therein employed, the endless variety of business carried on,—such as silks, cottons, broad cloths, hosiery, haberdashery, shoemaking, tailoring, hat trade, watch and clocks, furniture, jewellery, &c. strike the beholder with wonder at the enterprise which called such emporiums into being; but far more, at the skill and management requisite to keep the whole in action, so as to make the adventure remunerative.

Londoners, who have seen Shoolbred's, or Cook's, or Leaf's, would stand amazed at the gigantic Irish bazaars. The array is dazzling, and the intercourse after noontide like a fair; but little is known across Channel of such marvellous magazines. It is not usual to ascribe to the Irish character, aptitude for business, on such a scale; nor indeed is the genius of the nation considered commercial to any extent. This is an error, for any existing opportunities are never suffered to lie dormant or untried. But Ireland is not a manufacturing country: those elements which exist there are made available,—as in the instance of shoes, very large quantities of which are annually sent off to supply the London and other markets, and more particularly of ladies' wear. A brief description of five leviathan houses of trade may suffice to prove that if the Irish were ever unsuited to business, that character is wholly changed.

1st. Messrs. Todd, Burns, and Co. in Mary-street, not a quarter of a mile from the General Post-office. This monster pile covers an area of 117 feet frontage by 169 feet in depth, having an elaborate frontage on two sides. It consists of two immense ranges of open floors (the entrance and first floors), the basement being also used as storage and packing warehouses. There are 280 hands employed, all of whom diet in the house, and over 200 have sleeping apartments. This is chiefly a retail establishment.

2nd. Messrs. Cannock, White, and Co. in Henry-street, near the Post-office, an edifice also of considerable architectural pretensions, occupying an area of 210 feet by 130 feet, consisting, like the foregoing, of five stories, and carried up to a height of 70 feet: the first and entrance floors being thrown into four aisles, are arranged in nearly a similar manner: 280 hands are dieted and lodged here, the accommodations being scrupulously regarded,—lighting, ventilation, and the accessories of comfort carried out, even to the establishment of a library and reading-room, and the cares of the house extending to the appointment of a physician, with a sanitarium for such as are incapacitated by temporary illness. Each *employé* pays 10s. a-year to the library, and the firm adds an equal amount to its consolidation.

3rd. Messrs. McBirney, Colles, and Co. on Aston's-quay, near Carlisle-bridge, about 400 yards from the Post-office,—an enormous building, 100 feet frontage by 93 feet deep, employing 180 hands, most of them, as before, lodged on the premises: to describe the details of this house would be to repeat what was said of the preceding,—only that it was the first established of all the great retail establishments.

4th. Messrs. M'Swiney, Delaney, and Co. Lower Sackville-street, opposite the Post-office. This is, indeed, a magnificent erection in granite. It was designed and planned by Mr. Wm. Caldbeck, of Harcourt-street, and does credit to his taste and skill. The interior is truly gorgeous, in the most refined and elaborate arrangement and finish. Suited to the objects of a temple, it would be requisite to give a photographic picture of the interior to convey any idea of the richness and beauty of the achievement: like the foregoing colossal establishments, every variety of manufacture shines throughout the whole *enceinte*, which is the more imposing, as the entire interior is exhibited at one *coup d'œil*. At first a grand vestibule reveals a sweeping colonnade surmounted by galleries. An opening through the centre discloses an extended aisle ranging between other galleries, the space covered being 180 feet in depth by 93 feet frontage, and the height being carried to 80 feet!

This bazaar employs 200 hands, of whom 180 are lodged and dieted on the premises. The business is chiefly retail, save in shoes, wherein a large trade is carried on with England—that manufacture, under the encouragement of the proprietors, being wholly Irish.

Then, lastly, comes a firm of even greater magnitude, as being principally a wholesale house, the Messrs. Pim, Brothers, of George-street, occupying the whole site of the old barrack for a regiment, with rear towards the Castle. This, the concluding wonder of modern commerce, seems to be conducted with a quietude and freedom from bustle that, considering its dimensions and importance, is a marvel of admiration. 225 hands are employed herein, the great majority dwelling in the house.

With these evidences of indomitable energy before us, who can say that the Irish are not a business people? In comparison with these, the largest houses of London are but miniatures; yet when we regard the amount of trade monopolised by so few men of talent and skill, and cast a glance over the bye-streets of Dublin; when we see whole ranges, once prosperous in the various lines of shopkeeping, now reduced to lodging-houses for the working classes, it naturally occurs to the mind that so great a concentration of capital cannot be wholesome for the many.

The system pursued, of selling at a fixed price, and the great facility afforded to the simplest child, or most inexpert adult, of purchasing every article at a moderate rate,—these may bring to the inhabitants of the provinces advantages not to be disregarded. Do these advantages compensate for the extinction or limita-

N.B.—Where the proper ascriptions of the arches have been recognized, the original name is given, but in other cases the usual modern name is preserved to insure the identity.

tion of general trade? That is a question which time only can solve: if it is beneficial, the system will survive; if not, and that the appropriation be an evil, it will work its own cure.

In a city so well constructed, a vicinage so lovely, a climate so genial, endowed with a good port and harbours, and above all, with a population so intellectual, it is difficult to account for the progressive decline of much that was but recently independent and respectable. Streets, lanes, and squares—whole quarters or districts, have fallen off, and become either tenantless, or occupied by a pauper immigration. The leading streets (and they are few) do certainly keep up their pristine respectability: they are even improved; but the back settlements are *withered*; they are truly consigned to the departed emigrant, or to the evicted cottager, now a participator in contributions wrung from struggling industry.

Decaying at heart, Dublin is extending in the limbs: no symptom of waste or decay is observable in the main thoroughfares; none in the approaches, six miles off. At Kingstown, all that is luxurious is displayed by the purveyors to the human appetite; all that is fascinating to the taste; so in the main conduits, the shops discover a richness, a fulness, a display of elegance, that might argue redundancy of wealth and circumstance, amongst the felicitous dwellers in a land of picture and plenty. How fallacious would be the inference! The city is declining—its commerce is gone.

A region commanding advantages of position hardly to be equally by any other country—landscape of the most pleasing aspect, undulating plains, ever-green hills, backed by purple mountains, and the oft-recurring seas—that such a land should be *chosen*; that it should be as it is, studded with villas, ranging widely throughout the expanse of the country, is but a natural consequence; but that a city so placed should dwindle from year to year, this is hard to explain, and must remain a paradox, until the *march of peace* may explicate the problem.

Strange though it may appear, yet it is fact, that the vicinage of Dublin is more densely studded with villas, yes, and with more important country-seats, than is even the county of Middlesex. Most of the suburban districts, at two, three, and four miles, are planted on every 10 acres, with respectable and even imposing rural mansions. This species of settlement has steadily advanced, year by year, until a circuit, represented by a diameter of 15 miles, has been parcelled out, planted, and improved to the highest degree.

There is a fault, and one obvious to the eye of any foreign visitant: it forces itself upon the pedestrian, or those borne on by the popular vehicle the "*low-backed* car;" but it is painful, more particularly in a scope of country affording views of transcendental beauty: it is the horrid custom of encircling every charming retiro with a massive wall of native granite, with a wall often 10 feet high; and though here prolific nature may clothe the wall with ivy, still it bars the view.

Surely the placid state of the country, the improved social condition of Ireland, the universal peace of the world, the advance of intelligence, ought to guarantee security to the retired gentry and squirearchy of renovated Ireland!

Still all the suburbs, really the most beautiful of this charming county, are disfigured by those senseless boundaries and inclosures, despoiling those within, depriving those without, of the enchantment which nature has so lavishly expended upon the adornment of Erin.

Would that stone walls were condemned by an edict of Parliament; and that the *neat rustic* and unobtrusive wooden paling were substituted for the revolting bastions that mar and embitter the wanderer's excursion around Dublin. Send the stone to build a pier, at the *too neglected harbour of Dublin* (a quay wall parallel to the Pidgeon-House wall); to build a Temple of Peace, if you please *(hic murus ahæneus esto)*; but clear them off—the county of Dublin needs only to be seen!

So much for the county—what of the city?—who can account for its desertion, for the tenantless stores, houses, and mansions,—for the wasted and mouldering condition of once busy, populous Dublin?

The poor-rates are increasing year by year: they seem destined to be the doom of the capital, for houses may now be had at rentals not much in excess of taxes,—that is to say, in parts of the city which have long ceased to be either mercantile or fashionable. QUONDAM.

THE BARRACK COMPETITION:

ANOTHER QUESTION RAISED.

THE "Strictures by a Competitor," which you were pleased to publish from my hand, have now been open to criticism for a month; and, as your editorial observations on the question involved are now drawn to a close, together with their embodiment of explanations offered in reply to me, perhaps you will allow me a spare column for the exercise of the accuser's right of reply.

I will admit that the adjudication of the committee has been conducted no doubt in the most approved official manner, and with the most gentlemanly views; but whether the result is characterised by *practical business-like judgment*, so as to be a benefit to the public interest, and a satisfactory return for the unprecedented expenditure of care and cost which an educated and honourable profession have (with something like magnanimity, I think) bestowed upon the problem, is after all the only question to be regarded. Without being one to join indiscriminately in the popular cry against official mismanagement, I cannot help thinking that if we, the competitors, had thought over the view of this competition which I am about to state, we should have been less precipitate in rushing as we did into these now celebrated lists.

Barracks have hitherto been a province of the Royal Engineers. In the present day the science of architectural organisation, or the plan of buildings, has in England attained such efficiency, that the official routine of such a department as the Royal Engineers, in such a subject as this, must of necessity become decidedly behind the age. This is a mere axiomatic fact: I cast no reflections upon anybody. Accordingly it is resolved, official and military dignity being waived, that an appeal shall be made to the civilian profession of architects to supply that practical skill in which the very appeal itself implies the military service of the Royal Engineers to be found deficient, as we should expect. But who are to be the judges of that skill? Here official routine asserts its sway again: the office of the Royal Engineers must furnish the judges. Certain other gentlemen will be associated with them, of course; but these must be kindred spirits,—official men of another department,—colonels of regiments. If such a committee leave the actual decision of the competition, by preliminary "classification and arrangement," in the sole hands of no doubt one of the Royal Engineers,—if they then, *at their first sitting*, make a selection of eight designs from out of that bewildering display which we see at Burlington House,—if the ultimate adjudication of merit is a mere adoption of the only plan which adheres to the old system of the Royal Engineers (this I must still maintain to be the case), who can wonder at it? This is the *beau ideal* of an official process,—eminently gentlemanly, but utterly impracticable. If the Government intended really to ask the English architects for something better than a mere military department could supply, the judges of merit ought to have been chosen from the class appealed *to*, not the class appealed *from*. They ought to have been architects, with Royal Engineers and regimental officers and the like to assist when required; and there cannot be a doubt that our profession comprehends many men who, with reasonable preparation, could have accomplished the task most honourably for all. If, on the other hand, the intention of the Government was merely to collect a mass of various ideas for digestion and absorption at leisure in the Royal Engineer's office, then the act is best undescribed. The retention of all the designs, it must be owned, may not unreasonably point to this theory.

The use of Professor Donaldson's name, as having been merely "added to the committee," I would respectfully say is not calculated to add to his credit. If he is prepared distinctly to avow a full participation in the whole process of judgment, then many of us will be sufficiently surprised. If, on the other hand, his place at the board was of a different character, the expression used is at least not a very explicit one. The Great Barracks Competition will be historical ground for the next half-century.

I could not expect my interpretations of the principles of the premiated designs to be entirely free from error, but I would submit that I stand uncontradicted on every one of my criticisms which have any real importance; and this makes the matter worse than it ought to be. Mark the imperfections * charged against the design selected for adoption. * * *

I do not censure the committee, but if the fault, as I fear, is only in *routine*, this, however, makes it all the more immoveable, and all the more provoking;—a sad end, if it be so, to our expenditure of 5,000*l.*—an estimate, by the bye, which by my reckoning would not cover more than actual outlay, with, for one's own time, mere draughtsman's fare.

My objections to Nos. 2 and 3 did not need to be so pointed as those I had to urge against No. 1, for I regard this one as virtually the only selected design, especially as the other two are altogether incapable of any amalgamation with it. And universally my strictures were not so set forth as to reflect upon the skill of the designers, but upon the decision of the judges. Mr. Morgan's design itself I make no doubt is in many respects an able production, although, as I think, like the other two, on a fallacious basis, which, however, may be called a matter of intellectual accident, rather than a matter of deliberate skill. The gravamen of my complaint is simply this,—that the committee have clung to the old system of the Royal Engineers through thick and thin, and despite of whatever faults not its own it might happen to be associated with. And what I now add to this is the reflection that, all things considered, I wonder we did not foresee such a result as inevitable.

I think it would not be too much to ask that the author of the Barracks Committee's "Blue Book" should now draw up a detailed report upon the principles of the committee's selection of designs for publication. Perhaps such an account of the question might satisfy us all: at any rate, the profession of English architects occupies at the present day so honourable a position in the world's regard, as to entitle us to any satisfaction of such a kind that can be afforded.

Every one must agree with you, that the Royal Engineers ought not to possess themselves of all our designs, for leisurely digestion and application, without any sort of remuneration being offered for our trouble and expense. The Government which can afford to throw away half a million in a month or two in the single form of horses dying by the hundred, in the act of eating each other's tails amidst the snow, ought not to refuse at least 1,000*l.* as an acknowledgment of the unexampled exertions of this competition. I cannot venture to say that every design of the hundred and odd ought to be paid for; but every design not returned, and every design of available merit, ought to be paid for. And lastly, the judges of available merit ought not to be the Royal Engineers. These are the very class of persons whose own deficiencies in this very question form the basis of the application to a class more skilful.

Lastly, if my argument be sound, there follows this corollary,—that henceforward the building of barracks ought to be taken out of the hands of military designers of fortifications, and committed to the more suitable charge of every-day designers of houses. It is but an old case in a new form. Our public "services" are giving way everywhere to private contractors, and the next time we fight our new friend the czar we shall not starve our horses and men by a "department," but feed them by a contract, and perhaps destroy a fort also by an agreement under seal for so much money (the lowest tender), with the period of accomplishment fixed to a day, instead of bombarding it in vain with our own ships, and then dis-

* It is unnecessary to repeat these.—ED.

missing the admiral. By that time there will be an end of captains and majors building barracks, and then, and not till then, they will be better built. ANONYMOUS.

As a competitor both for the infantry and cavalry barracks, I should expect that if the war department appropriate any ideas of mine, they would pay me for the same: they can afford to be just, and even a little generous; and as to the retention of all the designs, if they are not strictly entitled to use the ideas contained therein, they may as well return them to their authors.

One thing is certain, that whilst taking care that no injustice is done to the successful competitors, the Government should take the present opportunity to arrange a good design, in all its details, for barracks generally, and for which they have now such ample materials in their possession. COMPETITOR.

CHURCH-BUILDING NEWS.

Hitchin.—The new Independent Chapel here was opened on 13th ult. The expenditure, including the purchase and cleaning out of property for a frontage and site, is about 2,150*l.* Of this sum 1,733*l.* odds have been realized. The chapel is in the Italian style of architecture, and is of white brick with stone dressings. The pulpit and supports of the galleries are of oak, the pews and the gallery-timbers of deal stained and varnished to imitate new wainscot. The gallery-front is painted and grained in harmony with the other parts of the interior. The dimensions are 65 feet by 41 feet.

Redditch. — The cost of the building of St. Stephen's Church, Redditch, has been 7,016*l.* 16s. 2d. including commission to the architect and salary to the clerk of the works. The entire outlay has been 7,462*l.* 7s. 5d. The great east window is a county memorial to the late Hon. R. H. Clive, who was a subscriber to the funds for building the church. The east window of the south aisle, "The Good Samaritan," is a memorial to the late Mr. William Bartleet and his wife, put up by their children. The south chancel window, "The Condemnation and Stoning of St. Stephen," is the gift of the present Hon. Robert Windsor Clive. The altar-cloth was presented by Lady Harriet Clive, and the font by Mrs. Mackarness.

Dorchester.—The ceremony of consecrating the Episcopal portion of the new cemetery for Dorchester, according to the *Dorset Chronicle*, took place on Thursday before last. The cemetery is enclosed with a brick wall, 6 feet high, with piers, capped with Portland-stone, at intervals of about 20 feet. The designs for the chapels were furnished by Mr. G. Gregory, of Dorchester. The works have been carried out by Mr. Edward Mondey. The grounds are being laid out by Mr. Blandford, of Blandford, from the design of Mr. Page, of Southampton. The cemetery is entered by a pair of iron gates, on the south side of which is situated the lodge for the sexton. It is a cottage of one story, and built in a style similar to the chapels. The cost of the whole, when completed, will be about 3,860*l.* The expenses have been incurred in the following manner:—Purchase of land, including costs of conveyance, mortgage, &c. 1,235*l.*; building the chapels and lodge, 1,485*l.*; extras and fixtures for ditto, 45*l.*; building wall, 475*l.*; costs of laying out the ground, 130*l.*; cost of planting, 75*l.*; surveyor, 100*l.*; clerk's salary (two years), 100*l.*; expenses of consecration, 50*l.*; printing, advertising, seal, &c. 45*l.*; sundries, 120*l.*; total, 3,860*l.*

Bristol.—The new church erected in the City Jail by Mr. Gardner, the governor, was opened on Thursday in last week.

Swansea.—The new cemetery for Swansea is in progress. It is situated about one mile from the town, and will cover a space of about 16 acres, part of the estate of Danygraig. When completed, the cemetery will be divided and surrounded by a wall 9 feet high. About the centre of the ground will be erected the two chapels. That for the Established Church will be a Gothic ecclesiastical building, and the Dissenters' will be in the Norman style, both from designs furnished by Mr. Wm. Richards. In addition to the chapels, there will be erected a receiving-house, in plain Gothic, and a cottage, built in the Early English style. The entrance will be from the Port Tennant road through a portion of the private embowered walk which leads to Danygraig House.

Oldbury.—The vestry have resolved to purchase 10 acres of land for a burial ground, at Nine-fields, near Rood-end, for 2,500*l.* and also ground for approaches. They have not yet sanctioned the laying out of the ground or erection of necessary buildings.

Liverpool.—The foundation-stone of a new Presbyterian church was laid on Wednesday in last week, in Belvidere-road, Prince's-park, at the end of Whitfield-street. The edifice will be in the form of a parallelogram, 88 feet in length, by 45 feet in width, exclusive of a vestry on the north side, and a porch on the south side, united to a spirelet, rising to the height of about 90 feet, surmounted with a gilt cross. The church is arranged to accommodate 620 persons. The design, which is Gothic, was furnished by Messrs. Hay. The walls are all to be faced with Yorkshire stone, and the dressings of fine grained yellow stone from Mr. Wells's quarry, near Wrexham. The timber is all to be varnished, and the whole cost as contracted for amounts to 1,624*l.*

Rochdale.—The foundation-stone of a Gothic Unitarian chapel was laid in Blackwater-street, Rochdale, on Wednesday in last week. The chapel is to be 66 feet long, and 34 feet wide, and is expected to cost 2,000*l.* The architect is Mr. Henry Bowman, of Manchester.

Halifax.—The ceremony of consecrating the parochial burial-ground of All Souls', Haley-hill, Halifax, and laying the corner stone of a new church adjoining, dedicated by the name of All Souls, took place last week. The burial-ground, the land for which was given by Mr. E. Akroyd, and which has been laid out and arranged at his expense, is situated on the left-hand side of the old Bradford-road, from which it is separated by the Haley-hill Allotment-gardens. It contains nearly 3 acres of ground, and has been laid out by Mr. Mallinson, of the firm of Mallinson and Healey, architects, in parallelograms, with a broad terrace walk in the upper part of the ground, on which the chapel has been erected. This is a structure in the Early English style of architecture. The windows are filled in with stained glass, from the works of Mr. Hedgland, of London. The masonry was done by Messrs. Cordingly, of Ringby, and the wood work by Mr. Bedford. The site, which has been given by Mr. Akroyd, is situated on the right-hand side of the old Bradford-road, at Haley-hill, within view of the works of the founder. The designs for it have been prepared by Mr. Scott, and it will cost from 15,000*l.* to 20,000*l.* The designs are founded on the style of the latter quarter of the thirteenth century. The plan consists of a chancel, with side chapels, aisles, nave with aisles, and south transepts (not of the full height of the nave), a tower at the west end of the north aisle, and a south porch. The accommodation provided is for somewhat more than 800 persons. The extreme dimensions are about 130 feet in length by 80 feet in width. There is, besides the south porch, a large western doorway, which is treated in a manner unusual in English churches, though frequent in France, the doorway being made very lofty, and the tympanum being filled in with sculpture. The space surrounding the doorway is enriched by diaper work. The window over it is of five lights with simple tracery. The clerestory, internally, will form a continuous arcade, and will be encircled with shafts of polished marble, as will also some other of the internal parts. The tower will be about 106 feet high. If surmounted by a spire, the whole will be about 220 feet in height. The south porch is rough within and without, with stone. The side windows of the aisles and chancel, and those terminating the transepts, are respectively three, four, and five lights.

Cadeby.—The church of St. John the Evangelist, at Cadeby, near Doncaster, is now on the point of completion. It stands on the right of the road leading from Cadeby to Melton. The approach is by a gentle ascent from the highway. Mr. Scott is the architect. The style employed is the Early Decorated. The stone used is white limestone, and was found upon the estate. The roof, overlaid with green Westmoreland slate, surmounted by a bell turret, spans both the nave and aisles, and the monotony which might be anticipated from so large a surface, is broken by the intersections of the porch roof. The porch is of rich design, with a deeply-recessed arch standing out in bold relief from its green foil. The capitals of the doorway and side are carved. The nave arcade is supported by round columns. In the sculpture of the capitals the maple leaf predominates. The sculptor is Mr. Harmar. Some sculptures of angels playing upon musical instruments, which are introduced at the intersections of the mouldings of the arches, are the work of Mr. J. B. Philip, who is executing the sculpture at St. George's church, in this town. The chancel is lighted by a window of three lights, with circular head capped with trefoils, filled with tracery, the design of which is a copy of the old Norbury window, by Mr. Powell, of London. The west end is lighted by two windows of two lights each, surmounted by a circular window: they are filled with Powell's patent glass. Sir Joseph Copley, according to the local *Gazette*, intends fitting the east and west windows with stained glass. A stone font is placed near the porch. There are oak stalls in the body of the church, as also in the chancel, the latter having carved poppy-head ends. The floor of the chancel is laid with Minton & Co.'s encaustic tiles; and the floor of the nave is covered with the patent tiles from the manufactory of the same firm. The pulpit and reading-desk are of oak, from the designs of the architect, and have been executed by Mr. Webster, of Boston, as also are the chancel fittings and altar rail. The interior roof is entirely composed of oak rafters, stencilled between the timbers. Mr. Haden, of Trowbridge, has put down an apparatus, combining the hot-air and hot-water principles, for the heating of the church. Messrs. Mears, of London, have furnished the two bells in the turret: the weight of each is about 4 cwt. The dimensions of the interior are as follow:—The length of the nave 34 feet 7 inches, width 16 feet; length of the chancel, 23 feet; width of aisles, 8 feet; height of caps of piers, 12 feet; pitch of the roof, 31 feet. Messrs. Bradley and Boddy, of this town, have been engaged to lay out the church-yard according to the plan and design of Mr. S. Appleby, of Balby. The church is approached by a terrace of five steps. Sir Joseph Copley has had the family vault constructed outside the church, on the south side. The cost of the edifice will exceed 5,000*l.* a sum entirely given by Sir Joseph Copley.

PROVINCIAL NEWS.

Spalding.—Workmen employed in taking down old buildings in Double-street have discovered several blocks of stone richly carved; some with busts representing kings and queens. It is thought they were formerly part of the old abbey.

Wisbech.—The new bridge, the foundation-stone of which was laid on the 11th ult. will be 156 feet in length, 40 feet in width, and the sides 8 feet high. It will be balanced for opening on a pivot placed at one third its length, or at 52 feet from the land end, and 104 feet from the longer extremity. The shorter end will be provided with rollers, and will be weighted to about 120 tons, to maintain its equilibrium. The pivot will comprise a large piston, fitting water-tight into a cylinder, in which, when necessary to open the bridge, water will be pumped, so as slightly to raise the superincumbent mass, and enable it to be turned with ease. When the bridge is closed and at rest, the water may be let out, and it will repose on its usual bearings. Its cost will be about 13,000*l.* On 11th April, 1855, the foundation-stone of the old bridge was discovered, and it was conspicuously placed at the laying of the first stone of the new bridge.

Lynn.—The committee superintending the Boal-quay works have accepted the tender of the Kirkstall Forge Company, Leeds, for two steam cranes, at 900*l.* each, complete, and one ten-ton hand-crane, complete, at 390*l.* The

only other tenders were Messrs. Grissell, ten-ton crane complete, 646*l.*; or for one on their own models, 417*l.* 10s.; Butterly Iron Works, Derbyshire, ten-ton crane (exclusive of foundations), 400*l.*; five-ton ditto, 260*l.* Mr. Jos. Glynn, according to the *Norfolk Chronicle*, is the engineer consulted by the committee in this matter, and the works are to be in accordance with his designs.

Bedford.—The first stone of the new building for the Bedford Working-men's Institute was laid by the Duchess of Bedford, on Wednesday in last week. The site is in Harpur-street. Mr. Porter, of London, is the architect. The building will be of red brick, with stone facings; the style of architecture, Domestic Gothic. It will contain, on the ground-floor, reading-room, coffee-room, class-room, and apartments for the porter; and on the floor above a public room, the whole extent of the building, 46 feet by 30 feet.

Stratford-on-Avon.—The opening of the new Corn Exchange here took place on Wednesday before last. Mr. C. Lucy presided. The building was designed by Mr. E. Gibbs, of Stratford, architect. The contractor for its erection was Mr. E. Chesterman, of Stratford-on-Avon. In front is a plain façade of brick with stone dressings and five windows of plate-glass. There are two rooms on the ground-floor, and a large upper room, approached by a flight of iron stairs. The exchange, which is 80 feet long, and of proportionate width, is lighted by a glass roof, having glass externally, to preserve ventilation. The western end has a balcony for an orchestra, and the room is capable of holding 700 people. The entire cost of the building was 1,700*l.*

Dudley.—The tenders for the second set of designs for the new workhouse were to be delivered on the 1st May, and considered by the Board at their ordinary meeting, on Friday, the 2nd. Each builder, in this case, has been compelled to take out his own quantities, or employ his own surveyor. In the first case they were supplied by the surveyor appointed by the builders and architect, and it is not yet settled who is to pay for them, as the guardians refuse to know anything of it.

Willenhall.—A site for new gasworks has been agreed on by the company recently formed.

——The surveyor to the local Board of Health reported last week that during the past year 174 buildings of all descriptions had been sanctioned. Two of them were places of worship, namely, St. Ann's Chapel and the Roman Catholic Chapel: 164 were dwellings, and the remaining eight were outbuildings. Five only of the dwellings were of a superior class: 159 were cottages for working people. The estimated cost of the whole buildings was 25,000*l.*

Preston.—The foundation-stone of a new cotton factory was laid in Ribbleton-lane here, on Tuesday in last week. The new building will be 170 feet long by 74 feet wide, and four stories high; in addition to which there will be the usual warehouses, engine and boiler house, &c. The whole of the contracts for the erection of the buildings have been taken by Mr. Richard Aughton, of this town, builder.

Holmfirth.—The foundation-stone of five almshouses, in commemoration of the great flood of 1852, by the bursting of the Bilberry reservoir, and of the national feeling and charity displayed on the occasion, was laid on Monday in last week, by the Freemasons of the district. The almshouses are in the Gothic style of fourteenth century. They are situate on the slope of a hill, a little out of the town, on the road leading to New-mill.

Leeds.—A meeting of the trustees of the Leeds Grammar School and of the parents of scholars was held at the school on Monday before last, to consider the propriety of erecting a more commodious building than the present school in North-street. Resolutions favourable to the object in view were passed, and steps are to be forthwith taken to set on foot a public subscription, in aid of the proposed movement.

Shields.—A site near the Townhall has been chosen for the erection of a new Mechanics' Institute for North Shields.

Tynemouth.—The projected works, for the erection of the north pier and the extensive Admiralty changes, are making progress. The Government works are so far advanced as to show the alterations contemplated. From the land side of the castle, commencing at the Haven and continuing onward round its base towards the range of high rocks fronting the Short Sands, there will be dug a wide and deep moat, which is to be constantly supplied with water from the sea. From the sides of the moat, adjoining the castle, steep and extensive slopes will be run up to its walls; and, to complete the design, the castle itself will be entered by a draw-bridge. These changes, along with others, alleged to be necessary for putting the castle in a complete state of defence against a siege, are said to be in "the ancient and exploded style of defensive warfare."

Edinburgh.—Of late a large body of men have been engaged in forming the new road from Abbey-hill through the gardens to the front of Holyrood Palace. The road is to be continued, also, through the gardens to the south of the palace, entering the park near the foot of the Radical-road. The first portion of the road is expected to be completed before her Majesty's Commissioner to the ensuing General Assembly takes up his residence in the palace.

PROJECTED BUILDINGS IN THE METROPOLIS.

SEC. 143, LOCAL MANAGEMENT ACT.

THE houses in Tanner's-buildings, St. Luke's, Old-street, have gardens in front of them. On these gardens some buildings have been recently erected and completed, in opposition to the representations of the parish surveyor. The subject was on Tuesday last brought under consideration of the vestry, when it was resolved, "That certain buildings having been erected beyond the regular line of buildings in Tanner's-buildings, within the parish of St. Luke, without the consent in writing of the Metropolitan Board of Works, and contrary to the 143rd section of the Act 18 and 19 Vict. cap. 120, the surveyor is ordered and hereby authorized forthwith to demolish the same, and recover the expenses incurred from the owner of the premises."

EFFECT OF COLOUR UPON HEALTH.

THE Rev. Mr. Mitchell, in his report to the Committee of Council on Education, states as his opinion that the ill-health of pupil-teachers and mistresses of schools is caused by bad ventilation and small windows. I perfectly agree with Mr. Mitchell's observations so far as they go, but I believe there is another cause which assists powerfully in producing ill-health in schools, and induces to melancholy, which I believe has escaped Mr. Mitchell's observations, as well as every other writer on the subject. From several years' observations in rooms of various sizes, used as manufacturing rooms, and occupied by females for twelve hours per day, I found that the workers who occupied those rooms which had large windows with large panes of glass in the four sides of the room, so that the sun's rays penetrated through the room during the whole day, were much more healthy than the workers who occupied rooms lighted from one side only, or rooms lighted through very small panes of glass. I observed another very singular fact, viz. that the workers who occupied one room were very cheerful and healthy, while the occupiers of another similar room, who were employed on the same kind of work, were all inclined to melancholy, and complained of pains in the forehead and eyes and were often ill and unable to work. Upon examining the rooms in question, I found they were both equally well ventilated and lighted I could not discover anything about the drainage of the premises that could affect the one room more than the other; but I observed that the room occupied by the cheerful workers was wholly whitewashed, and the room occupied by the melancholy workers was coloured with *yellow ochre*. I had the yellow ochre all washed off, and the walls and ceiling whitewashed. The workers ever after felt more cheerful and healthy. After making this discovery, I extended my observations to a number of smaller rooms and garrets, and found, without exception, that the occupiers of the white rooms were much more healthy than the occupiers of the yellow or buff-coloured rooms, and wherever I succeeded in inducing the occupiers of the yellow rooms to change the colour for whitewash, I always found a corresponding improvement in the health and spirits of the occupiers. From these observations, I would respectfully drop a hint to the authorities of schools, asylums, and hospitals, to eschew yellow, buff, or anything approaching to yellow, as the ground colour of the interior of their buildings.

Things not generally appreciated about a house:—1. The benefit of thorough drainage and water supply. 2. The benefits of good heating and ventilation. 3. The benefits of proper colour. WILLIAM BURNS.

ECCLESIOLOGICAL SOCIETY.

THE anniversary meeting of this society was held on the 23rd instant, at the Architectural Museum, in Canon-row. The chair was taken by Mr. Beresford Hope, and the proceedings opened by the secretary, the Rev. B. Webb, reading an interesting report from the committee.

The report was unanimously adopted, after some conversation upon the importance of photography as a means of recording the original features of buildings, which might be obliterated by restoration or rebuilding, and some congratulatory remarks on the Lille competition, where, as we have already stated, the first two prizes for the proposed cathedral were won by English architects.

Mr. H. Clutton read a paper on the Sainte Chapelle of Paris, and similar chapels in France, compared with St. Stephen's Chapel at Westminster. Mr. M. D. Wyatt, visitor, delivered an address upon Christian sculpture, illustrated by a selection of the Arundel Society's casts of ivories. The speaker traced out the Byzantine, the Latin, and the Irish elements of the revival of mediæval sculpture, and showed the superiority of the Italian school, especially that of Pisa, over the works of England or France. He urged strongly the necessity for an extensive revival of this art in the decoration of our religious edifices, and expressed his confidence that the suspicions with which it was regarded would soon disappear, and then the best models would be found in Italy. This address gave rise to a conversation, in which the chairman, Mr. Scott, the Rev. B. Webb, Mr. Dickinson, the Rev. W. Scott, Sir Charles Anderson, and others took part. The causes of the present state of sculpture were discussed, and it was agreed that there was a wide opening for reform, and that it was the duty of all who felt an interest in the revival of religious art to encourage it.

Mr. Skidmore then read a paper upon the practicability of applying iron to the construction and decoration of religious buildings in a far bolder and more artistic manner than has yet been adopted, with reference to the designs for an iron church, recently mentioned in our pages. In course of an animated conversation afterwards, the impression that the expansion and contraction of iron would render its practical use in large buildings unadvisable was removed.

FIBRE GILDING.

A VERY interesting paper was read on 16th ult. at the Society of Arts, Adelphi, on "Thread and Fibre Gilding," by Mr. Francis Bennoch, the inventor of a new process, by which the more tedious and expensive processes of India and Europe are in a measure superseded.

Mr. Bennoch introduced his subject with a historical sketch of fibre plating, or the covering or entwining of threads of silk or cotton with gold or silver flattened threads; and a description of the processes by which, in India, an ingot of gold or silver is gradually lengthened out, by passing it through orifices of smaller and smaller diameter, till the bar assumes the form of a delicate thread, many miles it may be in length, and which is then laid over a rotating thread of silk or cotton, the whole work being done by hand, with the aid of the simplest possible machinery. He also described the more elaborate and rapid European processes, in imitation of the Indian, and pointed out the

difficulties in the way of still greater improvements and economizations of these processes; concluding the whole with an account of the new invention, by means of which threads are simply *gilded* with the ordinary gold-beater's leaf. This is done by winding the threads in close array, but single file, round rollers, after passing through a glutinous liquor, and then laying over the surface leaves of gold, which are then burnished, so that one side of each thread is completely gilded; and on reversing the side by winding the thread on a second cylinder, the process is just repeated, and the whole thread is then completely gilded. This may be done with copper-leaf, as well as with gold or silver, and the copper thread is said to be scarcely distinguishable from the golden, except, doubtless, in its liability more easily to tarnish. The threads thus gilded may then, of course, be woven into cloth of gold or silver, or into gold or silver lace, in the usual way. This ingenious new process is likely to open up an important trade with the Eastern nations, who delight in sumptuous apparel, and perhaps to induce a similar taste to some extent in the west,—at least amongst the female sex. As regards cost, the new thread of gold is, size for size, considerably dearer than the ordinary gold thread; but, as it measures a much greater length for the weight, it virtually becomes, for weaving purposes, very much cheaper. Mr. Bennoch anticipates a still greater improvement some of these days by help of electro-gilding.

THE GREAT DRAINAGE QUESTION.

IN reference to the remarks of "C. D." in a former number, on the above question, a correspondent sends us a copy of a letter which he addressed in August last to Mr. Richard Jebb, chairman of the late Commissioners of Sewers, embodying a plan which first suggested itself to him in the Christmas preceding:—

"The plan is to lay one or more plate-iron tubes in the bed of the river Thames, at or near the centre of the stream, to receive the contents of all the sewers on both sides of the river. These would be concentrated on as few points as might be found practicable, and connected with the main tube by iron pipes similar to those which have been laid down to near low-water mark just above Hungerford-bridge. An even bed for the tube would be prepared by deepening or filling in the bed of the river by dredging-machines, with the aid of diving-bells of large size. The tube would be constructed of iron-plates of the largest size that could be made and conveniently managed, joined together by flanges fastened by bolts with nuts and keys—except the bottom-plates, where the flanges would offer an obstruction to the passage of the sewage. The flanges of the top plates would be *within* the tube, to avoid the risk of their being caught by the anchors of vessels in the river. It would, perhaps, be advisable to fix a convex shape to the top and sides, to resist the pressure of the water from without.

A shelf or gangway for a man to pass along would project from each side of the tube within, for inspection or for any necessary repairs, and there might be thick glass plates at convenient distances to admit light. Access to the interior would be gained by perpendicular shafts at the bridges, and to project above high-water mark, forming small towers in the river below London-bridge."

* * * *

LONDON PROMENADES.*

UNDER this title it has been suggested that it is very desirable that the farther destruction of the few suburban roads remaining about the metropolis should be checked, and that they might be made useful for public exercise and enjoyment, like the Boulevards of Paris. This is a subject in which we have taken a strong interest, although we had become almost hopeless of anything effectual being done. The creation of a new Board of Metropolitan Management, however, and the fact that this Board has already refused leave to cover the ground in front of some houses in White Conduit-street and Chapel-street, establishes the invaluable principle for which we have so long contended, and leads us to hope that it will not be long ere something positively, as well as negatively, promotive of the views of Mr. Moore shall have been done. This gentleman, in the tract under notice, thus illustrates his ideas:—

"The line of road I take to illustrate my views reaches from Tottenham Court-road to the Angel at Islington, a distance of nearly two miles: it possesses the various features I have described—inferior shops, sheds, lumber-yards, tavern-yards (for they cannot be called gardens), and already a short portion has become a street, while the remaining gardens are fast disappearing. The width from house to house varies from 150 to 160 feet, of which the carriage-way occupies about 40 feet, and with the foot pavements, generally 58 feet, for the public roadways, leaving from 46 to 51 feet on each side for gardens; and, as the present road is found ample for the traffic, the gardens, shops, and yards could be purchased, planted with rows of trees, and thrown open to the public like the Parisian Boulevards; or, a better arrangement, as I think, the pavement could be placed next to the areas of the house, the carriage-way divided for the east and west traffic, which would render it less dangerous and more convenient for the public. By this plan, similar to that adopted in the squares, a belt of nearly two miles in length, and from 70 to 80 feet in width, only divided by the necessary crossings, would be formed, and could be planted with a centre avenue of trees of 30 feet wide, with two side avenues, making a healthy and cheerful promenade."

* London Promenades; or, Suggestions for Preserving and Improving the Suburban Roads. By J. B. Moore. Kenny, 414, Strand. 1856.

ST. LUKE'S TEMPORARY CHURCH, CAMDEN-ROAD, HOLLOWAY.

A TEMPORARY church has been erected in the Camden-road, near the City Prison, Holloway (under the sanction of the Board of Works) by a committee of the parishioners. The building is in form a rotunda, 84 feet in diameter and 50 feet high from the floor to the underside of the bell-turret. The floor rises from the centre, and the interior is fitted with pews to accommodate 1,000 persons. The roof is one span, composed of twenty-four principals, framed and braced together, covered in with boards felted on the outside, surmounted by a bell-turret containing a bell from the foundry of Messrs. Warner and Sons. The church is lighted by eight side windows and a circular skylight surrounding the bell-turret.

The organ has been erected by Messrs. Jones and Son, of West Brompton, and the church will be opened for public worship on Sunday, 4th May, with three services. The Rev. H. Hampton, M.A. from Liverpool, is the incumbent.

The building was constructed by Mr. John Blizard, of Cheltenham, contractor for wood buildings; has been erected in the short space of two months and two weeks; and will be paid for, we are told, by the pewrents only.

The above church has been erected as a precursor to a permanent church, to be built on ground adjoining, which has been given by Mr. Poynder, and contributions have been made to the amount of 1,800*l*. The committee entertain hopes that in a short time the inhabitants and donors to such objects will respond to their requirements, and enable them to proceed with the building by their donations.

THE ARCHITECT'S DAY OF REST.

NOTHING would seem farther apart from the distinct scientific objects and special purpose of the *Builder* than that its pages should be the medium of the agitation of such a question as the secularization of the Sabbath, which is a religious and not a scientific topic. I observe, therefore, with deep regret, that a correspondent, "J. M." in your last number, urges the encroachment upon that day, which has been emphatically called the working-man's "chartered right," *the day of rest*, as a panacea for the spare attendance of visitors at the exhibition of the bar-rack drawings, as they cannot otherwise be visited by those *employed every day and all day*. This defiance of public feelings had, I thought, been set at rest by the recent overwhelming majority of the House of Commons on the question; but in your columns it is sought thus insidiously to be revived. Would it not have been more becoming in "J. M." to suggest that the hours of exhibition might be extended to sunset or dusk, or earlier in the morning, if he prefer it? Surely his day of work, or that of others generally, is not so long as to absorb *every hour* of the afternoon. Why should he wish to impose upon the porters and attendants the irksome sacrifice of *their* day of rest for his benefit and gratification? May they not have one day to devote to their wives and children, and the sacred observances of the Sunday? If a man rises early on a week day, say at six, and when required, which will rarely be the case, be ready to work on till twelve, he will never find that the abnegation of work on a Sunday, or abstinence from other occupations than those of a religious or family nature, will make him lose any opportunity of instruction or pleasure on the other days; nay, he will, by such rest, be refreshed and strengthened for his employments during the week.

Let one exhibition be opened on the Sunday, and you must open all, and then let "J. M." consider how many porters, attendants, superintendents, and other numerous classes must give up their rest to gratify those who seek study or such pleasures on that day.

Can one day in seven be too much to rest the wearied mind, harassed by the cares and trials of the other six,—to raise the thoughts from earth to heaven, and lead man to study his own passions, temper, and thoughts, and enable him, by God's grace, to improve and prepare himself for a future state, the proper end and aim, after all, of every rational creature?

Let us not be shamed by the contrast of the earnest and faithful manner in which our Jewish brethren regard its sacredness, or we may have applied to us the spirit of Shylock's exclamation, and lead them to say—"See how these Christians love their Sabbath."

I hope that "J. M." will view in its proper light this friendly protest against his suggested desecration of a day, intended by Almighty wisdom, and set apart to render him and me wiser and better men.

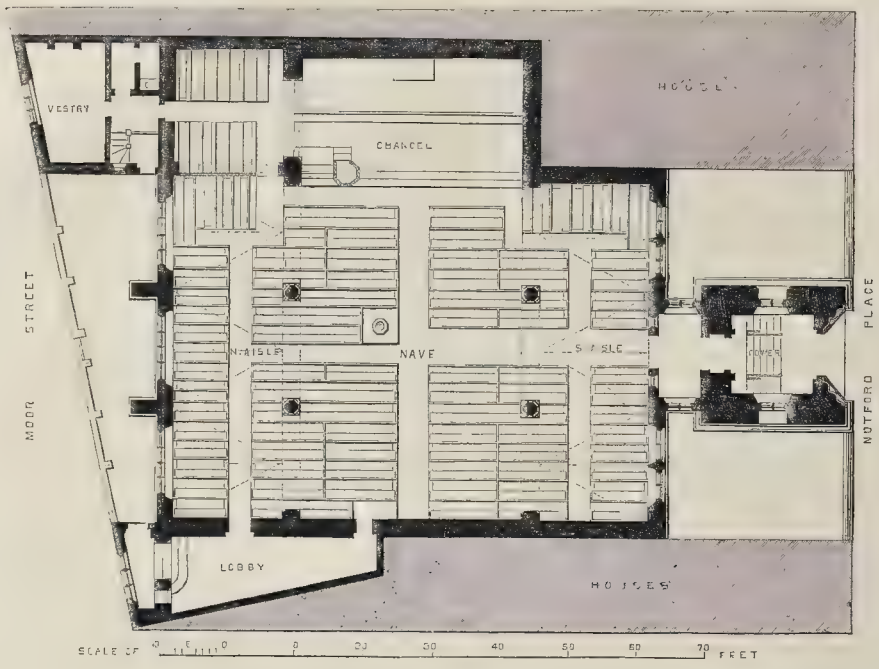
THOS. L. DONALDSON.

HOW TO MAKE LONDON HEALTHY AND CLEAN.

ONE of the provisions in the Metropolitan Local Management Act compels owners of house property to provide water to every house, not only for domestic but also for cleansing purposes, and unless some more efficient and cheap mode be adopted than by the present water supply, owners of house property will find the supply of water for cleansing purposes a very serious and expensive question.

It would appear, therefore, that one of the first works that the Board of Works has to do is to provide London with water not merely for drinking and cooking and other domestic purposes, because the present companies can, or ought to do that; but water for cleansing and watering the streets, and all those purposes for which the Act under which the Board is constituted, makes water supply necessary. The present water companies cannot accomplish this, because water carefully filtered and prepared for drinking is too costly to be used in large quantities for cleansing.

I therefore propose that pure sea water should be brought to London and used where necessary for cleansing purposes. And if the Board of Works have too much on hand to accomplish this, I will undertake to find responsible men who would construct a canal on the north side of the Thames by which pure sea water shall, at each tide, be received into reservoirs at a sufficient elevation above London to supply every house in the metropolis, and in such quantity that every street, court, and alley could be washed each day with it.



The parks might have lakes of sea water as well as fresh: the zoological gardens might have sea water for such of its inhabitants as require it: fountains of salt water might be placed, at pleasure, throughout the metropolis: the baths and washhouses could be supplied with it; and the celebrated Charing-cross fountains might then send forth pure and refreshing sea water, instead of hot water from the baths and washhouses, as at present; and, by pipes under the Thames, the south side of London might be supplied as well as the north.

The whole of this work can be accomplished, and paid for, by a rate of one penny in the pound on the property in the metropolis, and water direct from the sea may flow throughout London within eighteen months after Parliament shall pass an Act giving powers to a company to levy such a rate, and take the necessary lands under the usual powers.

Several parishes are at present in great difficulty to carry out the sanitary provisions of the Metropolitan Local Management Act for want of water supply. To carry out that Act, an almost unlimited supply of water must be had, and where can it be had better than from the sea? FRANCIS FULLER.

PROPOSED WIDENING OF STREETS.—The Board of Works for the Holborn district have agreed to memorialise the Metropolitan Board of Works in favour of the removal of Middle-row, Holborn, and the widening of Gray's-Inn-lane, the north end of Chancery-lane, and the south end of Leather-lane, leading into Holborn.

A STRIKE.—The ship-painters of Liverpool have been on strike since the 7th ult. claiming wages at 5*s.* instead of 4*s.* 4*d.* a day. Some of the masters have given the advance.

PLAN OF ST. LUKE'S CHURCH, NUTFORD-PLACE.

ST. LUKE'S CHURCH, NUTFORD-PLACE.

On the the Thanksgiving-day, Nov. 19, 1849, the Rev. John Hampden Gurney proposed, in his sermon, preached in St. Mary's Church, Marylebone, the erection of a seemly church as a thank-offering for the exemption from cholera, where, at the time fifty in a thousand was the rate of mortality in some parishes, only two in a thousand suffered. "I should deceive you," he said, "if I led you to think that less than 10,000*l.* will build such a sanctuary as ought to be built here. I should not please you, I am sure, if I proposed to cheapen and vulgarize so good a work. We have no building in the district, at present, consecrated to God's service, which is not a discredit to the taste of English churchmen; and without valuing external decorations and seemly architecture too highly,—acknowledging that the humblest loft and poorest barn are most precious in God's sight when there are living spiritual worshippers within who shall sing their song of praise in coming centuries with the angelic host,—we do say that, for our own comfort and the credit of our neighbourhood, we desire to see a temple amongst us which shall be something better than an unsightly pile of brick." He would like to call it, too, after "Luke, the beloved Physician," to proclaim the fact that it was the "St. Mary's thank-offering for God's great mercy in sparing us during a time of pestilence." A large sum of money was raised nobly; one anonymous friend giving his 1,000*l.* and another his 2,000*l.* Mr. Ewan Christian was appointed architect: the church was built; and, on the 3rd of July in last year, consecrated. It was intended chiefly for working men, by crowds of whom, we are glad to hear, it is constantly attended. The site is a peculiar one, as the plan will show, hemmed in both at the east and west ends by buildings, and bounded by Nutford-place on the south, and Moore-street on the north. The whole of the site is 6 feet below Nutford-place, but level with Moore-street; hence the reason for placing the floor half-way between each level, saving cost and giving fair play to the population on each side. Light is obtained from three large windows on the north side; and the freedom from glare, attained thereby, is remarkably pleasant. As there is a gallery on the south side, there are two tiers of windows,—one above, the other below.

The clear width of the church, nave, and aisles, is 70 feet, and the greatest length, including the chancel, 66 feet. The walls are of ragstone and hassock, with ragstone quoins; the windows and other dressings, and the internal masonry, of Bath stone. The internal fittings are of stained deal. Mr. Myers was the builder; Mr. J. Henry Christian, the clerk of the works. The ornamental writing was done by James West.

The following are the details of the cost of the church:—

Site*	£6,028	0	0
Building, including everything except writing	6,472	19	0
Ornamental writing	80	0	0
Heating and gas-fitting	183	16	0
Organ	250	0	0
Bells	400	0	0
Clock	178	0	0
Legal expenses and printing	190	0	0
Total	£13,782	15	0

"We were resolved from the first," says Mr. Gurney, "that we would have nothing mean or shabby in our Memorial Church; and we were equally determined not to sacrifice *utility* in the large sense of the term,—that is, convenient seeing and hearing for the whole congregation,—to other men's fancies and conventionalisms."

Both intentions appear to have been satisfactorily carried out.

* Lord Portman gave his reversionary interest in the freehold, but there were intermediate parties to be satisfied.

ST. JAMES'S CANAL AND SERPENTINE FERRIES.

Sir,—I'm an old tar, and have been captain of the fore-top; but having left a leg in Sebastopol, a little easy duty would come very handy, if a few coppers might be thereby added to my pension.

There is an old seaman (called the "Commodore"—I b'lieve it's brevet rank,) who plies across St. James's pond: he gives satisfaction, and is content with the profits of his crossing—which would be frequented by *ten times* the numbers now using it, if there were a direct path across the Park, with *a gate in Birdcage Walk*, opposite Marlbro' House.

Since there's no public desire shown for a bridge (and what Briton would go by land when he could travel, in the natural way, by water?), would it not be a handsome way of pensioning off three others of my messmates, to appoint a pair of wherries at each station?

In the long range of the Serpentine, a ferry just opposite the Receiving-house, would be yet more frequented. How many youths and maidens would cross the water, just to get accustomed to sea-sickness, and to learn naval tactics?—rowing in particular! Having each of us a pair of arms, we could manage the sculls with one leg: and, in these times of peace and steam-tugs, I don't see how else the national character is to be kept afloat.

The particular ferries I mention are much required for convenience in traversing the Parks, not to speak of the moral training in seamanship during rough weather, when we might teach youngsters how Britannia rules the waves!

Should the Ranger not object to the appointment of a Commodore aboard of a gunboat on the inland waters of the royal domains, we might have a pennon afloat there, and on occasions of public festivals save the twenty-one pateraras at the Admiralty all the trouble of a *feu de joie*, which we could blaze away in the true style, and upon the proper element.

"Will Capstan."

Leaving Work without Notice.—A painter, named Madden, was lately summoned before the Edinburgh Justices, at the instance of his master, for leaving his service without notice, and found liable, by the presiding Justices, in 5*l.* damages.

ST. LUKE'S CHURCH, NUTFORD-PLACE, EDGEWARE-ROAD.—Mr. Ewan Christian, Architect.

SHAKSPEARE'S "WINTER'S TALE," AT THE PRINCESS'S THEATRE.

THE choice of the "Winter's Tale" as the subject for his annual revival at the Princess's Theatre by Mr. C. Kean, was happily made; as the strong contrast in style between the architecture of Henry VIII. and the severe but not less picturesque styles of the countries and period to which the touching story of the sorrows of Leontes and Hermione is referred, is well calculated to increase the public zest for scenic propriety, so strongly evinced in the former and preceding revivals, as also to illustrate the respective capacity for scenic and costumic effect of the classic and mediæval eras.

The chronological contradictions abounding in the play rendered it impossible to combine period and decoration with anything like truth or satisfaction; therefore, to solve the difficulty, that epoch has been chosen to which the main incident upon which the story turns can with most justice be assigned, namely, the period when the Oracle of Delphi was in the zenith of its fame.

At that period, Syracuse had attained a degree of magnificence rivalling that of Athens itself. A few words will recall the rapid progress of the Greek colonies in the island of Sicily. In 729 B.C. the Dorian state of Corinth founded Syracuse, which soon became, and long continued, the capital of Sicily, extending its dominions gradually over all the south coasts of the island. In 671 B.C. the Messenians, driven from the Peloponnesus by the Spartans, besieged Zancle on the straits of Rhegium, took it, and established a permanent settlement there, changing its name to Messene,—a name which may still be recognized after a lapse of twenty-five centuries. The Rhodians of Doric race built Gela, and Gela founded Agrigentum,—soon the second city in the island. Ionian colonies from Eubœa built Naxus, Catana, and Egesta, but never rivalled the fame of the Dorians in that island.

The invasion of Syracuse by the Carthaginians, their signal defeat by Gelon, with the slaughter of 150,000 of their troops, are not amongst the least of their exploits. The remnant, made captives, were employed in beautifying Syracuse and Agrigentum, producing those monuments of art which, in the time of Cicero, were held to rank amongst the treasures of antiquity. This period of refinement in art, and eminence in wealth and power, has been happily chosen by Mr. Kean for the display of a perfection in scenic art, and gorgeousness of costume, which far surpasses even his former efforts; and honoured by the presence of royalty on the first night, and the enthusiastic plaudits of an audience which filled every available part of the theatre, he must have felt that his enterprise, skill, and outlay, were properly appreciated.

For Bohemia, the country wherein a portion of the story alternates, but which presents no kind of historical connection with Greece, nor any architectural interest at the period embraced,—a substitute has been found in Bithynia, a name metrically parallel, and a province of Asia Minor, affording in its Phrygian pastoral costume another opportunity for effect, by its contrast with that of the polished inhabitants of the Greek city.

The scholar will recollect that Bithynia was the scene of a portion of the sufferings of Xenophon and the remains of the Greek contingent, in their retreat from Babylonia, after the defeat of the expedition of Cyrus against Artaxerxes.

For the architectural portion of this revival, Mr. Kean acknowledges the services of Mr. Godwin; a reason why the writer of this notice usurps a post not properly his own. To George Scharf, Esq. F.S.A. Mr. Kean gives his acknowledgments for the greatest possible assistance in important suggestions of details. The vegetation peculiar to Bithynia is from his drawings taken on the spot. His acknowledgments as regards the music are given to James A. Davies, Esq. Lecturer upon Ancient Music.

In the getting up of this play the utmost nicety of detail has been observed, whether of architecture or of costume; every group has its authority, every posture its type. Not a movement, not a step, but the student of the classic will recognise its propriety, yet the severe lines of Greek art seem picturesque to a degree, so well are they balanced; from the well-known outline of the temple to the contour of the drinking cup, all is correct. And the very ornament on the border of the waiting-woman's dress resolves itself into a fret or a scroll.

The first scene includes a restoration of the Temple of Minerva, at Syracuse (restored), painted by Telbin. The fine proportions of the peripteral temple are most effectively shown, standing, as it does, on the highest portion of the island. The roof of the Temple of Diana appears beyond, and part of that of Juno Olympia to the extreme right.

Scene 2 is the banqueting-room in the palace, a vast apartment of admirable design. Upon a raised dais recline upon *triclinia* the two kings, the queen, and attendants. Statues of females, called *Canephoræ*, standing upon stylobata, support a broken entablature, which surrounds the room and supports a coffered ceiling. These Canephoræ are so called from the *κανεον*, or *canistrum*, which they carry on their heads. In this *canistrum*, or circular basket, the sacrificial cake, chaplet, knife, and frankincense were deposited at a sacrifice, and carried on the head of a virgin, more especially at Athens.

> "Illa forte die castæ de more puellæ,
> Vertice supposito festas in Palladis arces,
> Pura coronatis portabant sacra canistris."

In the Panathenaia, the Dionysia and other public festivals, two virgins of the first Athenian families were appointed to the office.

The interiors throughout the piece are delicately polychromatized: mouldings, coffers, soffits, triglyphs, and capitals are picked out with discretion, and the plain portions of wall hung with tapestry. Upon the triclinia (*τρεις κλινη*,), or couches for three, in attitudes of studied art, recline or sit the royal party: their dresses are admirable studies of Greek costume, and of costly material; chaplets encircle their heads. The dress of *Polixenes* is of more Eastern character, but less effeminate. The gradation of rank of lords, ladies, and attendants is nicely defined.

In the heroic ages the Greeks sat. Homer mentions three kinds of seat the *ἑιφρος*, for two; the *θρονος*, on which they sat upright with the feet on a stool; and the *κλισμος*, on which they lay back at an angle. For their mode of reclining, see Potter. Recumbent figures in the antique, are considered to be *εταίραι*, or courtesans, as modest women only sat.

In this scene occurs the Pyrrhic dance, a warlike dance of youthful warriors armed with buckler and sword, who execute a kind of mimic fight, giving and receiving blows with rhythmical precision, and emitting from their shields a martial accompaniment to the music of their flutes,—a general name with the Greeks for all wind instruments of one tube only, of whatever material composed. According to Hase, the Pythian flutes more resembled our trumpets.

This dance at the Princess's Theatre is really a masterpiece of art. The combinations are admirable, and the wedge form amongst others assumed by them gives an imposing notion of the force of the Greek phalanx under such a disposition.

In Act 2 we have the Court of the Gynæconitis, or women's apartments. This scene, drawn in angular perspective, and capitally painted, discloses an open quadrangle or court, surrounded on three sides by porticos, but closed on the fourth. In the men's quarters, the portico continued round all four sides. Homer's descriptions of the Greek house are too scant to be of much service, our first precise information dating about the period of the Peloponnesian war. The two grand divisions were the *ανδρονιτις* for men, and the *γυναικωνιτις* for women. The description of Vitruvius is doubtless substantially correct.

The next scene shows one of the Latomiæ of Syracuse, and is interesting as being formed upon the same principle as the cavern still existing, supposed to have been used by the tyrant Dionysius for the purpose of concentrating sound upon one point as a tympanum for detective purposes, and thence called his "ear." The serpentine form of the passage is well expressed.

In the scene, entitled a "Room in the Palace," a distant prospect of great topographical interest is displayed. The tapestries in the chamber display mythological designs from vases discovered in the south of Italy.

Act 3, is entirely devoted to the trial enacted in the theatre of Syracuse. The effect of a vast semicircle containing a countless multitude of spectators, growing fainter in distance as they recede, still rising in height as they approach the external wall, which finishes against the clear blue sky in an open colonnade, is a happy effort. The work of Professor Donaldson, on the "Theatre of the Greeks," supplies a mine of information on the subject to those who will seek it there.

It is in this scene that the answer of the Delphic oracle to the jealous Leontes, is declared with all the circumstance of pomp its reputation at that period called forth. The guardian deity of the Doric race was Apollo, and the most celebrated of his oracles, that of Delphi. A cleft in Mount Parnassus was the seat of the oracle. Its responses were delivered by a woman called Pythia (from *πυθεσθαι*, to consult), who, after having washed her body, and especially her hair, in the fountain Castalis, seated herself on a sacred tripod, on which was a lid of a circular figure, and thence delivered her answers. The first temple constructed over this chasm was destroyed by fire; the second, whose front was of Parian marble, was raised by the Alcmœonidæ, an Athenian family. In the innermost sanctuary (the *αὐτον*), was the statue of the Deity; before it the altar, with eternal fire fed from fir-wood. The Pythia, or *προφητις*, was always a native of Delphi, and when once in the service of the oracle, never left it. For ages the answers were delivered in Greek hexameters. At first one Pythia sufficed, then two; and a third was added in case of necessity. But in the time of Plutarch, the oracle had lost so much of its importance, that one Pythia sufficed.

In the theatre scene, the ark or chest in which the answer of the oracle is conveyed from Delphi, is derived from an Egyptian example, and a Pompeian painting. The panels are ornamented with devices from some newly discovered coins of Delphi, and the inscriptions are the recorded sayings of the seven wise men of Greece.

In Act 4 occurs the allegory by which Shakspeare thought it necessary to explain the jump of sixteen years in his history. Modern authors are not so conscientious. Luna, in her car, accompanied by the stars personified, sinks before the approach of Phœbus. Chronus or Time, surmounting the globe, describes the events of the sixteen years supposed to have elapsed. Phœbus ascends in the Chariot of the Sun. The apotheosis of Marguerite in "Faust, and the dream of Queen Catherine in "Henry the Eighth," are totally eclipsed by the splendour and perfection of this marvellous production of artistic skill and mechanical contrivance.

The *locale* is now changed to Bithynia. A clever interior, in somewhat of a Persepolitan style, introduces one to Asia Minor. Square columns with bold capitals, formed of pairs of animals and other features denoting Assyrian type, tell their own tale and invite attention.

After this follows a pastoral scene of great beauty, affording a distant view of the city of Nicæa, on the Lake Ascania. Nothing can be conceived more rural. The Phrygian dresses of Florizel and Perdita, as shepherd and shepherdess,—the sheep adorned with ribands, and adding the "drowsy tinklings" of their bells to the distant music of the pipe, the invariable Hermes crowned with flowers, without whose presence no pastoral scene could be complete, the green sward decked with flowers, and the sky above bright and blue as Phrygian sky should ever be, and, beyond all, the beautiful and extended prospect of the distant lake and city, form a tableau not easily rivalled. This peaceful scene is, however, soon disturbed by the entrance of a crowd of villagers, shepherds, rustics, of every description of character and costume, preceded by twelve men clad as satyrs, when one of the most wonderful dances is performed by a crowd numbering over 200 that probably ever was attempted upon any stage.

The festivals of Bacchus or Dionysus—called Bacchanalia or Dionysia,—were characterised by the most boisterous mirth, drunkenness, and noise. Virgins bearing poles surmounted by the *φαλλος*, called thence *φαλλοφοροι*, crowned with ivy; then followed the *ιθυφαλλοι*, wearing gloves of flowers; after them the *λικνοφεροι*, who carried the *λικνον*, or musical van, whence the god was also called *λικνιτης*; and every variety of dress and movement contributed to these indescribable orgies.

Some put on the skins of fawns, others carried thyrsi, drums, fifes, and flutes, &c. shouting "Evoe Bacche! Io Bacche! Evoe!"

Act 5th restores us to Sicily. The first scene represents the garden of the palace of Leontes, and is adapted from a drawing found at Herculaneum.

It is singular that Syracuse was the only place where the papyrus was indigenous, whence its representation becomes a point of interest.

The tombs of Syracuse restored form a scene of great beauty. The hour is sunset, and the effect is remarkably good. The excavations in the rock between the ancient theatre and the heights of Epipolæ are selected for this restoration: small porticos adorn the entrances. The inscription "ΤΑΦΟΣ ΒΑΣΙΛΙΚΟΣ," attests the rank of the occupants of one of them. The inscribed stile, and the column entwined with rich fillets, mark the honours of the wealthy: small plots of flowers, and stakes tied with ribands, indicate the graves of the lowly.

The last scene of the play is described as "the Peristyle of Paulina's house, with part of the sculpture gallery." A spacious quadrangle surrounded by a Doric colonade, faces the stage in parallel perspective. In the centre stands a mausoleum of elegant design. The touching incident of the unveiling the supposed statue of Hermione to the heart-broken Leontes, here takes place; the solemn procession by torch-light, the crowd of courtiers hushed to silence, and the light thrown upon the figure of Hermione alone, make a fitting finish to the series of tableaux of which this representation may be truly said to consist.

For Mr. and Mrs. Kean, it will suffice to say that they sustained admirably their long-tried reputation. Without the additional attractions conferred by lavish expenditure with taste and judgment, the result of which has been described, their acting alone would suffice to secure a run for the revival. An analysis of the costumes would scarcely be within

our province; but they well deserve a patient investigation, being taken from the best available authorities. Hope's Costume of the Ancients supplied many costumes, but in every instance the original sources whence they were derived have been referred to. The vast number of painted vases yearly exhumed in Italy, supply much information.

In the production of the scenery, Mr. Grieve has outdone himself, and due praise must be given to Mr. Lloyd, Mr. Gordon, and his other assistants.

A. F. Ashton.

LONDON LOCALITIES IN THE SEVENTEENTH CENTURY.

RED LION FIELDS.—LAMB'S CONDUIT FIELDS.

We are indebted to Mr. Robert Lemon, of the Record Office, for some extracts from minutes of Privy Council, which serve to illustrate the growth of London:—

25th *July*, 1683.—"Upon reading this day at the Board, the humble petition of Emanuel Gomez and William Shepheard, praying liberty to make shew of the Royall Sport of Bull-hunting, on horseback, after the Spanish and Portugall manner, in Lamb's Conduit fields, according to the Lycence formerly granted them, by his Majesty, which they, in obedience to his Maties Commands signifyed unto them by the Right Honble the Earle of Craven, forbore to putt in execution till his Maties further plensure to them in that behalfe: His Majesty was pleased to order, that free Liberty and Lycence be, and it is hereby given to the sayd Emanuel Gomez, and William Shepheard, to show their sayd sport of Bull-Hunting, on Horsebacke in Lamb's Conduit fields as aforesayd, when and as often as they shall think fitt, pursuant to his Maties sayd Lycence; Notwithstanding any Orders or Comands from his Ma^ty to ye coutrary; whereof all persons are to take notice, and permit the same accordingly."

Again:—

24th *July*, 1684.—"His Majesties Justices of the Peace, for the County of Middlesex, having this day represented to his Ma^ty in Councill, That the Grand Jury at the last Generall Quarter Sessions, held for the sayd County, Did present their sence of many great inconveniences occasioned through the late increasse of Buildings in the said County, neer the City of London, and their apprehension of further inconveniences by reason of more buildings in the like manner intended and began; Desiring the Court humbly to represent the same unto his Ma^ty on the behalfe of the said County, and that they the said Justices are of the same opinion with the said Grand Jury of the Inconveniencey from the increase of Buildings and particularly from those lately begun by Dr Nicholas Barebone, in Red Lion fields, by the stopping of severall highways which have been there, time out of mind, and which will not only choake up the air upon Gray's Inn, and destroy the rents of the poor of St. Clements, lying upon that part of St. Andrews, Holbourne towards the fields, But very much annoy all the buildings in and about Bloomsbury, to the prejudice of divers persons of honour and Quality, as well as other his Ma^tys Subjects there Inhabiting, and to the Annoyance of his Maties Private highway through the fields, the said Dr Barebone having already made severall Lay Stalls there, of Garbage, and Offalls, from severall Marketts, sufficient to endanger the bringing of a Plague into the Neighbourood.—And the said Justices further informing his Ma^ty that the said Barebone did of late, and particularly upon the 11th day of June last, march about the fields in the head of two hundred men, shouting and hallowing within the hearing of Grays Inn, and waving their hatts as by way of Challenge to the Gentlemen of the Society to come out and encounter them, the said Barebone himself Exhorting them that they should not be discouraged for he would back them with a thousand the next morning. And whereas Andrew Lawrence Esqre Surveyor of his Ma^tys highwayes did likewise by his humble Petition this day read at the Board, represent to his Ma^ty that his Ma^ty and his Royall Predecessors time out of mind, have had a private way on the backside of Holbourne and Grays Inn, and soe through Finsbury fields to Kingsland, for his Ma^tys passage to New Market, which said way, with the Gates and Bridges are maintained at his Ma^tys charge, And that now the said Dr Barebone having taken Red Lion fields purposing to Build the same, hath browne downe the Bankes and filled up the Ditch, in severall places adjoyning the sayd way, and carryed through the Gates many loads of Bricks, Lime, and Sand, to the great damage of the way, and that he threatnes to breake downe the Gates, & to arrest the Gate keepers if they obstruct the same, And therefore the said Justices of the Peace & the said Mr Lawrence respectively praying that his Ma^ty would be pleased to interpose his Royall authority for the puting of a timely stop to the said Buildings in the consequence whereof soe many of his Ma^ts Loyall and Dutifull Subjects are concerned, and for the preservation of his Just and Ancient right in the aforesaid way;—Upon consideration whereof, It was ordered by his Ma^ty in Councill, That Sir Robert Sawyer, Knt. his Ma^tys Attorney Generall, doe consider of, and pursue the best & most effectuall meanes that may be used in Law, for preventing the said Buildings in the Red Lion fields, and for preserving his M^atys said private way on the backside of Holbourne and Grays Inn, as aforesaid, from being abused or encroached upon. And it was further Ordered that Mr Attorney Generall doe likewise prosecute the said Dr Nicholas Barebone and the rest of the Rioters, for the Riot committed by them on the 11th day of June last, above mentioned."

Dr. Barebone, however, brought actions against those who interfered with him, for we find under the following date:—

3rd *October*, 1684.—"Upon the humble Petition of Edward Guise, Esqre, one of his Ma^tys Justices of the Peace, for the County of Middlesex, this day read at the Board, Complayning that he hath lately had severall vexatious and malicious actions brought against him, and severall Constables (who acted by his Authority) at the suit of divers persons employed by Dr Barebones, and by his promotion, upon no other cause, then for the Petitioner's granting Warrants by directions of his Ma^tys Attorney Generall to suppresse the said Dr Barebone and his men from committing any insolencys in their late riotous meetings in Red Lion Fields, and to prevent them from annoying his Ma^tys Subjects, And therefore Praying, that the said Actions may be defended by Mr Burton at his Ma^tys charge: It was Ordered by his Ma^ty in Councill, That it be and it is hereby referred to the Rt. Hono^ble the Lords Commissioners of his Ma^tys Treasury, to give such Order for the Petitioners Indempnity in this matter, as their Lordships shall judge meet."

CELLAR DWELLINGS.

Many evils are increased by simple thoughtlessness. In the basements of some houses you may see the only window, not 3 feet wide or more than 9 inches above the footpath, covered up by an iron grating, placed in many cases not more than 6 or 7 inches from the front of the building.

Hundreds of people live below the surface of the London streets, in rooms to which such apertures afford the only means of light and ventilation. Small as is the limit here for light, that necessary of life, it is still further curtailed by bars of iron, as strong as, and more closely set than, to any cell in Newgate.

Some would refuse to believe how many are born and die in these underground dens, into which a ray of sunlight can scarcely struggle. Here and in the garrets is to be found the largest amount of poverty. In addition to the want of light and air, these places are in most instances intolerably damp. The back-kitchen is generally used by the numerous tenants in the house for washing, &c.: in many the cesspool-closet and dust-heap are placed; and in eight cases out of ten the contents of the closet are passed under these places in badly-formed drains, that allow the poisonous gases to spread around.

We have already directed attention to the condition of many of the underground cellars of London. Our readers will remember the letter of a gas-inspector, printed in our pages some time since, in which he described the extent of the dangerous accumulations he had met with in many hundred instances. A systematic and general clearing of the undercrofts of London would add considerably to the wholesomeness of parts of the metropolis.

INSTITUTION OF CIVIL ENGINEERS.

At the meeting held April 22nd, Mr. John Hawkshaw, vice-president, in the chair, the Paper read, was "On the Junction of the Atlantic and Pacific Oceans, and the Practicability of a Ship Canal, without Locks, by the Valley of the Atrato," by Mr. F. M. Kelley, U.S. (America.)

It was stated, that the consideration of this subject had become urgent, and the adoption of some definite plan indispensable, in consequence of the commercial activity which had resulted from the discovery of gold in California and in Australia, and the rapid development of trade throughout the whole of the Pacific.

The route more especially advocated in the Paper would commence on the Atlantic side, at the estuary of the Atrato. It was then proposed to follow the Truando for thirty-six miles, deepening and widening its channel, where required, to a point named Townsend Junction. Up to this point, the works required would be very simple, as the banks were principally levels, formed of sedimentary deposit, and the soil of the bed of the river was of the same character. From Townsend Junction, an open cut was contemplated for a distance of thirteen miles. It was then proposed to tunnel through the base of the ridge, a length of 3½ miles. A double tunnel was recommended, as the width (200 feet) would require a single arch of too great a height: the division into two arches would also have the advantage of precluding any possibility of collision. The height proposed (120 feet) would be sufficient to allow of the passage of the largest vessels, by merely lowering their top-masts. From the tunnel to the Pacific, a distance of eight miles, the canal would follow the valley of a small stream, and debouch into Kelley's Inlet.

A summary of the estimated cost of the canal, including the works of every kind throughout its whole length, with lighthouses, piers, depôts, &c.—as also the execution, medical, and commissary departments, was annexed to the Paper. The total, including all contingencies, was fixed at 145,407,042 dollars, or 30,000,000*l.* In constructing the canal of a width sufficient for the passage of one ship at a time, the estimate would be reduced nearly one-half.

COMPENSATION CASE.

ST. JOHN'S NATIONAL SCHOOLS, WALHAM-GREEN, AND CHELSEA WATER-WORKS COMPANY.

On the 15th instant, Mr. Under-Sheriff Burchell, and a common jury, sat at the Swan Inn, Walham-green, to assess the compensation due to the trustees of St. John's National Schools, for that the schools had been injuriously affected by works done by the Chelsea Water-Works Company, in pursuance of their Act.

Mr. Maclure, surveyor, on part of trustees, said that the road in front of the St. John's schools had been raised 16 inches above its original level by the company, in laying their large pipes for supplying London with water. The floor of the schools was formerly 4 inches above the road and footpath, but now the road was 12 inches above the schools. The effect had been to block up the doorways of the porches, which abutted on the footpath, and to render the schools damp and unwholesome. Alterations had been made by the company, with the view of remedying the inconvenience, but were wholly inefficacious. He considered that the schools were undoubtedly injuriously affected by raising the road. He saw no other mode of restoring the property to its original value, except by rebuilding the schools, or raising them in all parts to the same level relatively to the present road as they were to the former. He had made an estimate, and found, that to raise the buildings 16 inches, would cost 314*l.* and thought that the trustees would have to pay 25*l.* for rent of other premises while the works of restoration were being done. These two sums together made 339*l.* which was the amount the trustees claimed from the company.

Mr. Bean, surveyor to the Fulham District Board, concurred in the evidence of Mr. Maclure; and Mr. Burge, medical officer of health of the district, and Mr. H. P. Ree, M.R.C.S. considered that the schools had been rendered damp by raising the road, and that the health of the children must suffer therefrom.

For the company, Mr. Butt, Q.C. called Mr. Lee, surveyor to the company, who said that he considered the main building of the schools had not been in the

least affected by the works of the company. There was a space, or area, of 4 feet between the building and the footpath, and if there was proper drainage, there could be no damp. He admitted that the porches which abutted on the footpath were damp, but said that they might be pulled down and built elsewhere.

The jury, after a short deliberation, returned a verdict for the claimants with 200*l.* damages.

SPECULATIVE BUILDERS.

INSOLVENT DEBTORS' COURT.

A CASE came lately before Mr. Commissioner Phillips, in which a creditor opposed, as he stated, to expose before the public the system on which speculative builders worked. The case elicited facts showing that the insolvent had, with a little capital of about 160*l.* taken a plot of ground, and erected several houses, which cost him about 1,800*l.* and the owner of the land, who had advanced money to the insolvent on mortgage, had obtained possession of the property for his debt of 1,320*l.*

The complainant wished it to be known that it was a system by which tradesmen were deprived of their goods. The owner of property generally let a slice of ground to a poor man, and afterwards recovered the same, covered with houses, at a small sum. In this case the insolvent had been a journeyman carpenter, and the landlord had got all the work and materials of the creditors, leaving nothing for any one.

Creditor: I only want to expose the system. It is very much carried on.

Mr. Commissioner Phillips thought there was nothing to prevent the insolvent from naming a day for the final order. He had a capital when he began, and as to exposing the system, all he could say was, that if creditors supplied materials to men who took land on such terms, they had only to thank themselves. Let tradesmen make inquiries before they supplied goods, and then, if they were deceived, this Court would protect them. A day was named, with protection, for the final order.

Notices of Books.

VARIORUM.

THE last number of the *Journal of the British Archæological Association*, March 31st, contains, *inter alia*, a very valuable and interesting paper, by Sir Gardner Wilkinson, on an Etruscan tomb at Cervetri, the ancient Cære. It was a custom of the Etruscans to suspend against the walls various objects which had belonged to the deceased, or were provided by the family. In the tomb described and illustrated, *fac similes* of these objects are made in bas-relief on the wall; and, being painted, explain the appearance they presented in ancient times. The custom of painting their large tombs was general in Etruria. "As in all early styles, the primaries, blue, red, and yellow, predominate, together with black and white; the secondary colours being fewer and less dominant, and green being sparingly used in order to light up its companions, but not in masses, which are the sign of an artificial and perverted taste."——A fourth edition of "A Catechism of the Steam-engine, in its various Applications to Mines, Mills, Steam Navigation, Railways, and Agriculture; with Practical Instructions for the Manufacture and Management of Engines of every Class," by Mr. John Bourne, consulting engineer, has been issued by Messrs. Longman and Co. This edition of a very useful work for the student, the practical engineer, and the general reader, is greatly enlarged and improved, and is illustrated by eighty-nine wood engravings. It may be regarded as an introduction as well as a supplement to the quarto treatise by the same author, which we have also before favourably noticed.——In the April number of the *Edinburgh Review* (Longman), and in the March number of the *Quarterly* (Murray) are reviews of Mr. Ruskin's works, both of them objectory, and indeed too abusive; but it must be admitted that Mr. Ruskin, by his own outrageous abuse of modern painters, has himself called forth these reflexes of his own exaggerated criticism and undue severity. It would be well were critics to temper the biting acridity of their sarcasms with a little of the milk of human kindness; but we suppose the reviewers regarded Mr. Ruskin either as a poacher on their own rough manors, or as himself fair game to all comers in the slashing line. The quarterlies under notice contain some interesting and able articles; but perhaps the only one to which we need here specially allude is that, in the *Quarterly*, on the Great Eastern steamship, and titled, "The Triton and the Minnows." We some time since illustrated the dimensions of the leviathan in course of construction at Mr. Scott Russell's, by comparison with a London square. In much the same way, the reviewer endeavours to give an adequate idea of its huge dimensions. It is said that ten water-tight bulk-heads, 60 feet apart, divide the ship transversely: whilst two longitudinal iron walls, 36 feet apart, traverse 350 feet of her length. If we could take Mivart's Hotel, and drop it into one of these; take Farance's, and drop it into the second; take Morley's, at Charing-cross, and fit it into a third; and adjust the Great-Western Hotel, at Paddington, and the Great Northern, at King's-cross, into compartments four and five, we should get some faint idea of the accommodation to be afforded. Each compartment will be a distinct hotel, with its splendid saloons, upper and lower, of 60 feet in length, its bedrooms, its kitchen, and its bar. The "big ship" is destined, be it remembered, to carry 800 first-class, 2,000 second-class, and 1,200 third-class passengers; making a total of 4,000 guests, independent of the crew. The total length of the vessel will be 692 feet. To make the capacity of these figures better understood, it is remarked that neither Grosvenor nor Belgrave-square could take the Great Eastern in: Berkeley-square would barely admit her, and when rigged her mizen-boom would project some distance up Davies-street, whilst her bowsprit, if she had one, would hang a long way over the Marquis of Lansdowne's garden. She is the eighth of a mile in length, and consequently four turns up and down her deck will afford the passengers a walk of a mile. Her width is 83 feet, the width of Pall-mall. Across her paddle-boxes her breadth is 114 feet; and if she had to steam up Portland-place, she would scrape the houses on each side. This floating town will be propelled by three powers—paddle, screw, and sail. There is to be a gas manufactory on board, and the gas will be laid on to all parts of the ship, while at the mastbead will be fixed the electric light.——In "Observations on Hop Drying," by Mr. S. E. Rosser, C.E. (Richards, Great Queen-street), we have some professional advice as to the construction of hop-kilns, with an account of an improved stove and evaporator, to which old kilns can be adapted, little alteration, it is said, being necessary. The tract itself comprises an attempt to reduce the different modes of hop drying now in use to a general system, as well as a description of the new and economical apparatus alluded to.——Mr. J. B. Lawes, F.R.S. the well-known agricultural chemist and F.C.S. with Dr. J. H. Gilbert, F.C.S. have reprinted, from the *Journal of Agriculture*, a "Reply to Baron Liebig's Principles of Agricultural Chemistry" (Clowes, printer), in which the authors state as their final conclusion, that, "in a word, in the existing condition of British agriculture, a full production of the saleable cereal grains, with other exportable produce, is only attainable, whether by manures, fallow, or rotation, provided there be an accumulation of available nitrogen within the soil itself." It is very desirable, with reference to the sanitary question as to town sewage and its uses, that agricultural chemists should come to some common understanding on the subject of manures, and their applicabilities to soils. Liebig is a very great authority, but he was admittedly at one time wrong in his conclusions on agricultural subjects, and it is quite possible that others may share the truth even with him.——A copy of the "Catalogue of the Compositors' Library, 3, Raquet-court, Fleet-street," has been forwarded to us. From statistical information accompanying it, we are glad to notice that this library now numbers 2,500 volumes; that of these, H.R.H. the Prince Consort contributed 163 volumes of the works of the best English authors; and that many literary gentlemen and others are evincing an earnest interest in the success of this praiseworthy undertaking. The library was opened as a lending library on 10th September, 1855, and to 22nd March, 1856, the number of persons who borrowed books was 1,350, and the number of volumes in the hands of members at the latter date was 860, one volume only being allowed to each member at a time. A series of rules, we observe, have been printed by an arbitration committee for the settlement of disputes between the compositors of London and their employers, the object being to avoid referring trade disputes to courts of law. The compositors are thus setting a very commendable example in various ways to other classes of their industrial brethren, and we wish them all success in their endeavours.

Miscellanea.

MIDDLESEX REFORMATORY SCHOOLS.—The designs in competition having been sent in, as we are told, we have received two letters, pointing out asserted connections between some of the magistrates and one or more of the competitors. The committee would save themselves much animadversion by naming, say three professional men, to make the selection. We understand that forty-one designs have been received.

STATUES AND MONUMENTS.—A resident at Washington (U.S.), who is a native of Greenock, has contributed an inscribed block of Seneca freestone towards the monument to James Watt, projected at Greenock. ——The Nelson marble statue at Norwich has been removed from its former position in the Market-place, and set up in front of the Grammar School, within the railings of the Upper Close-square. It seems to be sadly in want of a proper pedestal, which might be had for 150*l.* or less. Mr. Milnes, the sculptor of the statue, is said to be satisfied with its change of position.——It is proposed to erect a monument to John Wesley at Epworth, his birthplace. Subscriptions have been opened and a design suggested, comprising a statue 7 feet 9 inches in height, on a square stone basement 9 feet in height, and covered by a Gothic floriated canopy 25 feet in height to the apex of the arch.——The *Liverpool Journal* states that Mr. Spence, of Rome, has been selected to prepare a statue of the late Archdeacon Brooks.——There is some probability that a statue to the great navigator Vasco da Gama, to Camoens, and to the discoverer of Brazil, Nuno Alves Cabral, will be erected in Lisbon.

THE TRAVELLING STAGE AND CRANE: PATENT REFUSED.—On a motion in Chancery for a month's further time to enrol the specification of Adamson's patent, for the construction of piers by travelling stage and crane, the judge decided that in a case such as this, where an invention had suggested itself by degrees in the progress of works at Hartlepool, worked day after day in the presence of hundreds or thousands of persons, and where no intention of making it the subject of a patent occurred to the mind of either of the contending persons, Mr. Adamson and Mr. Robinson, except as an after-thought, he could not grant protection under the Great Seal, and therefore dismissed the petition with costs.

GAS AT DONCASTER.—From evidence given before a Committee of the House of Commons, and particulars added by the local *Gazette*, it appears that in winter 100,000 cubic feet of gas were produced at the Doncaster Gas Works every 24 hours from thirty retorts; that in the summer months only nine retorts were kept at work; and that 14,000,000 feet at 4s. 2d., 4,329,000 at 2s. 6d., 2,000,000 for public lamps, in addition to a leakage of 2,500,000, were annually made; and the quantity of coal consumed was 3,100 tons, averaging, with freightage, 10s. per ton. The works have nine miles of piping, embracing an area of six miles. The *Gazette* complains of the immense difference in price between 2s. 6d. to large consumers and 4s. 2d. to small.

THE OLD WATER-COLOUR GALLERY.—The members of the old society make an excellent show this season. There are 300 works, nearly all excellent in their way; and the number of little tickets put up on the private view day showed how they were appreciated. Messrs. John Gilbert, John F. Lewis, Naftel, Carl Haag, W. Collingwood, F. W. Burton, T. M. Richardson, and Miss Gillies, call loudest for praise.

UMBRELLA RECEPTACLE FOR PUBLIC VEHICLES. —Mr. Tyerman's patent vehicle umbrella receptacle is a new arrangement whereby the discomfort of wet umbrellas in omnibuses, railway carriages, &c. may be obviated. The omnibus receptacle is fitted on the interior of the omnibus door, and is simple enough as well as convenient, and in view of the passengers, each of whom, nevertheless, would require to keep a sharp look-out against London thieves, whether "known to the police" or more private professionals. It is proposed, however, as an additional check, that a ticket be appended to each, and that the conductor give up the article ticketted only to the duplicate ticket-holder.

Builders' Plans.—At the Bridgewater County Court, on 21st ult. an action was brought by Mr. T. Hutchings, a builder, against the Rev. G. Branston, a Methodist minister, to recover 15*l.* for preparing plans and specifications for a chapel, vestry, school-room, and cottage, at Pawlett, to cost in all about 455*l.*—the chapel itself to cost 310*l.* odd. The plans and specifications were prepared in the beginning of 1854. There not being sufficient funds at the time, and, indeed, 200*l.* being considered to be the extent of what could be collected for the purpose, no use was made of the plans, &c. at that time; and afterwards the plaintiff was "excommunicated" by the defendant, who refused payment of the plaintiff's demand, on the ground that the committee and not he was liable if the plaintiff's demand was a just one, but that the plaintiff never expected to be paid for them till he was excommunicated, although he, doubtless, anticipated that the contract would be carried out by him as builder. After the plaintiff was excommunicated, another builder, Mr. Keitch, was employed to build the chapel, which he did for 175*l.* with the addition of a gallery and accommodation for 180 persons. Under these circumstances, the plaintiff raised the present action. Among the evidence led, was that of Mr. Knowles, a surveyor, who deposed that a fair cost for preparing the plans, &c. would be 11*l.* 5*s.* the usual charge being 2½ per cent. on the amount, and the plaintiff stated that he would be perfectly satisfied with this sum, although due for the chapel alone. The judge, after hearing the evidence, said the principal point lay in the contract entered into between the parties. On the one hand, it might be consistent that the plans and specifications were expected to be paid for; and on the other, that the plaintiff being a member of their body, they should invite him to inspect the ground for friendly purposes. The minister was not the person to go about and obtain orders—his position excluded him from that—and therefore it was not likely that he would pledge himself as the responsible party in the case. From the evidence, it appeared when the plans were refused there was nothing said by the plaintiff that he expected to be paid for them, and nothing whatever was heard of the present claim until very recently. If the plaintiff was unable to make out his case more satisfactorily, then there must, under the present circumstances, be a verdict for the defendant. Verdict accordingly.

Oxford Architectural Society.—At the first meeting of this society for the present term, held on the 23rd ult. Mr. Parker read an elementary lecture on the Mediæval Architecture of the north of France, and especially of Normandy. He observed that between the Roman Period and the eleventh century there were very few buildings of any importance. An attempt was made by Charlemagne to revive the art in his time, and of this Germigny is a curious example, drawings of which were shown. He then described the abbey church of Cerisy, which had a flat timber roof: it was built by the father of the Conqueror; then the two abbey churches at Caen, and several others in that neighbourhood, and several drawings of some bases at Caen, identical with some of those in the crypt of Worcester Cathedral; described the remarkable series of early vaulting in Caen and its neighbourhood, and briefly mentioned the churches of Paris of that period—then Sens and Soissons, Eu and Coutances, Amiens and Mont S. Michel—then Santa Chapelle and the churches of Rouen. He pointed out the chief differences between French and English Gothic, and entered a little into the question of priority of dates, considering that in some things one country was in advance a few years, and in other things the other country, but that there was seldom a difference of more than ten years on either side.

Baths and Washhouses for West London.—At a Court of Common Council on 24th ult. an attempt was made to induce the court to agree to the recommendation of the Coal, Corn, and Finance Committee, on a petition of the West London Union guardians, that baths and washhouses be erected on a portion of the west side of Farringdon Market. The proposal was negatived by a majority of fifteen.

Northampton Architectural Society. — A Committee Meeting of the Architectural Society of the Archdeaconry of Northampton, was held on 14th ult. when a letter was read from the Rev. G. Curtis, chaplain at Constantinople, asking the opinion of the committee as to the style they would recommend for the new church about to be erected at Pera. After a long discussion it was resolved, that a building in Anglican style, with a spire, to contrast with the domes and minarets around it, and in the Early Pointed style, with lancet windows, would be the most appropriate. It was resolved, on an invitation from the St. Alban's Architectural Society, to hold the spring meeting at St. Alban's, on 17th June, being St. Alban's day. After some other proceedings the meeting separated.

The New National Gallery at Old Brompton. —In reply to a question in the House of Commons last week, the Premier announced that the Government had definitively resolved to remove the national pictures from Charing Cross to Old Brompton, so soon as arrangements could be made. Plans and estimates would be called for, and when these and the best mode in which the ground could be prepared for the purpose were decided on, the subject would be brought under the consideration of the House.

Electro-telegraphic Progress.—A submarine line has been laid across the Humber, as part of a direct telegraphic communication between Hull and London, by way of Grimsby and Peterborough. The cable, which is nearly two miles in length, weighs fully four tons. A second cable for the purpose of a direct communication with Grimsby is contemplated, as well as similar direct wires to Manchester and other towns.——The 4 000 miles of telegraph in India already constructed have cost 200,000*l.* or 20 lacs of rupees. The monthly expenditure amounts to 25,000 rupees. The monthly receipts, official messages included, have just reached that figure. One-third of all the messages are sent by natives, who have a strange fancy for this method of communication. It is said to be a fact, absurd as it may seem, that they prefer it to the post as a depository of secrets.

Society of Arts' Examinations and Certificates.—The published schedule of the subjects of examination for candidates from Institutions associated with the Society of Arts presents a fair field for competitive trial, while securing sufficiency of qualification in candidates. The certificates are to be of three classes, the first of which are only to be awarded to a high degree of excellence. Besides writing and spelling, the subjects of examination are arithmetic and geometry, mechanics, chemistry, physiology, botany, agriculture, geography, English history, English literature, and composition, Roman history, Latin, French, German, drawing. A list of books on each subject is appended, but they are merely recommended as useful manuals, the examiners being prepared to recognise knowledge however obtained. Several prizes, founded by members of the Society of Arts, are announced for excellence in particular departments. Candidates who pass the examination with distinction, will be recommended to the Civil Service Commissioners for appointments in those branches of the Civil Service where intimation has been given that the certificates of the Society of Arts will be regarded as testimonials worthy of credit. Many mercantile firms and public establishments, as well as members of Parliament and men of eminence in various respects, a list of whose names has been published by the Society of Arts, have also expressed their readiness to promote the success of the plan of examination by favourably considering the applications of candidates for employment who have passed honourably through this ordeal.

School of Art, Durham.—The annual report shows that the Durham School of Art has now been in operation for three years, and that the classes have been regularly and numerously attended. An additional class for ladies, in the afternoon, has been formed, and the attendance at this class is rapidly improving. The total receipts from the fees at the central school have amounted to 120*l.* 1*s.*; showing an increase of 21*l.* 10*s.* 6*d.* compared with the previous year. The morning class is at present attended by 25 students, the afternoon class by 11, and the evening class by 43. The committee, however, feel it necessary to appeal to the inhabitants of Durham, to learn whether the School of Art shall be maintained in an efficient condition by their assistance and co-operation.

Steam-carriages on Common Roads.—Amongst the communications received in reply to "C. C. C.'s" query, one correspondent, under the signature of "High Pressure," says that the chief cause of the failure of these carriages was their weight,—Hancock's, one of the most successful, weighing about a ton per horse-power; but that since the weight of the locomotive has been reduced to less than 120 lbs. per horse-power, and that there is every probability that if now tried again, with the improvements resulting (in the railway locomotive) mainly from the former abortive experiments in common road steam-carriages, they would not only be successful as a mechanical problem, but would yield a large return for capital employed. Another correspondent, Mr. H. Gardner, refers "C. C. C." to the *Mechanic's Magazine*, about the year 1835, for a reply to his question. This correspondent also states that the endless railway-engine to which we alluded is "still on the cards," and may be seen at Messrs. Boydell & Co.'s works at Camden Town; but that it is only employed in agricultural operations at present, although it was successfully used in bringing up guns for the Naval Brigade at Sebastopol, and met with the approval of the commander-in-chief there, Sir William Codrington.

Proposed Memorial of '51.—I am very pleased to see the letter of a "Member of the Society of Arts" on the subject of the proposed memorial of the Great Exhibition of 1851. A member of the Society of Arts myself, and feeling a great interest in the proposal, I had subscribed a small sum, and have long wondered what had become of the large amount which I heard had been collected.—L.

Strike of the Carpenters and Joiners employed at the Surrey Gardens. On Thursday in last week, at dinner-time, the carpenters and joiners in the employment of Messrs. Scott and Cornwall, the contractors for building the music-hall and making alterations at the Surrey Gardens, struck for an addition of sixpence, requiring 5*s.* 6*d.* per day.

Coating Metallic Surfaces with Aluminium. —A correspondent "Veritas" states that the patent for this process, alluded to in our No. of 19th ult. was "still-born," and that the only patent now extant for making Aluminium, and for plating therewith in this country, belongs to other persons altogether.

Digging Machine. — Experiments were tried recently, in the Park of Neuilly, with a newly-invented machine, moved by steam-power, and mounted on four rollers, which serve as wheels. In the back part of the machine are placed nine powerful levers which rise and fall alternately, and send into the ground, to the depth of about 15 inches, a double row of pickaxes in the form of hoes. It is calculated that this machine will dig and turn over a surface of fifty yards in less than ten minutes, or two and a half acres of ground in about thirty hours, supposing that the machine does not get out of order. The engine is of eight-horse power. *Galignani.*

Foolscap.—Everybody says *Notes and Queries*) knows what "foolscap" paper is; but they would be puzzled to tell how it came to bear that singular cognomen. When Charles I. found his revenues short, he granted certain privileges, amounting to monopolies, and among these was the manufacture of paper, the exclusive right of which was sold to certain parties, who grew rich, and enriched the government at the expense of those who were obliged to use paper. At this time all English paper bore in water-marks the royal arms. The Parliament under Cromwell made jests of this law in every conceivable manner, and, among other indignities to the memory of Charles, it was ordered that the royal arms be removed from the paper, and the fool's cap and bells be substituted. These were also removed when the Rump Parliament was prorogued, but paper of the size of the Parliament's journals still bears the name of "foolscap."

The best Obstruction to Robbers.—An experienced burglar (a ticket-of-leave convict) has confessed that, for a street-door, a chain is a more perplexing obstruction than locks, bolts, or bars: both at windows and doors bells are a serious disturbance; but, worst of all, is a little yelping dog (being little, the easier hid under the bed or drawers), that does not attack intruders, but runs away barking. This should increase our affection for the dog, which is the only animal that leaves and forsakes his own kind voluntarily to follow man. It is true, and the truth should bind man to be the dog's protector and friend—and, let me add, "not to tax him so highly."—I.

Birkenhead Graving Docks and Ship-Building Yards.—There is a great quantity of building work going on at Birkenhead. The *Liverpool Journal* in an article on this subject gives the following list of the contracts entered into, and the value of work done in two years:—

Mr. Laird's original contract ...	£35,000	
,, workshops	7,000	
,, machinery and plant, say	15,000	
Value of Monk's Ferry land ...	10,000	
		£67,000
Messrs. Clayton and M'Keverigan's original estimate	£18,000	
,, workshops	4,000	
,, machinery and plant	9,000	
Value of adjoining premises.....	12,000	
		43,000
Messrs. Clover and Royle's original estimate	£18,000	
,, workshops	4,000	
,, machinery and plant	9,000	
		31,000
		£141,000
Corporation work next to Mr. Laird's.....	£8,000	
Railway company	3,000	
Mr. Price's executors	3,000	
Woodside commissioners.....	10,000	
		24,000
Amount of work done between Woodside and Birkenhead ferries, inclusive, in two years		£165,000

SALE OF HOUSE, LOMBARD-STREET. — On the 24th, Mr. T. S. Smith sold, at the Mart, the freehold business premises, 45, Lombard-street, let on lease which expires in about four years, for 110*l.* per annum. The house is in a bad condition. It sold for 3,470*l.* about 31½ years' purchase.

TENDERS

For new merchants' offices, Old Hall-street, Liverpool. Mr. J. K. Colling, architect. The quantities supplied by Mr. Edward Manfred and Mr. James Marsland :—

J. and W. Walker	£56,770	0	0
Kilpin and Montgomery	56,0 0	0	0
John Johnson	51,381	0	0
Jones and Jump	49,689	0	0
Haigh and Co.	49,299	0	0
J. H. Mullins	48,500	0	0
Jas. Burroughs	47,997	0	0
Holme and Nicoll (accepted)	46,285	0	0
John Ladd	45,800	0	0

For farm-buildings and bailiff's-house, at Coddington, Nottinghamshire. Mr. Baily, architect, Newark. The quantities supplied by Mr. C. Poland :—

Saunderson and Kendall, Market-Rasen	£2,065	0	0
Staniland, Newark	2,010	0	0
Stredder, London	2,000	0	0
Pretwell, Newark	1,989	0	0
Marshall and Henderson, Newark	1,912	0	0
Palmer, Lowdham	1,865	0	0

For farm-houses, Bow-road. Mr. C. Martin, architect :—

Cott	£3,600	0	0
Brown and Co.	3,497	0	0
Blackburn	3,360	0	0
T. Wood and Son, Hoxton	3,328	0	0
Watts	3,130	0	0
Hedges	3,095	0	0
M. A. Wood and Sons	3,055	0	0

For building two houses at Englefield-road, Islington, for Captain Sparrow. Mr. Knightley, architect :—

Sands and Emery	£1,215	0	0
Coleman	1,117	0	0
Nash	1,097	0	0
M. A. Wood and Sons	1,085	0	0
Battenbury	1,079	0	0
Walberton	988	0	0

For building, at Hastings, two cemetery chapels, with waiting and robing rooms attached, two lodges, receiving-house, front wall, and entrance-gates, &c. Mr. Henry Carpenter, of Hastings, architect :—

Pattendew, Hastings	£2,830	0	0
Burchell, ditto	2,714	0	0
Coussens, ditto	2,701	6	0
Philcox, Brighton	2,533	0	0
Smith, ditto	2,145	0	0

For additions and alterations to house at Clapham-common, for Mr. Thomas Hepburn. Mr. Joseph Gale, architect :—

Brown	£1,125	0	0

The Vestry do not bind themselves to accept any of the proposals. By order

CHARLES LAHEE, Vestry Clerk.

Offices, Manor House, King's-road, April 23rd, 1856.

TO BUILDERS.

LEE, near BLACKHEATH.—FRONTAGES TO BE LET, for detached or semi-detached villas, on the Belmont Estate. This private estate has been laid out for building purposes anywhere round London, and good villas are in great demand, on account of the situation being lofty, dry, well drained, and extremely healthy. Immediate possession will be afforded to responsible parties.—For particulars, apply to Messrs. J. and J. W. TODD, Milner-street, Brompton, London, or Belmont, Lee, Kent; or Messrs. NELSON and HINES, 6, Whitehall; and of Messrs KIRKMAN and ENGLEHEART, King William-street, City.

TO CAPITALISTS, BUILDERS, RAILWAY CARRIERS, AND OTHERS.

CITY of LONDON. — Valuable and extensive FREEHOLD PLOT of GROUND, in the OLD BAILEY, TO BE LET, on a building lease, land-tax redeemed. The ground, now the site of the New Inn, has a frontage to the Old Bailey, with access from Fleet-lane, and occupies an area of nearly 18,000 square feet, which may be increased, if required, to nearly 26,000 square feet. The premises are admirably adapted for an hotel and tavern, or for warehouses, chambers, or other buildings, on a large and comprehensive scale.—Plans of the property may be seen, and further particulars obtained, by application to the Counting-house of St. Thomas's Hospital, Southwark; or to Mr. HENRY CURREY, Architect, No. 4, Lancaster-place, Strand.

TO BUILDERS.—FREEHOLD BUILDING LAND TO BE LET on LEASE, for a Term of 999 Years, at Kew and Harrow, Stratford, Mitcham, Wimbledon, Chertsey, Ash, near Aldershott Camp, and Hertford Copyhold. Cash advanced, if required.—Apply to Messrs. BLAKE and KNOW, Solicitors, 22, College-hill, Cannon street, London.

TO BUILDERS AND CAPITALISTS.

GROUND TO BE LET for Building Purposes, near to Belle Vue Farm.—For particulars, apply Messrs. LOGIES and DEAN, Civil Engineers and Estate Agents, 21 & 24, St. Geo ge's-place, Hyde Park-corner.

HOLLOWAY. — Valuable BUILDING GROUND TO LET, with liberal cash advances, to respectable builders, admirably situated for good Villa Residences, which are much required in this favourite and highly respectable locality. The situation is most healthy, possesses beautiful and commanding views, and the means to all parts of London easy. Property in this neighbourhood lets and sells rapidly.—For further particulars, apply to Mr. GEO. CLARKSON, Surveyor and Land Agent, 48, Penton-street, Pentonville.

TO SURVEYORS, AUCTIONEERS, &c.—LAND to LET, very eligibly situated at Norwood, near the Palace, with roads and sewers already made. The owner is open to treat with a respectable surveyor who possesses the means, and likewise has a good letting connection with builders, &c.—Address, W. R 11, Upper Baker-street, Regent's-park.

BUILDING LAND, very eligible, roads and footpaths made and gravelled, centre of an old neighbourhood. Term, 100 years. Right to purchase freehold. Moderate ground-rent. Situation, High-road, Angel, Edmonton. Other Freehold Land, front of Tottenham-green, opposite Trinity Church. Also Land at Stoat's Nest Station, 2,000 feet frontage to high road, rear abutting on South Eastern and Brighton Railway, and near the junction with the new Caterham line. Moderate sized houses in great demand.—Applications to Mr. SCOTT, Clayhill, Enfield Middlesex

THE WOODBURY-PARK ESTATE, TUNBRIDGE-WELLS, West Kent, will be ALLOTTED at the Offices, No. 33, NORFOLK-STREET, Strand, London, on WEDNESDAY, MAY the 28th. On payment of one-eighth of the price of each lot, the remaining seven-eighths of the purchasemoney may be borrowed from the society, the loan to be repaid during the term of 10½ years, for every plot coming to be allotted. Plans of estates, price 6d. or 7d. by post, will be duly forwarded

BUILDING GROUND TO LET.—Several PLOTS of GROUND TO BE LET, in the best part of Kentish-town and Holloway. Money advanced if required.—Apply to Mr. TAYLOR, Surveyor 21, Islington-green.

ISLE OF DOGS.—TO BE LET on building leases, for a term of 99 years, direct from the freeholder, numerous PLOTS of LAND, at moderate ground rents, suitable for the erection of fourth-rate houses, which are in great demand owing to the immediate neighbourhood of manufacturing and other works, carried on upon the most extensive scale.—For plans of the estate and further particulars, apply to SAMUEL STRATTON, Esq. Solicitor, 37, Lincoln's-inn-fields; Mr. BLYTH, Surveyor, 113, Aldersgate-street; or Mr. RAMSAY, Estate Agent, High street, Poplar.

WOODCOTE ESTATE, CARSHALTON, SURREY.—To BUILDERS and OTHERS. To be LET for a term of 99 years, adjoining the Carshalton Station, on the London and Epsom Railway, several plots of BUILDING LAND, eligibly and delightfully situated close to the picturesque village of Carshalton The situation is most desirable, and commands extensive and varied scenery, and is peculiarly applicable for the erection of detached and semi-detached villas. Leases granted direct from the freeholder, and money advanced, if required. The Land is situated thirty minutes' journey from London-bridge. For terms and to see plans, apply at the offices of the Architects to the Estate, Messrs WEHNERT and ASHDOWN, 42, Charing-cross

MAITLAND-PARK, HAVERSTOCK-HILL, HAMPSTEAD-ROAD, land-tax redeemed.—TO BE LET, upon building leases, for ninety-nine years, desirable BUILDING SITES on the Estate. The continual demand for houses in this locality, and the picturesque position of the property, adjoining the grounds of the Orphan Working School, render this a desirable opportunity for gentlemen wishing to erect villas for themselves.—For plans and terms apply to the Secretary of the Orphan Working School, 39, Ludgate-hill. Messrs. TERRELL and CHAMBERLAIN, 30, Basinghall-street, the Architects, Messrs WEHNERT and ASHDOWN, 42, Charing-cross; or at the Lodge attached to the school.

BUILDING LAND at ACTON, near the Railway Station, in a fine open and healthy situation, and plenty of fine water.—Apply to W. F. LOW, Esq. 67, Wimpole-street, Cavendish-square.

TO BUILDERS and OTHERS. — TO BE LET, on building lease for eighty years, or the FREEHOLD TO BE SOLD, by Tender, the valuable and extensive PREMISES, No. 17, GREAT PRESCOTT-STREET, WHITECHAPEL, and any information required may be obtained on application to Messrs. SMITH and WILLIAMS, Architects, Prescott's place, Old Jewry, at whose Office the Tenders are to be delivered, sealed and endorsed, stating the exact outlay and use of premises, on or before MONDAY, 19th MAY next. The highest or any of the Tenders will not necessarily be accepted. If desired the house and premises adjoining, and being No. 15, in the occupation of Mr. Moses, may be included in the Tender.

CARCASSES and UNFINISHED HOUSES.—several excellent UNFINISHED BUILDINGS TO BE SOLD a bargain.—Apply to Messrs. ROBERTS and BULL, 16, Hol es-street, Cavendish-square

TO CARPENTERS AND BUILDERS.

FOR SALE, at a low price, several well-built SIX-ROOMED CARCASSES, near Victoria-park, in a rapidly-improving neighbourhood, where houses of this class are much required, and which let and sell rapidly. To respectable men, cash will be liberally advanced to assist in completing them. Terms, for years. Ground-rent moderate.—For further particulars apply to Mr. GEO. CLARKSON, Surveyor and Land Agent, 48, Penton-street, Pentonville.

THE CONSERVATIVE LAND SOCIETY.

Large sheds for making tiles and red-ware; dwelling-house, stables, &c. The whole in complete order, and now in operation.—For immediate sale, apply to Mr F. SCHULZ, Solicitor, 4, Dyer's-buildings, Holborn, London.

TO LEAD MERCHANTS, PLUMBERS, and GLASS CUTTERS.—To be DISPOSED OF, with immediate possession, the GOODWILL and Utensils of a well LEAD MERCHANT, PLUMBER, and GLASS CUTTER, desirably situate in one of the greatest thoroughfares in London, midway between the South Western and South Eastern railways, now doing an extensive town and country trade. The premises comprise three bedrooms, drawing-room, extensive shop and warehouse in the rear, with private entrance. Rent, 54 Coming in for goodwill and fixtures, the Subscribers feel sure will be given on application to F. INDERMAUR, Auctioneer, House agent, &c. 74, Union-street, Borough.

WESTMINSTER. — BUSINESS PREMISES, EARL STREET (near the Horse-ferry-road), TO BE LET, on lease, a LARGE YARD, 100 feet by 82 feet, with workshops, timber-stages, saw-pit &c. suitable for a builder, mason, or any manufacturing business. For further particulars apply to Messrs. EYE, SURVEYORS and HOUSE Auctioneers and Estate Agents, 40, Parliament-street, Westminster.

TO PAINTERS, PLUMBERS, and GLAZIERS.—FOR DISPOSAL, in the large manufacturing town of Trowbridge, in consequence of the death of the proprietor, an old-established and remunerative BUSINESS in the above line. To any enterprising person this is an opportunity rarely offering.—Apply to Mr. J. G. FOLEY, Auctioneer and Appraiser, Parade, Trowbridge.

TO SCULPTORS, STATUARIES, MARBLE MASONS, and OTHERS. — A good opportunity is offered to enter upon an OLD ESTABLISHMENT, as the proprietor wishes to retire, and will give every information. The Business has been carried on successfully for forty-four years. Apply to Mr. FLOWN, Foss-bridge, York.—N.B. A large number of marble chimney-pieces, tables, other work, and stock, offered for sale below trade prices. Also, either together or separately, a stone wharf, stock, shops, and premises.

TO PLUMBERS, PAINTERS, GLAZIERS, and GASFITTERS.—Persons having a small BUSINESS to DISPOSE OF in the above branches, will direct, post paid, to H. L. Office of "The Builder," stating full particulars. No house agent need apply.

TO GAS-FITTERS, BRASS FINISHERS, and OTHERS. — TO BE DISPOSED OF, an OLD-ESTABLISHED BUSINESS in the above Trade, a short distance from town. The good-will, fixtures, stock in-trade, &c. will require from 300l. to 400l. Satisfactory reasons for leaving will be explained.—For particulars, apply to Mr. T. T. Stephenson-terrace, Caledonian-road, Islington. No agent need apply.

TO BUILDERS, CONTRACTORS, AND OTHERS.

TO BE DISPOSED OF, a BUSINESS, carried on for some years with good success by the Advertisers, in and around a seaport town in the West of England. The premises, near the waterside and most convenient, may be rented or purchased.—For particulars, apply to Messrs. W. and T. MAY, Builders, Stoke, near Devonport.

TO LIME and CEMENT MANUFACTURERS.—TO BE LET or SOLD, with immediate possession, commodious and extensive WORKS, situated in one of the most flourishing and rapidly improving seaports in South Wales, contiguous to a railway, with a siding into the yard. These premises consist of a substantially-built factory, with steam-engine of 25-horse power, mill-stones, grinding-machinery, kilns, and in the most complete order; extensive yard, sheds, weighing-machine, and dwelling-house. Raw material of the finest quality in the immediate neighbourhood.—For further particulars, apply to J. W. J. LOW, Stationer, Aberhonddu-lane, London.

PATENT TERRA-COTTA. Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crosses, Label Mouldings, Friezes, Trusses, Vases, Balusters, Capitals and Bases of Columns, Pavings, Fine ng Bricks, Coping, Kitchen and other Sinks, Chimney Shafts and Tops, and numerous other Articles, manufactured by J. M. BLASHFIELD, in Patent impermeable Terra-Cotta, at Mill-wall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington basin.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other impure or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the article, either in consequence of impurity in the material primarily used or to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it more body weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. R. MOSLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES TAYLOR and CO. Wholesale Agents, 63, King William-street, City; and by the Manufacturing and Painting Agent, Mr. FREDK. BRABY, Fitzroy Works, Newington, Manchester, and Liverpool by R. CLAY, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. in Leith, by Messrs. R. ANDERSON and CO. Pinwherry; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21 and 28lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 13, Manchester-buildings, Westminster.

LATHS.—Full tale Baltic single LATHS, 30s. per load, cash, at H. ARUNDELL'S, Webber-street, Blackfriars road.

PAPER-HANGINGS. — JEFFREY, ALLEN, and CO. beg to inform the trade, they have a large selection of Paper-Hangings of their own manufacture, of all qualities, and at very low prices. They confidently invite attention to their best papers, which in price, style, and colouring, are equal to any that can be manufactured.—J. A. and CO. are the sole proprietors of the Gutta Percha Paper, an efficient remedy for damp walls. — Factory, 115, Whitechapel; Show-room, 500, Oxford-street.

BRIERE'S PARISIAN PAPERHANGINGS, SATIN, FLOCK, and GOLD DECORATIONS and BORDERS, 15, Alfred-terrace Queen's-road, Bayswater.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 22 GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

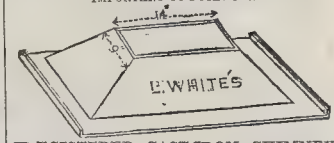
PAPER HANGINGS! PAPER HANGINGS!!—Builders, the Trade, Country Dealers, and others, will find an immense STOCK and endless variety of all classes of PAPER HANGINGS, at W. CROSBY'S MANUFACTORY, 23, Lowther Arcade, Charing-cross, London. Splendid new designs, both machine and block printing, not to be surpassed by any house in England. Patterns sent for approval in town or country. Cheapest house for panel decorations. Terms, Cash.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter from SIR JAMES MACDARMEY, BART., VENTNOR, I. of WIGHT.
"Second Testimonial."—"March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.
Driving dresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.
Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.
N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYND HANCOCK, Goswell-mews, Goswell-road, London.

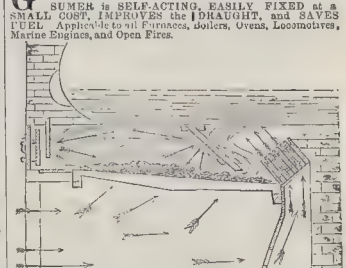
TO ENGINEERS, MACHINE MAKERS, AND OTHERS.
CHARLES MACINTOSH and CO. Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all degrees of elasticity, recommend this material as capable of sustaining the action of hot or cold water, steam, acids, and grease. It is used extensively for valves in marine and land engines, railway buffers and springs, washers for pipe-joints, hose and tubing; also for gas-holders, acid pumps, nickel cisterns, &c. &c. Articles, moulded or otherwise, made to any size or figure.—Address, 3, Cannon-street West, London; and Cambridge-street, Manchester.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability. Slabs and Tiles for Fireplaces and Hearths. Copings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had, in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.



PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 331, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.



BEADON'S PATENT IMPERISHABLE GUTTER-TILES,
For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.
SOLE AGENT,
J. B. LAWES, 1, Adelaide-place, London-bridge.
This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.
Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 6d. per foot. This charge to include tiles delivered in Agar's yard, cement, and labour. May be had in London, Gloster, Bridgwater, and Rugby.

IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-HOPPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building. Price from 8s. 6d. each, according to size.
IRON GIRDERS and COLUMNS to MODEL or DRAWING.
IRON PIPES and connections for gas, water, and liquid manure.
RAIN-WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, Odd Gutters, Stock-weights, STABLE FITTINGS, pumps, tomb railing, cattle and pig troughs, and COLUMNS with caps and bases, and every kind of builders' castings, in stock, at LYNCH WHITES' Iron Wharf, Upper Ground-street, London, near Blackfriars-bridge.

LESS FUEL, MORE STEAM, NO SMOKE.
GARDNER'S PATENT SMOKE CONSUMER is SELF-ACTING, EASILY FIXED at a SMALL COST, IMPROVES the DRAUGHT, and SAVES FUEL. Applicable to all Furnaces, Boilers, Ovens, Locomotives, Marine Engines, and Open Fires.

"Chemical Works, Bow Common, November 9, 1855.
"DEAR SIR,—In answer to your further inquiry concerning the saving of fuel in connection with the use of your patented apparatus, to which inquiry I was hitherto, from incomplete observation, unable to reply, I beg now to state that we are enabled without difficulty and without smoke, to command a full supply of steam, and to generate it much quicker than we could previously. We employ an ordinary furnace coal. I feel satisfied there is a considerable saving of fuel, the precise amount of which we cannot at present determine.
"I remain, dear Sir, yours truly,
"To E. V. GARDNER, Esq." "FRED'K. ALLEN.
Apply to the PATENTEE, 24, Norfolk-street, Middlesex Hospital; or to Messrs. BURDIDGE and HEALY, 128, Dorset-street, Fleet-street; or Z. D. BERRY, Albion Works, Victoria-road, Pimlico. Bakers' ovens fitted for sole license included.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.
H. MORRELL, BLACK LEAD PENCIL MANUFACTURER, No. 149, Fleet-street, London.
These Pencils are prepared in various degrees of hardness and shades.

H H H for drawing on wood.	F F light and shading.
H H H for architectural use.	F for general use.
H H for engineering.	H black for shading.
H for sketching.	BB ditto ditto.
H B hard and black for drawing.	BBB ditto ditto.
M medium.	BBBB ditto ditto.

Sold by all the principal Stationers in town or country.

H. DOULTON & CO'S.
TERRA-COTTA CHIMNEY-TOPS
Will withstand the action of the Weather and Sea Breezes, and are
QUITE IMPERISHABLE.
Prices not much higher than Cement.
DOULTON & CO.'S
TERRA-COTTA POTS, &c.
Erected in London upwards of 20 years since, are now as sharp and perfect as when first manufactured.
Drawings on application to
H. DOULTON & CO. High-street, Lambeth.

TARPAULINS for COVERING ROOFS during Repairs, SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

TO BUILDERS, CONTRACTORS, SHIPPERS and Others.
G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.
DAVIES and NORMAN, Agents.
Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.
IN EVERY VARIETY.

DOVERCOURT CEMENT WORKS, HARWICH, ESSEX.
JOHN PATTRICK being now the only ROMAN CEMENT Manufacturer at Harwich, hereby informs the public that he continues to carry on a Wholesale business, and offers to Contractors, Builders, &c. by the freight or half freight, ROMAN CEMENT of best quality upon advantageous terms. Application either at Harwich or to his Agent, GEORGE MORRIS, 20, New Ormond street, Queen-square, London
P.S. Inland London trade will in future be supplied from Messrs. ROBINS and CO. Scotland-yard, Westminster, instead of Whitefriars.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at the Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT. CHARLES NELSON, having completed his works for the manufacture of the above Cement, can supply Contractors, Builders, &c. with a very superior article. The manufacturing department being under his own immediate superintendence, he can confidently recommend it for all works in which Portland Cement is used, and only requires a trial to insure approbation.
Orders, addressed to
London Depôt, 16, South Wharf, Paddington,
BLYTH, BROTHERS, Sole Agents,
will meet with immediate attention
Manufactory—Ernesole Mills, Warwick.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland yard and at the Works.

PORTLAND and BATH CEMENTS.
TATHAM and CO
14, South Wharf, Paddington.

SOUTHAM BLUE LIAS LIME DEPOT.
Glazed Stoneware Sewage Pipes.
Brick, Lime, and Cement Merchants,
TATHAM and CO
14, South Wharf, Paddington.

PORTLAND and ROMAN CEMENT. PLASTER of PARIS
Manufactured by J. M. BLASHFIELD, at Millwall Isle of Dogs.
Warehouse, No. 1, Wharf, Paddington-basin.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames street, London; or at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing quantity of strength and colour, and at a less cost than is attainable by most other makers.
These cements set under water in a few minutes, and are not affected by extreme heat or cold.
FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Lath, Sashes, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccos dry quickly, will not be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster

ATKINSON'S CEMENT, so long known and esteemed in London for plastering surfaces, is a quick-setting Cement, that requires no colouring. Address Messrs. JOHN BAZLEY WHITE and BROTHERS, 36, Millbank street, Westminster; and Seel street, Liverpool.

DAMP WALLS.
STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,
Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering In repairs of old plastering it is invaluable A moderate room can be papered for 8s. 6d.
London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Marr-street, Dublin.

HUBBUCK'S WHITE BODY PAINT of superior body to the Best White Lead, whilst it is as smooth and permanent as Zinc Paint. One coat laid on as directed is equal to two coats of White Lead, whilst the consumption of material is less than for one coat. It dries very fast and hard.
HUBBUCK'S STONE COLOUR BODY PAINT the same as the former, at three-fourths the price.
HUBBUCK'S PATENT WHITE ZINC PAINT is invaluable for Iron Ships and Iron exposed to salt water; neither bilge water, nor noxious vapours from cargo or bunkers, or funnels of Steam Vessels act upon it. Sold by the Wholesale Paint Dealers, in original packages stamped, Hubbuck's Patent; and when so marked the quality is guaranteed.
HUBBUCK'S COPPER COLOUR ENAMEL PAINT prepared expressly for the Bottoms of Iron and Wood Steam Ships, a protection from rust and incrustation. Timber sheathing boats framed and copper sheathed may be painted with this paint, neither do the nails attach to it.
Full particulars of THOMAS HUBBUCK and SON, Portland Varnish Works, opposite the London Docks, London.
OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STUNGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is best adapted at these works with especial reference to its destination, whether for shoeing, brickwork, locks for breakwaters, tidal work, or otherwise.—London Wharf, Belvidere road, Lambeth.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company carry out their recognised the best quality of their Bath Cement for all masonic purposes, decorations, &c. as having all the qualities requisite for an interior cement, and for being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 80, Old Broad-street, London, to Mr. M. MENENT, 4, Cope-lane-place, Cheapside; or to Mr. TENEWELL, the Depôt, 4, North Wharf road, Paddington; or to the Works, Dunball, Bridgewater.

C. ATKINSON, 62, Moorgate street, City; from whom also testimonials from eminent engineers as to quality may be obtained

FRONTS of HOUSES. — GREENE and CO.'S PORTLAND CEMENT WASH will not roughen, and does not Peel or Flake like Paint. In cases of Cement for the DAMP WALLS GREENE and CO.'S OXIDE SOLUTION PAINT, a guaranteed remedy, sold in quantities to cover 300 square feet, for 12s.—To be had only of the Inventors, GREENE and CO. 22, Norfolk-street, Islington

BLUE LIAS LIME.—CHARLES NELSON begs to inform Engineers, Architects, Contractors, Builders, and the Trade in general, that he is prepared to supply direct from the Works all towns and places on any part of the Thames, Rye, Lee, or any canal or railway, or rail to all parts of the kingdom, large quantities of the above GENUINE HYDRAULIC LIME now extensively used
Quality, Weight, and Measure may at all times be strictly relied on, reference in proof of the above can be given.
N.B. The Captain of the Boat will always bring with him the Grand Junction Canal Note, from which the contractor will be enabled to know exactly what weight of Lime he is paying for
All orders addressed to the
LONDON DEPOT, 16 SOUTH WHARF, PADDINGTON.
BLYTH, BROTHERS, SOLE AGENTS,
Will be promptly attended to, and any further information can be obtained from them
Works, Stockton field, near Southam, Warwickshire.

PLASTER of PARIS.—MESSRS. BLYTH, BROTHERS beg to acquaint the trade, that they have made a considerable reduction in price; the quality they are now manufacturing cannot fail to give entire satisfaction. Samples and prices forwarded to any part of England, or the metropolis. No extra charge made to any wharf or railway station on board. Any quantity unforthcoming can be obtained at their Works, Baldwin's-place, Gray's-inn-lane, Holborn; or at the Blue Lias Lime Depôt, 16, South Wharf, Paddington.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side); 7, NORTH WHARF-ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.
Large Grey Stone, or Grey Chalk, free on board at Works, 8d. per ton.
Small ditto, ditto, 6d. per ton.
Barges loaded in a few minutes.
Woodham-hall Grey Stone Lime Works, on the Medway, near Rochester.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Brentford and Oxford line of the Great Western Railway, at Hanwell, are now prepared to supply LIME and GROUND LIME of the best quality, direct from the kilns, to all the stations on the Great Western Railway.—Greaves's Blue Lias Lime, Portland, Roman, and Lias Cements. Works at Hanwell; Stocks in, and Wholesale Office, at Warwick.

GREAVES'S BLUE LIAS LIME.—The above Lime supplied direct from the works to wharfs along side the rivers or canals, railway stations, or vessels in the docks. A large supply always in stock. CHARLES RICHARDSON, Brick, Lime, and Cement Merchant, 3 and 6, South Wharfs, Paddington

NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME.
WILLIAM OLDHAM begs to inform those parts requiring a reliable Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality Ground and Lump into boats, at the Works. Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam

JOHNS and CO.'s PATENT PERMANENT STUCCO WASH (perfectly non-absorbent) STUCCO CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Canal Bridge, Old Kent-road. Office, 1, George-yard, Lombard-street.

IMPORTANT to BUILDERS.—GREAT REDUCTION in the PRICE of BRICKS.—BRICKS delivered to any part of the River up to Battersea-bridge, at the following prices, viz.—Grey Stocks, 22s. per thousand; Grizzles, 28s. per thousand; Rough Stocks, 20s.; Place, 13s. to 15s. per thousand.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings of good and sound quality, constantly on sale at H. DODD'S Brick-fields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests architects to favour him with a visit, in order to inspect his stock and to judge for themselves.
Malm Place-built and washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brick-fields, Grange-walk, near the Rosemary Branch, Hoxton
N.B. Light-coloured Brick Sand of a proved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Plinths for building and pottery work, Foundry Loam, Whiting, White Sand for whitening, Hard Drawn Pipes, Patent Drain Pipes, Gas Sett for brick making, &c. &c. sold by barge from Messrs. MEE-ON and CO.'S wharf at Grays, Essex, to any part of the Thames, for various coals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 500 to 800 tons can load alongside the wharves at Grays. At MEE-ON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above-named article can also be procured, as well as all kinds of fire goods, both Welsh and Newcastle. Fire-clay, Flare-burnt Lime, and Marble and Tenner Lime; and here lime is packed in hogs-heads, casks, jars, &c. for exportation
General Office—No. 13, GROCER'S-HARD, LOMBARD-STREET.
Letters address ed to Grays Essex, will meet with immediate attention.

BRICKS, of first-rate quality and good colour, TO BE SOLD for CASH; suitable for forcing-walls, or where great strength is required. Apply to Mr. W. SMITH, Brick-wharf, Grosvenor-road, Thames-bank, near Pimlico Pier.

CHEAP WHITE BRICKS, for FACING HOUSES, Bearn's Patent. These bricks are of excellent make and colour, and impenetrable from frost, and do not vegetate or become green. For particulars, address, Patent Brick Works, Rugby, Warwickshire.

BRICKS.—WANTED, 200,000, Grey, and Stocks suitable for good and Place Bricks, on the Acorn Wharf, on the Grand Surrey Canal, London. Prices and samples to be forwarded to Mr. MAY, Timber Merchant, Old Kent-road.

MONEY and BRICKS.—FREEHOLD LAND TO LET, at low ground-rents, and for long terms. Apply personally, to Messrs. BLAKE and SNOW, 22, College-hill, Cannon-street, City.

BRICKFIELD TO BE LET at TOTTENHAM, containing 6½ acres of excellent malm earth, situate on the south side of the high road, 5½ miles from London. The bricks made in this field have always found a ready sale.—For terms and other particulars, apply to Mr. A. RICHARDS, Auctioneer, Tottenham.

TO BRICKMAKERS and OTHERS.—TO BE DISPOSED OF, a quantity of BRICK EARTH, solid and tunnel, sufficient for 2,000 to 3,000 Bricks. For further particulars apply to Mr. FREDERIC LEE, Arch-terr, 99, Essex-street, Strand.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 red bricks per day, or far more quickly by hand-made, with 3-horse power; one man to feed the machine with clay, and boys to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 1st, 1856.—Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

THE PATENT BRICK MACHINE COMPANY invite orders for their IMPROVED MACHINES. One of them is working in a field at Caterham, near Croydon, and arrangements are made with the owner for bearers of a letter from the Secretary, to see it in operation on Thursday and Friday.
HENRY C. MOUNT, Sec.
37, King William Street, City.

HODSON'S PATENT BRICK-MAKING MACHINE may be seen in operation daily, on application to Mr. B. LOOKER, Jun. Agent, Northon Pottery and Brick and Tile Works, Kingston-hill, Kingston-on-Thames. The machine is confidently offered to the public as the most perfect and simple one that has yet been produced. Price, £35.

TUDDENHAM, IPSWICH, BRICK AND TILE WORKS.

EXPOSITION UNIVERSELLE de 1855.

Medaille de 2me Classe awarded to JAMES LUFF, for Specimens of Ornamental Bricks and Tiles.

JAMES LUFF

Begs to inform Architects and Builders that he MANUFACTURES all KINDS of ORNAMENTAL BRICKS and TILES, Red and White, for Chimney Shafts, Ridge Crests, Cornices, and Mouldings.

Also, all KINDS of ORNAMENTAL VASES, CHIMNEY-POTS, MALT-KILN TILES, DRAINING-PIPES, and TILES of every description.

N.B. Builders furnishing detailed drawings can have all sorts of Ornamental Designs executed.

LOOKER'S PATENT IMPERISHABLE GROUND INDICATORS.

A

Considerable difficulty has arisen among the various Burial Boards appointed under the New Burial Acts, as to the best and most economical method of marking the different grave spaces, in the Cemeteries that have already been opened.

This apparent want has suggested the idea of EARTHENWARE MARKS, or INDICATORS, of the form shown in the accompanying Engravings.

A is a sketch of the Patent Indicator, and B represents it as fixed in the ground.

The Indicators are made hollow, in well-burnt red or other pottery, with a thick sloping top, on which are impressed any letters or numbers that may be required. The lower part of the Indicator has openings, which give it a firm hold in the ground.

The advantages which these Marks possess need scarcely be mentioned. They will remain in the ground for centuries, unaffected by damp or change of atmosphere, and the figures, &c. being impressed, are as durable as the Indicator itself. They occupy but little space, while a good view is presented of the impression on the top. And the expense of these Indicators is not a third of that of Marks made in other perishable materials.

The Patent Indicator can be made of any shape or size applicable to every purpose for which a mark in the ground may be necessary.

*** *A limited number of Licenses will be granted to respectable Manufacturers.*

B

Further Particulars and Prices may be obtained, and Specimens seen, on application to

BENJAMIN LOOKER, JUN.
INVENTOR, PATENTEE, AND MANUFACTURER, KINGSTON-ON-THAMES.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that **FOUR-FIFTHS** of the **ROUGH PLATE**, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for **RIDGE** and **FURROW ROOFS**, giving a **SPAN** of **TWELVE FEET**, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders **BLINDS UNNECESSARY**, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

MACFARLANE'S PATENT

CAST-IRON PUBLIC WATER-CLOSETS AND URINALS,

FOR STREETS, RAILWAY STATIONS, WORKHOUSES, FACTORIES, BARRACKS, SCHOOLS, &c.

WALTER MACFARLANE and CO. having been engaged for several years in perfecting and testing their WATER-CLOSETS and URINALS for public purposes in their own city, beg now respectfully to submit them to general notice.

WATER-CLOSETS.—The simplicity of their construction and durability peculiarly fit them for public purposes. They require no cistern nor water pressure, are as efficient with an intermitting as with a constant supply of water, do as well with waste water as with clean, and require less than any closet in use. The whole working gearing is entirely out of the control of the persons using the Closet, and no action of any part takes place except for a few minutes once a day. They are made in ranges, to accommodate any number of persons; and when required for streets or other public situations, are inclosed in a neat cast-iron structure, with or without separate compartments and doors.

URINALS.—These are simple and durable in their construction, and adapted for all situations. Those for street use are of easy access, occupy very little room, and of a neat ornamental design. They can be fitted up on the most suitable parts of a street without in the least detracting from the general amenity of the neighbourhood, and made in ranges, to accommodate any number of persons.

WALTER MACFARLANE & CO. PATENTEES AND MANUFACTURERS,

SARACEN FOUNDRY, GLASGOW.

LONDON AGENT—THOMAS BEGGS, SANITARY ENGINEER, 37, SOUTHAMPTON-STREET, STRAND.

For Drawings, Prices, and Particulars, apply as above.

TO BUILDERS, COACH-MAKERS, DECORATORS, HOUSE-PAINTERS, &c. &c.

CHAS. W. NOBLE (late A. and F. Strong), VARNISH MANUFACTURER, continues to supply every description of Varnishes and Colours, of the very first quality, and at the lowest prices. The Varnishes manufactured by Noble have stood the test of nearly a century, made of pure gum copals, insuring that desideratum in varnish—body, pale, and finish, for which his predecessors have been so long and so favourably known.

*** Methylated Spirit Varnishes. Polishes, &c.; also N. Noble's Flamed Paper Varnish, for decorators, &c. Coach-painters' and Lithographic Colours.

N.B. Merchants and shippers will find an advantage in exporting Noble's Varnishes

Manufactory—MITCHAM, Surrey.

Wholesale and Retail Warehouse 137, LONG ACRE, London.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark Saw Mill, Rotherhithe.

TO TIMBER MERCHANTS and OTHERS. The Proprietors of Letts's Wharf, Commercial-road, Lambeth, offer the most convenient Wharf for landing all sorts of Dutch Timber, &c. Spacious Dry and Drawing Docks, and Patent Cranes, Sawpits for converting Timber, &c. Freights paid on delivery.—Apply to G. NOKES and CO. as above.

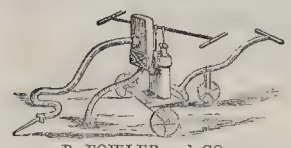
LETT'S WHARF PATENT SAWING, PLANING, and VENEER-CUTTING MILLS, Commercial-road, Lambeth.—The Proprietors beg to announce to the trade that they have completed their extensive arrangements, and will be happy to execute all orders intrusted to their care with despatch and punctuality.

N.B. All goods sawn at these mills fetched and delivered free of charge.

TIMBER SAWING MILLS, Belvedere-road, Lambeth. ROBINSON and BARTRAM respectfully inform their friends in the Timber and Building Trades, that they have now completed their New Mill for Sawing building and other Timber, and will be glad to receive their favours in this department of sawing. Full particulars will be forwarded on application, per post or otherwise. Timber up to 55 feet long can be cut at these mills.—N.B. A powerful Crane for landing timber on to carriages, at 1s. 3d. per load.

NEW KENT-ROAD SAW-MILLS, half-way between Surrey Docks and West-end.—Messrs. TAYLOR and BUCKLEY beg to inform Timber Merchants, Builders, and Others, that having made large additions to their machinery, they are in a position to execute orders on the shortest notice. Extensive premises for piling goods. List of prices will be forwarded upon application.

TO FRENCH POLISHERS, CABINET-MAKERS, BRASS-WORKERS, &c.—A considerable reduction has taken place in the prices of French polish, white and brown hard spirit varnishes, patrit lackers, and finishing spirit. The present price is 6s. to 6s. 6d. per gallon; white French polish, 10s. per gallon; white shellac, 4s. 6d. per lb.; gums, shellacs, and sold at the lowest prices. A net cash list forwarded on application to JAMES SLIPPER, 87, Leather-lane; and 14 and 15, Berrington-street, Holborn, London.



STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure of the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 14, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

TO BE SOLD, a TURRET CLOCK (by Parnell), 3 feet dial, with striking-bell; also, a Composition Centre Ceiling Flower, 8 feet diameter. Apply to Mr. TAYLOR, Builder, 87, Upper Seymour-street, Somers-town.

KENT'S PAINTING-BRUSHES are of the very best quality, and may be obtained at all the first houses in the trade, and of the manufacturer, G. B. KENT and CO. 11, Great Marlborough-street, London. Established 1777.

N.B. Kent's Painting Brushes are all stamped G. B. KENT & CO.

Price Lists forwarded by post.

B. FOWLER and CO.

SOLE MANUFACTURERS OF HOLMAN'S PATENT DOUBLE-ACTION CESSPOOL, SEWER FLUSHING, LIQUID MANURE, AND UNIVERSAL FORCE PUMP.

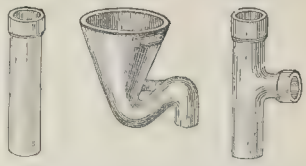
Manufacturers of every description of Sanitary Glazed Sewage Pipes, Bends, Junctions, White Glazed Closet Pans, Gas Retorts, Furnace Blocks, Crucibles, Fire Clay, &c. &c.

The Fire Bricks made from the Clay of this estate have been tested, and proved to be in every respect equal to those of Stourbridge and Newcastle.

DRAWINGS AND PRICES MAY BE HAD OF J. COX, AS ABOVE.

UNDERHAY'S PATENT REGULATOR CLOSETS for constant or intermitting supply, dispense with Cisterns, Service Boxes, Valves, Levers, Cranks, Levers, &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets, on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed. 5,000 of them have been sold, and no instance of failure has occurred.



These Stool-valves are cheaper, stronger, and more ornamental, than any other. Many thousands are in use, and greatly approved of.

Manufactured by CHARLES BUTTEN and SON, Brass Founders, Crawford-passage, Clerkenwell, London.

SUPERIOR STONEWARE GLAZED PIPES of a quality not to be surpassed.—E. and W. STURGE respectfully invite attention to the very superior character of their stone pipes, which they are confident are such as must give great satisfaction, the price being also lower than many in the trade, viz. 25 per cent. discount off the list for cash. Junction Bends, &c. Pans and Traps of the first quality. Yorkshire Paving, Sinks, Slabs, &c. all at low cash prices.—E. and W. STURGE, Bridge Wharf, City-road.

N.B. A small extra charge is made upon goods required to be delivered.—October 1, 1855.

GREAT REDUCTION in the PRICE of STONEWARE POTTERY from this date.

VICTORIA POTTERY, LEIGH, near SOUTHEND; London Establishment,—Falcon Wharf, 89 Bankside.—DAVID MOUNTAGUE, Manufacturer of every article of Lambeth POTTERY, having a wider experience, the public, agents, builders, and others, STONEWARE PIPES, &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application as above.—Feb. 11, 1856.

PATENT DRAIN-PIPES, UNGLAZED, manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.

PRICES.

3 inch bore, in 2 ft. 6 in. lengths, at					3d. per foot.
4	"	"	"	"	4d. "
6	"	"	"	"	6d. "
9	"	"	"	"	9d. "
12	"	"	"	"	1s. 3d. "
15	"	"	"	"	2s. 6d. "

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

BY HER MAJESTY'S ROYAL LETTERS PATENT, APRIL 25, 1855.

JAS. LEWIS'S PATENT STENCH-TRAP

FOR STREET USE

Price, with Gutter Plate, 18 inches by 12 inches, each 25s.; weighs about 2 cwt. Larger sizes made, if required.

FOR AREAS, &c.

Price, with Back Plate, 6 inches by 7 inches, each 6s.

FOR COURTS, YARDS, &c.

10 inches by 8 inches, each 10s.

The above articles are protected for the Patentee by the British Government, and no one but himself has the construction for the advantages they possess, being a perfect trap for preventing smell proceeding from itself or the drain, should there be water or not in the pan. When stench-traps are put down generally speaking no attention is ever paid to them afterwards—this renders them useless. The above, therefore, are a desideratum, as they require no attention. It is well known when cholera has visited this country, it commences and leaves last those places where the air is vitiated by obnoxious gases proceeding from drains, &c.

Any inhabitant suffering inconvenience, is entitled, by the Sanitary Act to lay complaint before the public or private authorities of the property, to lay down stench-traps where they are required. Any persons interested in this advertisement will be kind enough to write to the patentee for drawings, and if wishful, testimonials. Please order from any respectable ironmonger, contractor, or the Patentee, JAMES LEWIS, Ironfounder, Aberystwyth. Specimens to be seen in the Court of Inventions, Crystal Palace, Sydenham.

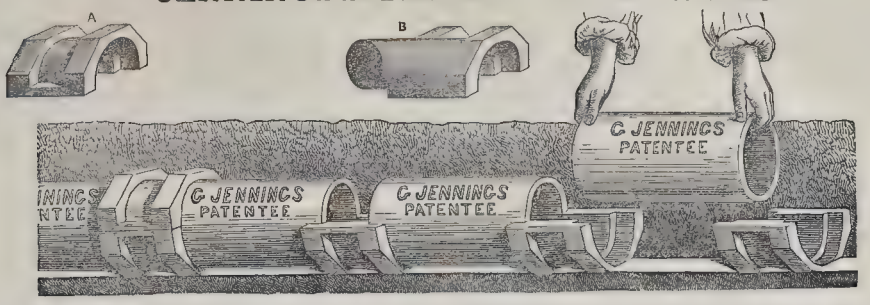
PATENT SOLID SWISS PARQUETERIE.

This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s. per foot super, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 3, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 86, New Bond-street.

DECORATIVE PAINTING.—CHARLES KUCKUCK, Decorator to His Majesty the King of Hanover, whose works may be viewed in numerous public and private buildings in the metropolis, most respectfully begs to invite the attention of the nobility and gentry to his considerably increased establishment.—Address, 53, Pall-Mall. Hours from Nine till Six o'clock.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior quality to that of any and all competitors, as has heretofore been accomplished.



Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheels ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic scale, with improved Clappers, and pegged on a new system which gives a superior tone and facility for ringing.

JENNINGS'S PATENT DRAIN-PIPES.

THE PATENT CHAIRS AND SADDLES above shown are to a line of pipes the SAME SUPPORT AS SLEEPERS TO A LINE OF RAILWAY, the base of each Chair being BROAD and STRONG. The pipes are simple cylinders, of uniform thickness, made without the usual socket; the drying and burning, in consequence, is much more perfect. Pipes thus made and connected will be found to BEAR ANY PRESSURE, and are in no way liable to derangement. The laying of these pipes, and the making of the joints, IS DONE AT ONCE, EACH PIPE BEING BEDDED AS IT IS LAID, and the space between allows the workman to strike up the joint, and the superintendent TO SEE that every pipe is ACCURATELY LAID and PROPERLY JOINTED.

A shows one of JENNINGS'S PATENT SADDLES OR COVERS, by means of which examinations are effected; B shows one of the PATENT JUNCTION COVERS, by which connections are made to finished lines of pipes, it being only necessary AT ANY TIME to remove a PLAIN Cover or Saddle, A, and substitute a Junction Cover, B, the Junction being THE SIZE of the Branch Pipe.

The favour with which these pipes have been received will no doubt give rise to many imitations, as it is much easier to COPY than to INVENT; but GEORGE JENNINGS hopes his sanitary patrons will give HIM CREDIT for being THE FIRST TO SHOW HOW JUNCTIONS MAY BE INTRODUCED, OR EXAMINATIONS MADE, TO FINISHED LINES OF PIPES. These important improvements, as above shown, are PATENTED; and GEORGE JENNINGS would caution those who desire TO PROFIT BY HIS IDEAS, NOT TO INFRINGE HIS PATENT RIGHTS, as they will not be allowed to do so with impunity, although he feels confident the ORIGINAL, for its SIMPLICITY and EFFICIENCY, will be preferred to any copy.

Prices of JENNINGS'S Drain Pipes, per foot run, including the Patent Chair and Saddle, are as follows:—4-inch, 6d.; 6-inch, 8d.; 9-inch, 1s. 1½d.; 12-inch, 1s. 10d.; 15-inch, 3s.; 18-inch, 4s.; with the usual discount to the Trade.

JENNINGS'S PATENT DOUBLE-SEATED VALVE-CLOSET.

Architects describing this Closet in their specifications will have a PERMANENTLY GOOD VALVE CLOSET, NOISELESS, and FREE FROM COMPLICATION. The Patentee has such confidence in its DURABILITY and EFFICIENCY, that he will guarantee every Closet for SEVEN YEARS.

JENNINGS'S IMPERISHABLE EARTHENWARE CLOSET AND TRAP.

This Closet has a large water surface, has no back to soil, is imperishable in its material, and the Trap and Closet is combined in one piece, suited alike for the PALACE or the COTTAGE.

JENNINGS'S IMPROVEMENTS IN LIFT AND OTHER PUMPS.

These Pumps would well repay a visit to Jennings's factory, where may be seen Jennings's Lavatories, Urinals, Sluice Valves, Fire and Steam Cocks, of every size; Shop-Shutter Shoes; Gully, Area, and Sink Traps, and other sanitary goods.

Or Illustrations and Prices can be had free by post, if two stamps are enclosed to

GEORGE JENNINGS, SANITARY ENGINEER, 29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD, LONDON.

AYLESFORD POTTERY COMPANY'S PATENT DRAIN-PIPES.

THE above Company respectfully invites the attention of Engineers, Architects, Surveyors, Builders, &c. to an improved DRAIN-PIPE, whereby all stoppages may be cleared without disturbing the invert of the drain, by simply removing the cover (marked A or B) whichever may be preferred.

The cover (marked B) may be used in conjunction with whole or half-socket Pipes.

Pipes thus constructed may be laid at intervals in a drain of ordinary Socket-Pipes.

With the great advantage these Pipes offer, they are cheaper than any yet submitted to the public.

London Depôt—AYLESFORD WHARF, Belvedere-road, Lambeth.

MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

GREAT REDUCTION IN PRICES

OF WHOLE OR HALF-SOCKET GLAZED STONEWARE DRAIN-PIPES.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 22, Old Fish-street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 28s. and perfect action guaranteed.

SALES BY AUCTION.

TO NOBLEMEN, GENTLEMEN, ARCHITECTS, BUILDERS, LANDSCAPE GARDENERS, AND OTHERS. Second Annual sale of the valuable and beautiful Materials manufactured of Ransome's Patent Silicious Stone

MESSRS. MANSELL and ELLIOTT are favoured with instructions from the Directors of the Company, to SELL by AUCTION, on the PREMISES, Whitehall Wharf, Cannon-row, Westminster, on TUESDAY, MAY 13th, 1856, and two following days, at TWELVE for ONE o'clock precisely, in lots adapted for private purchasers, the trade, and shippers, a well-selected assortment from the extensive stock at Ipswich of ITEMS adapted for ornamenting ecclesiastical buildings, mansions, and cottages, designed in the various styles of architecture by first-rate artists, including rich and elaborately-worked altar-pieces, screens, chimney pieces, dados and sills; reredos, pillars, pilasters, entablatures complete, capitals, caps, bases, cornices, moulding, porch and window dressings for architraves, brackets, trusses, circled and plain balustrading, gate and other piers, pedestals in great variety, terminals, sculptured quoins, copings, and string courses. The enrichments comprise fountains, shell and rock work, flower vases, tazzas, flower stands and boxes, fern tazzas, sun-dial pedestals, and terrace balustrading. The miscellaneous articles consist of coats of arms, turrets, pinnacles, fonts, mural tablets, combs, and every item that can be made in wrought or sculptured stone. Messrs. MANSELL and ELLIOTT beg to draw especial attention to this important sale, for the Patent Silicious Stone is superior, in appearance and durability, to any other stone, being unaffected by weather or age; and as its extraordinary capabilities of application are too numerous to particularise in an advertisement, they invite an inspection of the materials. The whole may be viewed three days prec ding the sale, and catalogues had (fourteen days prior) on the Premises, and of the Offices of Messrs. MANSELL and ELLIOTT, Auctioneers and Valuers, Belgrave-square (corner of Halkin-place), and 12, Birchin-lane, Cornhill, from whom plates of designs may be had.

TO BUILDERS and OTHERS Kensington park, contiguous to Kensington-gardens the Park, &c

MR. D. A. RAMSAY will SELL by AUCTION, at the MART, on MONDAY, MAY 5, at TWELVE, in two lots, by order of the Mortgagee, under full powers of sale, a very eligible LEASEHOLD ESTATE, comprising five private residences (nearly finished), of a uniform and neat elevation, agreeably situate, and being Nos. 8, 10, 12, 14, and 16, Portland-road North, immediately in the rear of Clarendon-road, the principal thoroughfare through the much admired and tastefully arranged Kensington park. When completed and let, the property is estimated to produce 90*l.* per annum which is held on lease for long terms at low ground-rents. To be viewed, and particulars obtained of WILLIAM PALMER, Esq. Solicitor, 3, George-street, Euston-square; at the Mart; and of Mr. D. A. RAMSAY, Auctioneer and Estate Agent, 79, King William-street, City.

TO BUILDERS AND OTHERS.—2,000 Plank Deals, Battens and Pine Plank, small quantity of Ironmongery, Floor-boards, &c.

MR. D. A. RAMSAY has received instructions from Mr. W. SIMS, to SELL by AUCTION, at HORNGATE WHARF, Pried-street, Hadleigh-road, on WEDNESDAY, MAY 7th, at TWELVE o'clock (to cover advances made):

750 Pieces Dry Yellow Pine (Squancey)
200 Yellow Battens Ditto
1,000 Plank Deals and Battens (Red Pine).
1,100 White Battens (Gothenburgh).

COMPETITIONS.

NEW WORKHOUSE for the CITY and COUNTY of NORWICH.—To ARCHITECTS.—The Guardians of the Poor of the Norwich Corporation are desirous of being furnished with PLANS, ESTIMATES, and GENERAL SPECIFICATIONS for the ERECTION of a NEW WORKHOUSE for the City and County of Norwich, on a site near the north entrance to the new Cemetery, to contain 1,200 inmates. A lithographed plan of the site, with sections, together with instructions to architects as to the wards, rooms, and offices required, and all other particulars, may be had on written application to me on and after MONDAY, the 28th day of APRIL instant. The maximum sum proposed to be expended in the building is 20,000l. The plans, &c. are required to be sent by post, addressed to me, on or before TUESDAY, the 6th day of JULY next. Premiums will be given for the best and second best plans.
By order of the said corporation,
Norwich, April 17, 1856. E. C. BAILEY, Clerk.

TO ARCHITECTS AND BUILDERS.

CHELTENHAM COLLEGE.—It being in contemplation to build a CHAPEL in connection with this College, Architects and Builders are invited to send in PLANS and SPECIFICATIONS, addressed to the Secretary, on or before the 1st day of JUNE next (accompanied with a cypher). Such chapel to be capable of accommodating 700 persons, and in cost not to exceed 4,000l. A premium of 25 guineas will be given by the Directors of the College for the plan and specification selected, and it must be understood that the Directors shall in no case be subject to any payment for plans or specifications except the premium above mentioned.—For further particulars, apply to Mr. W. L. BAIN, Secretary to the College, Cheltenham.

CONTRACTS.

TO IRONFOUNDERS and OTHERS.—The Directors of the Tunbridge Wells Water Company are desirous of receiving TENDERS for the SUPPLY of about 1,000 YARDS of CAST IRON MAIN PIPING, to be delivered at the railway station, Tunbridge Wells. Tenders and specifications to be sent in on or before the 12th inst. to Mr. W. H. DELVES, Secretary to the Company, Tunbridge Wells.

CONTRACTS.

WELLS, Somerset.—To BUILDERS and CONTRACTORS.—Persons desirous of CONTRACTING for the ERECTION of new PAPER-MILLS at Wookey Hole, near Wells, may inspect the plans and specification at the Office of the undersigned, on and after THURSDAY, 15th inst. Sealed Tenders to be delivered on or before 31st inst. The lowest Tender will not necessarily be accepted.
EDWIN HIPPISLEY, Architect and Surveyor,
Dated May 8th, 1856. Wells, Somerset.

NORTH AYLESFORD UNION.—To BUILDERS.—The Guardians of the North Aylesford Union are desirous of receiving TENDERS for the ERECTION of a new INFIRMARY and other BUILDINGS, and for making various alterations and additions to the existing buildings at the Union Workhouse at Strood. All Tenders must be delivered, free of expense, at the Union Workhouse, Strood, sealed and endorsed "Tender for Works at the North Aylesford Union Workhouse," at ELEVEN o'clock in the forenoon of THURSDAY, the 5th day of MAY next, at which time and place parties tendering, or parties on their behalf, must be in attendance. The plans and specifications may be inspected at the Union House, any day except Sundays, between the hours of TEN and FOUR; and further particulars may be obtained from Mr. MARTIN BULMER, Architect, Maidstone. The bills of quantities and form of Tender are to be obtained at the Union House, upon payment of five shillings for each copy. The Guardians will not be bound to accept the lowest or any other Tender, and security will be required for the due performance of the works. By order of the Board,
J. S. BULLARD, Clerk to the Board of Guardians.
Strood, Rochester, 30th April, 1856.

TO BUILDERS.—Sealed TENDERS, in one specific sum, will be received by the Director-General of Contracts, Pall-mall, London, on or before the 19th day of MAY, 1856, at NOON, for the following SERVICES, at BULL POINT, near Devonport, viz:
1. Building a Case Store, Barrel-Store, Breaking-up-House, Racks, Privies, &c.
2. Lengthening the Siding of Railroad outside the Magazine Inclosure.
3. Building Cottages for Two Foremen and Five Labourers.
4. Building a Store for Planks, Store for Flannel Cartridges, Foreman's Office, and Printing-press Room, &c.

Detailed specifications of the above four Services, with every requisite information, may be obtained at the Royal Engineer Office, Bull Point, any Sunday excepted between the hours of TEN and FOUR o'clock, from the 24th of APRIL to the 14th of MAY, 1856, both days inclusive.
Royal Engineers' Office, Devonport, April 19, 1856.

ROYAL ENGINEER CONTRACT.—WAR DEPARTMENT.—The War Department being about to enter into CONTRACTS for the following Trades at Weymouth, Portland, and Sherborne, from the date of the acceptance of the Tenders, to the 31st MARCH, 1859, viz.:—
CARPENTERS.

The party whose Tender may be accepted for the work will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of 500l. for the due performance of the contract. Tenders for the above work to be addressed to the Director General of Contracts, Pall Mall, London, and endorsed "Tender for Paving Stables, &c. at Canterbury Barracks."
N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, Dover, 9th May, 1856.

TO SCAVENGERS AND OTHERS.

THE COMMISSIONERS of SEWERS of the CITY of LONDON hereby give Notice, that they will meet in the Guildhall of the said City, on TUESDAY the 20th day of MAY next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for CLEANSING the STREETS and REMOVING DUST, &c. from the houses of this City, for the term of one year from Midsummer-day next, agreeably to the provisions of a specification, a copy of which may be had upon application at this office. The Commissioners will also at the same time and place receive PROPOSALS for WATERING certain of the STREETS of the said City twice a day, agreeably to a specification to be seen at this Office. The City is divided, for the purposes of these contracts, into four divisions. Each contractor will be required to enter into bond, with two approved sureties, for the due performance of his contract. The Commissioners do not pledge themselves to accept the lowest Tender, nor any, unless deemed satisfactory. No Tender will be received after TWELVE o'clock on the day of treaty, nor will any Tender be read which does not distinguish in an inclosure of an 3d Bank of England note, as an evidence that the deposit is made bona fide, which sum will be immediately returned to each person whose Tender is not accepted and will be forfeited in the other cases until the contract and bond are duly executed.
JOSEPH DAW, Principal Clerk.
Sewers Office, Guildhall, April 19, 1856.

BOROUGH of STOCKPORT.—To CONTRACTORS and BRIDGE BUILDERS.—The Council of the Borough of Stockport desirous of obtaining TENDERS for the ERECTION of a STONE, or STONE and BRICK, BRIDGE, of three arches, over the river Mersey, between Heaton Norris and Chester-gate, in the Borough of Stockport, together with the approaches thereto. The plans and specifications may be inspected at the Offices of Messrs. CAWLEY and RADFORD, Civil Engineers, 41, John Dalton-street, Manchester, on and after MONDAY, the 28th day of MAY next; and sealed Tenders must be delivered at the Court-house, Stockport, addressed to the Chairman of the Municipal Rights Committee, on or before MONDAY, the 19th MAY next.
JOHN VAUGHAN, Town-clerk.
Court-house, Stockport, April 24, 1856.

TO BUILDERS.

PERSONS willing to CONTRACT for the ERECTION of a new WING to the mansion of Sir Henry G. Cotterell, Bart, may see the drawings and specifications on and after MONDAY the 28th inst. by applying to Mr. WILSON, Architect, Tenders to be sent in on or before TUESDAY, MAY 6th. The proprietor does not bind himself to accept the lowest or any tender, nor will any allowance be made for Estimates.
Garnons, near Hereford, May 1st, 1856.

TO BUILDERS AND CONTRACTORS.

LOUGHBOROUGH CEMETERY WORKS.—The Burial Board for the Parish of Loughborough, in the County of Leicester, are desirous to receive TENDERS for the several works (which will be divided into sections), required to be done in the ERECTION of two CHAPELS, to be erected with tower and spire, lodge and other buildings, &c. Also for the forming of roads, walks, fencing, and general draining. The plans and specifications may be seen at the Offices of the Architects, Messrs. BEDDOWS and WALLEN, 30, Bedford-place, London, and after the 5th day of MAY next, until the 12th day of MAY inclusive; and the said drawings and specifications may be viewed on and after the 12th day of MAY, until the 27th day of MAY inclusive, at the Offices of Messrs. HOWE, W. H. TOONE, Solicitors, Loughborough, where sealed Tenders are to be delivered addressed to the Chairman of the Board, not later than the 26th day of MAY, endorsed "Tender for Cemetery Works." The Board do not bind themselves to accept the lowest Tender.—By order,
W. H. TOONE, Clerk to the Burial Board.
Loughborough, April 28, 1856.

TO BUILDERS.

SUCH Bricklayers, Masons, Plasterers, Carpenters and Joiners, Plumbers, Glaziers, Slaters and Painters as are willing to undertake the ERECTION of a DWELLING-HOUSE on the Driffield Estate, the Mount, York, may inspect the drawings and specification at our Offices from the 5th to the 15th inst. inclusive. Sealed Tenders are to be delivered to the Architects on or before the 16th inst. at FOUR p.m. Security will be required for the due performance of the works, and it is hereby notified that no pledge is given to accept the lowest or any Tender. Schedules of the quantities may be obtained on application on and after the 12th inst.—By order of JOSEPH ROWNTREE and JOSEPH PENNY.
J. B. and WM. ATKINSON, Architects.
16, Micklegate, York, 3rd May, 1856.

[For remainder of Contracts see next page.

CONTRACTS.

TO ENGINEERS, BUILDERS, AND OTHERS

THE DIRECTORS of the ST. ALBAN'S GAS and WATER COMPANY are desirous of receiving TENDERS for ENLARGING the GAS WORKS in that town agreeably to plans and specifications which may be seen at the Offices of Messrs. PAGE and CAMERON, Architects, Surveyors, 64, Old Broad-street, London; or at the Manager's Office, London-road, St. Alban's. Sealed Tenders to be delivered at my Office, at St. Albans, on or before the 18th day of MAY instant. No Tender will be received after TWELVE o'clock at noon on that day. RICHARD GIBBS, Manager of the Works.

WARWICK LOCAL BOARD of HEALTH.—CONTRACTS for DRAINAGE and WATER WORKS.—The Board hereby give Notice, that they are prepared to receive TENDERS from parties who may be willing to CONTRACT for LAYING certain SEWERS and CAST-IRON DRAIN PIPES, and CAST-IRON WATER PIPES Building an Engine and Boiler House, Constructing Reservoirs, Filter Beds, and Pump Well; also, for supplying a Wrought-iron Tank, and the Construction of a Service Tower and other Works. The Contract drawings and specifications may be examined at the Office of the undersigned, at Warwick, on and after the 8th inst.; where also, statements of quantities for each Contract may be obtained. Further particulars will be given at the Offices of Mr. ALFRED BARNES, Engineer to the Local Board, 4, Trafalgar-square, London. Tenders must be sent in on or before the 2nd day of JUNE next. No Tender will be considered unless duly made upon the printed forms. By order of the Board,

JAMES TIBBITS, Clerk to the Local Board.

Warwick, May 1, 1856.

SAINT GILES, CAMBERWELL.—To SEWER CONTRACTORS and OTHERS.—The Sewer and Sanitary Committee will meet to receive TENDERS for EXCAVATING certain new SEWERS and other works required in the Parish, on FRIDAY evening, the 16th MAY instant, at SEVEN o'clock precisely, at the Vestry Hall, Camberwell. Plans and forms of Tender will be supplied and no Tender will be received unless in accordance with the instructions contained in the specification and conditions; and the parties must be in attendance when their tenders are opened. Satisfactory responsible persons required. The Committee do not bind themselves to accept the lowest or any Tender. Particulars to be obtained between the hours of TEN and FOUR, at the Office of the Surveyor, Vestry-hall, Camberwell, on and after SATURDAY next. GEO. WM MARSDEN, Vestry clerk.

Dated May 3, 1856.

TO BUILDERS

PARTIES desirous of CONTRACTING for the ERECTION of a CARPET-FACTORY and other Buildings at Kidderminster, in the county of Worcester, for Messrs. Crane and Barton may inspect the plans and specifications for same on application to the Architect, Mr. JOHN GEO. BLAND, Offices, Unity-buildings, Temple-street, Birmingham; of whom all further particulars and copies of the quantities may be obtained. Applications to be made to offer (printed Tenders), and the Tenders to be delivered in the course of the following week: the precise day will be intimated to applicants. The lowest Tender will not necessarily be accepted.

TO BUILDERS

NEW CHURCH at EASTWOOD, NOTTS. Persons willing to CONTRACT for the WORKS to be done in BUILDING a NEW CHURCH, at Eastwood may see the plans and specifications, on application to the Architect, Mr. R. BARBER, on and after the 13th inst. Sealed Tenders to be sent to the Rev. H. W. PLUMPTRE, Eastwood Rectory, on or before the 29th instant. The lowest Tender will not necessarily be accepted.

ST. THOMAS DISTRICT CHURCH and PARSONAGE, LAMBETH.—TO BUILDERS.—Persons desirous of TENDERING for the above Works are requested to communicate their intention to the Architect, Mr. PETTERS, 9, Craig's-court, Charing-cross, where the plans and specifications may be inspected.—Tenders to be delivered on or before ONE o'clock on the 20th instant, at Mr. TALLON'S Office, as above, sealed up and addressed to the Trustees, who do not bind themselves to accept the lowest or any Tender.

BERMONDSEY VESTRY, SURREY.—To IRONFOUNDERS, BUILDERS, and OTHERS.—Notice is hereby given, that the Vestry of this Parish will meet at the Work-house, Bermondsey, on MONDAY, the 19th day of MAY instant, at SIX o'clock in the evening precisely, to receive TENDERS for the SUPPLY of CAST-IRON GULLY GRATES and INSULATING COVERS for GULLY BOXES, MANHOLE PLATES, and other IRON WORK, which may be required by them from the date of the acceptance of the contract to Midsummer, 1857.—Printed forms of Tender may be obtained, and the conditions of the contract inspected, at the Office of Mr. GEO. ELKINGTON, the Surveyor to the Vestry, in Maltby-street, Bermondsey, daily, between the hours of NINE and FOUR, and no other forms of Tender will be accepted. Tenders must be delivered sealed up at the Office of the Clerk, in Maltby-street aforesaid, directed and endorsed "Tenders for Iron-work," before TWO o'clock on the day of meeting. The contractor will be required to enter into a contract, and find two responsible parties to enter into bonds with him for the due performance thereof. The Vestry do not bind themselves to accept the lowest or any Tender. G. H. DREW, Clerk.

Office of Works, Maltby-street, May 6, 1856.

TENDERS for the ERECTION of SCHOOLS.—The Directors of the Rhymney Iron Company are desirous of receiving TENDERS for the ERECTION of SCHOOLS, at the Company's Works at Rhymney, in Monmouthshire, near Merthyr Tydfil. Plans and specifications may be seen, after the 30th inst., at the Company's Offices, 29, Laurence Pountney-lane, London; or at Rhymney.—Tenders, endorsed "Tenders for Erection of Schools," to be addressed to the Secretary, at the London Offices, not later than the 20th of MAY next.

25, Laurence Pountney-lane, 11th April, 1856.

SAINT ANNE, SOHO.—The Burial Board for this parish is about to alter the parish watch-house, Builders and others desirous of TENDERING for the Works may inspect the plans and specifications at the Office of the Burial Board, 17, Carlile-street, Soho, on or before SATURDAY, the 24th inst. The Burial Board do not bind themselves to accept the lowest or any Tender. Tenders to be delivered at the Office, in Carlile-street, on MONDAY, the 26th inst., by SEVEN o'clock precisely, when the Tenders will be opened.

May 7, 1856. GEO. ELLEN, Clerk to the Board.

TO CONTRACTORS and BUILDERS.—Notice is hereby given, that TENDERS will be received at the Office of the Vestry Clerk, in the Vestry-hall, Paddington, by TWELVE o'clock, on WEDNESDAY, MAY 28, 1856, from such persons as may be desirous of CONTRACTING for the SUPPLY of CAST-IRON PIPES, for the Construction of Sewers, Branch Drains, and Water Mains, and for the Supply of Fire-plugs and Valves, and for the Erection of Buildings, Engine and Boiler Houses, Reservoirs, Filtering Beds, and Pump Well, in the Vestry-yard, Harrow-road. Plans, specifications, and forms of Tender may be seen, and further particulars obtained, at the Vestry Clerk's Office, between the hours of TEN and FOUR o'clock. Each Tender must be delivered sealed up, and addressed to the Vestry Clerk, at the Vestry-hall, Paddington, on or before SIX o'clock precisely on the day above named, when the Tenders will be opened in the presence of such of the Contractors as may attend. The Vestry do not bind themselves to accept the lowest or any Tender.

By order of the Board, GEO. ELLEN, Vestry Clerk.

Cavalry Barracks, Brighton

TO BUILDERS AND CONTRACTORS

PARTIES willing to CONTRACT for the ERECTION of a new CHAPEL, at Aviesbury, Bucks, may see the plans, specifications, and conditions under which the Contract will be entered into, on application to Mr. JOHN GUNN, Aylesbury. The Contract will be opened and directed to Mr. Gunn, not later than THURSDAY, the 22nd instant, at FIVE o'clock p.m. The lowest or any Tender will not necessarily be accepted. Information, and other particulars, can be obtained by application to Messrs. POULTON and WOODMAN, Architects, Grey Friars-pl, Reading.

CONTRACTS.

BERMONDSEY VESTRY, SURREY.—To CONTRACTORS for SEWERS, BUILDERS, and OTHERS.—Notice is hereby given, that the Vestry of this parish will meet at the Work-house, in Russell-street, Bermondsey, on MONDAY, the 19th day of MAY instant, at SIX o'clock in the evening precisely, to receive TENDERS for the SUPPLY of MATERIALS and the execution of Jobbing and Measured Works required for the Sewers and Drains within this parish, from the date of the acceptance of the contract to Midsummer, 1857. Printed forms of Tender may be obtained, and the conditions of the contract inspected, at the Office of Mr. GEO. ELKINGTON, the Surveyor to the Vestry, in Maltby-street, Bermondsey, daily, between the hours of NINE and FOUR, and no other forms of Tender will be accepted. Tenders must be delivered sealed up at the Office of the Clerk, in Maltby-street aforesaid, directed and endorsed "Tenders for Sewers Work," before TWO o'clock on the day of Meeting. The contractor will be required to enter into a contract, and find two responsible parties to execute a bond with him for the due performance thereof. The Vestry do not bind themselves to accept the lowest or any Tender.

Office of Works, Maltby-street, 7th May, 1856.

NEW BAPTIST CHAPEL, NEWPORT.—TO BUILDERS.—The Committee are desirous of ATTENDERING for the ERECTION of a NEW CHAPEL for the congregation of Baptists at Newport, Monmouthshire, upon a piece of ground recently purchased at the Others of Mr. Gardner, in the centre of the Commercial Road, Newport. Tenders to be delivered at the Office of the Architect, Mr. GEO. H. DREW, Maltby-street, Bermondsey, on or before SIX o'clock on THURSDAY, the 22nd instant. The Committee do not bind themselves to accept the lowest Tender.

E. G. THOMAS Architect Newport, Monmouthshire.

N.B. Quantities will be furnished.

HART AND SON,

IRONMONGERS AND MANUFACTURERS,

53, 54, 55, & 57, WYCH-STREET, STRAND, London

LOCKS, HINGES, LATCHES, &c.

First-class Prize Medal, Paris Exhibition, 1855.

Illustrated Price-catalogue, post free on application.

MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can, at all times, deliver with little notice. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

WOOD CUTTING MACHINERY.

JOHN McDOWALL and SONS,

WALKINSHAW FOUNDRY, PAISLEY, near Glasgow,

MANUFACTURERS of VERTICAL SAW-FRAMES (driven by straps),

For cutting balks of timber, from 9 feet on the side down to the smallest deal frame.

Patent vertical saw-frames, of the foregoing dimensions, with steam power attached; circular re-saws; radial sawing machines; patent moveable ditto; patent horizontal cross-cut sawing machines, for heavy timber; planing machines, for working boards from 24 of an inch thick to 6-inch deck plank; revolving planers, for squaring and shaping heavy timbers, as used by ship-builders, &c.; patent curvilinear sawing machines, for circles, sweeps, and irregular cutting, well adapted for ship-builders; power tenoning and tenoning machines, moulding machines, single and double; veneer mills of all sizes, with all appendages; scale-board machines, for bat-boxes, &c.; patent silent feed motions for saw-frames; and every description of machinery for cutting and shaping timber, all constructed of iron, of the best materials, and first-class workmanship. Mr. McDowall has been in the engineering and millwright business for upwards of 30 years, but during the last 24 years he has devoted his attention particularly to the manufacture of wood-cutting machinery, as evinced by the numerous patents he has obtained for its improvement, and by the extensive orders his firm has been favoured with from the British and other European governments and private establishments in almost all parts of the world; and from their large and commodious premises, and first-class plant made for every department of the work without regard to cost, the largest contracts can be executed with a regularity, accuracy, and despatch, which cannot be excelled. Applications for prices, &c., will be promptly attended to.

WROUGHT-IRON STANDARD HURDLE FENCING for SALE, in lengths 7 feet, 6 feet, and 5 feet 6 inches, 4 feet 6 inches, and 4 feet high, and 3 feet 6 inches high. WROUGHT-IRON STANDARD HURDLE RAILING, 4 feet 6 inches high, 7 feet long, with 3 rails of best Staffordshire Iron (new). Two thousand. Apply to Mr. NEWMAN, on the Estate; or to GEORGE MORGAN, Esq., 3, Princes-place, Strand.

TO RAILWAY CONTRACTORS.—TEMPORARY SLEEPERS for SALE. The advertiser can cut down a large number of Scotch Fir Temporary Sleepers, and deliver them at the Railway Station at Godstone, Surrey, in complete lots of 1,000 and upwards. Address, X. B. Post-office, Cambridge.

AUSTIN'S IMPERIAL.

PATENT SASH and BLIND LINE can be obtained of all ROPEMAKERS IN ENGLAND, FOREIGN PORTS AND WHOLESALE HOUSES, IN TOWN OR COUNTRY

Established 1774

IRON CHURCHES, STORES, &c.—For SALE, Substantial Corrugated Iron Stores, Churches, Dwelling-houses, and every description of Buildings, adapted to all climates. Iron Roofs constructed for all parts of the world. An Iron Church with sittings for 750 people for immediate sale. To view and for further particulars apply to SAMUEL HEMMING, Clift House Works, Bow, London.

HENRY FROST begs to call the attention of Architects, Builders, and the Public to the IMPERISHABLE IRON WATER TANKS, the cheapest most wholesome, and portable article manufactured, free from all pernicious matters so abounding in lead cisterns. Made to order at 7d. per gallon.

N.B Can be made in flat plates, to screw together, for the country or exportation.

Sole Agent: HENRY FROST, 17, Bathbone place.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and late experiments have been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the strongest resistance to strain and pressure being secured, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection on this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent.—Mr. BARRETT, 12, York-buildings, Adelphi.

KITCHEN RANGES.—The IMPROVED PATENT LEAMINGTON KITCHENER, with large Hot-plate Pan and Sliding Ovens, &c.—For Price Lists, &c., apply to CHARLES SLOWNDES, Manufacturer, Exmouth Foundry, Leamington, or to Messrs. SLACK, Ironmongers, 336, Strand, London, where one may be seen in action.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE, the invention of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the store and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. opening to the Monument, London Bridge. Est. about A.D. 17—.

BATHS and HOT-WATER APPARATUS. J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c., to be had on application. Estimates and Plans for fitting up TYLOR and SONS, Manufacturers, Warwick-lane, Newgate-street, London.

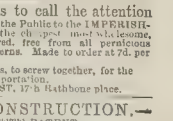
RANGES.—The PATENT WORCESTERSHIRE RANGE, Manufactured exclusively by JONES, ROWE, and PERKINS, Worcester. Also to be obtained through the agency of any respectable ironmonger.

"A more economical arrangement for fuel in the accomplishment of a great deal by small means, or a more compact contrivance for cooking at once all the courses necessary for a dinner, was probably never made."—Morning Herald, March 15, 1856.

Illustrations of Ranges forwarded upon application.

HEATING BY  HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be effectually warmed by Hot Water. JOHN WEEKS and CO. can refer to innumerable references of Churches, Dwelling-houses, Warehouses, &c., where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.



STEAM BOILERS of every description, Wrought-iron Girder Bridges, Gas-holders and Gas Apparatus, general Castings, Chains, Cranes, Iron Roofs, and Contractors' Ironwork, manufactured by MACE and BUSSEY, Phœnix Works, Tividale, near Dudley.

London Office: 28, HATTON GARDEN.

ORMOLU STOVES. — KEITH and McGEORGE, solicit the attention of Builders, &c. to their STOCK of STOVES, a large assortment always on hand, cheaper than any wholesale house in London, for cash. Bright and Ormolu Registers, with two sets of bars, first quality, from 4l. to be had only at KEITH and McGEORGE'S, Ironmongers and Kitchen-Fitters, 30, Piccadilly, opposite St. James's Church. Established 1817.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trades to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Best Pale Cut Chip and Rose.

½	¾	1	1¼	1½	3-in. & larger.
16s. 6d.	16s. 6d.	13s. 6d.	16s. 6d.	19s.	14s. per cwt.

And every article in proportion. Japanned tea trays, tea urns, tea kettles, and brass-founders' work of every description.

List of Prices had on application at the warehouse, or by letter prepaid.

SAVING IN GAS.—D. HULETT, INVENTOR and PATENTEE.—The Mercurial Governor is the only self-acting apparatus for obtaining wholesome and uniform lighting, equalizing the pressure, and preventing the escape of gas in the event of the extinction of the flame.—D. HULETT and CO. 85, High Holborn, London, Manufacturers of gas meters, governors, &c.

TO ARCHITECTS, &c.—The IMPROVED SELF-ACTING WATER-BAR for FRENCH CASEMENTS, the best and most efficient yet invented, is made by T. SMITH, of 14, Queen street, Oxford-street, near Argyll-street, where a working model can be seen or will be sent for inspection on receipt of card.

N.B.—Espagnolette Bolts of a superior quality, at reduced prices.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

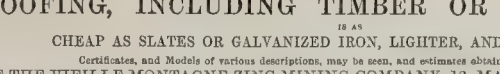
THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

TYERMAN'S PATENT HOOP-IRON BOND,



FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

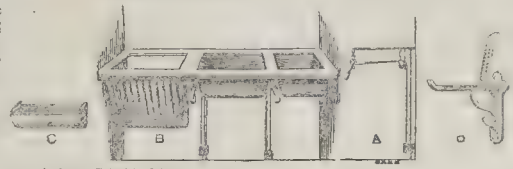
TARIFF OF PRICES

Beyond the current Price of Hoop-iron.

Gauge.	In. wide.	Per 1,000 ft.
No. 16 ..	1¼ ..	7s. 0d.
15 ..	1½ ..	7s. 9d.
13 ..	1¾ ..	8s. 6d.
15 ..	2 ..	8s. 6d.
13 ..	2½ ..	9s. 6d.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 11½ inches, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming REVERSED CLAWS, which are so bent that each end gram of the iron is presented longitudinally, and which become, when built into the brick-work, embedded in the structure, by which means a COMPLETE and PERFECT DETAIL TIE throughout the whole building is obtained.

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.



London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, to which they have made important additions, the many features of the same being explained in the following description and Engraving.

A represents the Patent Halter-guide and Collar-rein, the ball of which is taken to the back of the manger-works with freedom and ease up or down the guide-bar, and is noiseless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are clearly in appearance, durable, and impervious to infection. The Manufacture plain, glass or enamelled.

IMPROVED SURFACE-DRAIN, with safety Gratings; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

The New Illustrated Catalogue for 1856 gratis on application. Estimates and Designs.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 1s.—55 and 56, High Holborn.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.

14, Strand, London.

67, Hope-street, Glasgow.

27, Dale-street, Manchester.

GARDNER'S PATENT SMOKE CONSUMING APPARATUS may be seen in successful operation in many places. Saves 30 per cent. fuel, and is entirely new. A Mr. Woodcock having made assertions affecting this patent, the patentee will perfectly satisfy all parties of the incorrectness of such statements.—24, Norfolk-street, Middlesex Hospital; or to the Makers, Messrs. BUIDEG and HEALEY, 118, Dorset-street, Fleet-street

WOODCOCK'S PATENT SMOKE-CONSUMER.—The above Patent has a reputation beyond all question: it prevents smoke, saves fuel, promotes a rapid and abundant generation of steam, is entirely self-acting, and of small cost. Ample references and testimonials. Furnaces built on scientific and economical principles, and repairs or annual contracts for the same taken.—W. WOODCOCK, Consulting Engineer for Furnaces, 12, Bishopsgate-street Within, London.
CAUTION.—Gardner's so called Patent is an infringement of the above, and all parties are hereby warned against its use.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

FENDERS, STOVES, and FIRE-IRONS.—Buyers of the above are requested, before finally deciding to visit WILLIAM S. BURTON'S SHOW-ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, FIRE-IRONS, and GENERAL IRONMONGERY as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments and two sets of bars, 2l. 14s. to 6l. 10s.; ditto, with ormolu ornaments and two sets of bars, 5l. 10s. to 12l. 12s.; bronzed fenders complete, with standards, from 7s. to 3l.; steel fenders, from 2l. 12s. to 6l.; ditto, with ormolu ornaments, from 2l. 15s. to 7l. 7s.; fire irons, from 1s. 9d. the set to 4l. 4s. Sylvester and all other patent stoves, with radiating hearth-plates. All which he is enabled to sell at these very reduced charges.
Firstly, From the frequency and extent of his purchases; and
Secondly, From those purchases being made exclusively for cash.

GASELIERS in GLASS or METAL.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers in the metal glass all that is new and in choice in BRACKETS, PENDANTS, and CHANDELIERS, adapted to offices, passages, and dwelling-rooms, as well as to have some designs expressly made for these ARE ON SHOW over his SIXTEEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at the lowest price with those which have tended to make his establishment the largest and most remarkable in the kingdom—viz. from 15s. 6d. (two light) to 10l. 10s.
The alterations and additions to these extensive premises already by far the largest in Europe), which occupied the whole of last year, are of such a character that the entire of EIGHT HOUSES is devoted to the display of the most magnificent stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver, Plated Goods, Baths, Brushes and Turnery, Lamps and Gaseliers, Iron and Brass, Bedsteads and Bedding), so arranged in Sixteen Large Show rooms as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere.
Illustrated catalogues sent (per post) free.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bunhill-row, London, where a great variety are always on view for churches, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ten weight moving with these hinges as easily as a bucket. Ornamental hinges adapted for drawing-rooms, &c.; doors hitherto with them may be removed and replaced in an instant. Rising and double acting spring hinges, and supreme gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

KIMBERLEY'S NEW PATENT FLOOR-ING CRAMP continues to receive the patronage one and all, of every leading Builder, Engineer, and Architect, not only in England, but throughout the world. Its simplicity, power, and economy still remain unquestionable, even by the side of its most important rivals, and the steady, annual increase in its sales is the best proof of it. It is useful in many ways as a cramp, and unlimited evidence can be given that it is a most valuable tool, which no Builder should be without.

London Agents—Messrs. THOMAS PUGH & CO. Wholesale Ironmongers, 13 King-street, Snow-hill, London.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.
Manufacturers of Bar Iron, Railway Bars Forge and Engine Work, Cast-iron Goods, and

Terms cash on delivery.

FREESTONE.—Architects and Others are reminded that they can obtain the CASTERTON Freestone in blocks of any portable size, on applying to FRAS. and OCT. N. SIMPSON, Stamford. Specimens may be seen, and information obtained at the Offices of Messrs. PINDER, SIMPSON, and SON, 24, Saville-row, Burlington-gardens, London.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER.
Marble of all kinds and of best quality, in block and slab, Marble mortars, &c.

FOR MACADAMIZING ROADS.—The hardest and most durable STONE for ROAD-MAKING.—The Proprietor of an extensive Quarry just opened at Dungannon—a Rock containing BLUE ELVIN GRANITE, which makes little dirt or dust, and has been proved by hydraulic pressure to be 25 per cent. heavier than fourney Granite—is now open to contract to supply any quantity at the following low charges, delivered out of the vessel in the Thames:—Unbroken lumps, 8s. 6d. per ton; broken, 10s. per ton.—Apply to Mr. JOHN NEWTON, Norway Wharf, Hertford-road, Kingsland-basin.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

TO CONTRACTORS FOR PUBLIC AND OTHER WORKS.
THE HAYTOR GRANITE QUARRIES.
TO BE LET, with immediate possession, the need and valuable GRANITE QUARRIES of HAYTOR DOWN, in the parish of Ilsington, in the county of Devon; six miles from Chudleigh, six from Ashburton, eight from Newton-Abbot, where there is a railway-station, and twenty miles from Exeter. The Quarries are fully opened, and railroads communicate to each of them. They are known by the Old Quarry No 1, the New Level, working under the sole of No. 1, the No. 2 Quarry, and the magnificent Quarry called Holwell Tor, which are all in a capital state for immediate working to an unlimited extent. Stones of all scantling, from the smallest Kirb to the largest columns or blocks, may be got with the greatest facility. Annexed to the Works are an excellent Mill Power, workshops, and sheds, and, if required, several labourers' cottages. The stone is transported by means of a tram-road and canal to the port of Teignmouth.—For any further particulars, apply to the Duke of Somerset's Agent, Mr. BEARNE, at the Office, Teignmouth; Mr. Newton-Abbot, Devon; Mr. BEATEN, Teignmouth; or Mr. SOUTHEY, Haytor Down.

RAWDON-HILL STONE.—Messrs. TRICKETT and PERKIN are prepared to execute orders to any extent for their much-admired Building Stone Depôts, where large stocks are kept, No. 3, Stone-wharf, Great-Northern Railway Station, King's-cross; Victoria Stone-wharf, Millwall, Poplar. Blocks quarried to suit customers for columns, cornice, landings, steps, ledgers, headstones, cills, &c. Delivered to any part by vessel or railway trucks.
"This stone when better known, must come into extensive use; I should think it exceedingly suitable for the London market."
C. L. DUESBURY, F.G.S.
Address, JOHN TRICKETT, Headingley, Leeds, Yorkshire; or, SAMUEL TRICKETT, Victoria-wharf, Isle of Dogs, London.
N.B. A large quantity of Foundation Landings for sale.

YORKSHIRE STONE.
GEO. VINT and BROTHERS, IDLE, near LEEDS,
Beg to inform Architects, Surveyors, Contractors, Builders, and Masons, that they can supply to any extent all kinds of YORK STONE, including Paving, Bramley Fall, Park Spring, Robin Hood, Harehill, &c. of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts—Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf the above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST CLASS MEDALS:—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1846. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compare with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental slovers for kitchen ranges; plain and exquisitely decorated slabs for the tops of loo-tables, chiffoniers, consoles, &c.; baths, baptistries, altar tablets, pilasters, columns, vases, pedestals, and brackets; washstand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts for home and abroad.

GREEN SLATE.—The Green Slate produced from the Tyn-y-Werlodd Quarries, has been pronounced superior in colour, grain and cleavage, to any hitherto used. Blue and Purple Slate of the best description.—Apply to Mr. GOLLVER, Builder's-court, Old Broad-street, where samples may be seen; or to Mr. JENNINGS, Penygroes, near Carnarvon.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.
ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 25s. to 30 guineas. Slate Cisterns made to any size.—J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex.

TO CAPITALISTS.—Capitalists are invited to INSPECT one of the finest and most perfect SLATE FORMATIONS now existing in the Principality, combining an area upwards of one hundred acres in extent, of the most solid material, ready to be quarried, and certainly not to be surpassed. The quarry can be reached by rail in nine hours from the metropolis, and is only distant seven miles from the South Wales Railway. As the process of manufacture, the cost of the Slate, solely through the operation of machinery, are cut by pressure, and consequently by this mode the Laminæ is exempt from flaw or fracture. Specimens of the material will be transmitted to any party who may require them by receiving their address. If after a survey of the quarry, there should be a disposition to treat with the proprietor for the working of the Mine upon an extensive scale, a satisfactory reference would be required.—Address to the Proprietor, Summerton Slate Quarry, Scetterston, Haverfordwest. Specimens to be seen at the Office of "The Builder."

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

				100	

The Author will endeavour in the several chapters to define the apparent origin and trace the development of the several styles of Ornament. He will proceed to ascertain the laws which govern their construction, both those which are general to all styles and those which are peculiar to each. He will further attempt in the special chapter to show how beneficial to mind these general laws which he finds also to pervade the whole of Nature, may prove and determine to her for fresh inspiration, we may yet go forward; and, whilst availing ourselves of the experience of all time, may be enabled to [illegible] to bring a work out of the times instead of humbly following some of the past.

The present state of the case amongst Ornamentalists has been the subject of many years. On the one side giving it forth to the world the Author fully feels the difficulty of the task he has undertaken; he trusts, nevertheless, that with the collection, arrangement, and classification of the decorative arts, will have before them an amount of material which does not elsewhere exist in any such convenient form, and in the use of which it will be his endeavour to serve them as a guide.

N.B. The Letterpress will appear at intervals during the progress of the Work. Size, 8vo. royal.

Published by DAY and SON, LITHOGRAPHERS to the QUEEN, 6, GATE-STREET, LINCOLN'S-INN-FIELDS.

For prospectuses, &c. apply to Messrs. HYDE, SMITH, and LEWIS, at the Offices, 24, Guildford-street, Russell-square.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural, Civil Engineering, and Mechanical Drawing; Colouring, Shading and Tinting; Ornamental and Water-Colour Drawing; Perspective, Isometrical, and Geometrical Drawing, Making, Finished and Working Drawings; Preparing Specifications, Taking out Quantities, Estimating, Measuring and Valuing Builders' Work, &c. &c. Terms.—Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter. There are no extras, the terms include the whole of the above, with the use of Drawing Boards, T Squares, Plans, Drawings, Models, Specifications, and full particulars may be had at the Offices, 24, Guildford-street, Russell-square.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

N.B. A few New and Second-hand Levels and Theodolites always for Sale.

THE T SQUARE INVENTED and MANUFACTURED by Messrs. STANLEY and ROBINSON, of 3, Great Turnstile, Holborn, and recommended in "The Builder," April 5th, and the "Practical Mechanic's Journal" for this month, possesses many advantages over any other T square, and is now coming into general use in all the principal offices in the kingdom.—42-inch, 7s. 6d.; 36-inch, 6s. 6d.; 30-inch, 5s. 6d.; 24-inch, 4s. 6d.

The Builder.

VOL. XIV.—No. 692.

SELDOM has the first Monday in May, which brings with it the opening of the Exhibition of the Royal Academy, been looked for more anxiously than on the present occasion. It has come and gone. The impatient crowd who stood without have been admitted within the walls of the Academy, and the doings there for another year are no longer a mystery. The multitude who have rushed between its portals comprise not only every member of the profession, and every hanger-on to it, but a crowd of those who are interested in art from various motives and causes, and who either do or do not realize its importance as one of the elements of our civilization, and as one of the great instrumentalities by which the present age is to be influenced and impressed.

Within its doors there has been the usual visiting of wealthy patrons and favoured guests; the usual interchange of courtesy and compliment between the members themselves; while without, there have been the accustomed murmurs of discontent and dissatisfaction; the usual heart-breakings and disappointments amongst the young members of the profession, who had laboured and hoped for better treatment at the hands of those to whom they have to commit the destinies of their professional year than they have received. But if we mistake not, with much that is usual and customary, there is this year something unusual and extraordinary too, if we may judge from the number and *weight* of the complainants whose statements have reached our ears. It will be but fair to the hanging committee themselves, to let them know the feelings that prevail, and we will print, therefore, part of a communication from a very estimable artist, without necessarily adopting all the opinions contained in it.

"The magnificent exhibition in Paris last year," says the writer, "of the choicest works of the various schools of Europe, was looked upon by intelligent and earnest critics as calculated to inspire the artists of our school with new energy, vigour, and freshness; and to infuse life and purpose into the next collection of their works that should be submitted to public view. The time has come that we naturally ask, Where is the evidence of any such results? And after looking round the walls of the Royal Academy, 'Echo answers, Where?' Either the council and hangers of that body have been unfaithful to their trust, or the artists of Britain have arrived at that self-satisfied condition which renders them blind to the necessity of constant effort, and insensible to the advantages and opportunities which such a collection as that referred to was thought to afford them. That this latter conclusion is correct, we are altogether unwilling to admit, for on visiting the studios of painters previously to the sending in of the pictures, we were struck with abundant proofs of the earnest care and conscientiousness, the close observation of nature, and the deep thoughtfulness with which our younger artists especially had been working; and we do not hesitate to declare that their works, so viewed and contemplated, would have done honour to any school, in any age of the history of art. We look for them on the Academy walls: some are found in obscure corners and disparaging situations, while others are missing altogether. We press our inquiries into the reason of all this, and are told by those in authority that 'want of space' is the sole cause of these disastrous results, which we cannot but regard as destructive of all progress, and as tending to falsify the real character and condition of art in this country, not only in the estimation of those foreign artists and critics who in these days come over to judge us, but even in the estimation of the intelligent portion of our own population. If it be true (and it may be so in a great measure) that there is not room, as the President said in his speech on Saturday last, to do justice to the 'fellow-labourers' of Academicians, and to hang their works, it is a lamentable and disgraceful defect in the economy of a nation professing to lead the van in the great march of civilization,—that when her sons of genius have laboured to their utmost (often in the face of great difficulties and privation) to produce works of excellence, having pressed their way through the countless obstructions to their progress, incidental to their pursuit, they should at last be denied the simple justice of being fairly judged of by the public themselves.

But let us for a moment inquire how the Royal Academy act under a sense of the difficulty of which they complain. In the present collection, it is said, that 27 feet of the line are taken up by one member; as much by a second; about 30 feet by one associate, and nearly as much by another; and mainly, too, by works of a class much resembling each other, and not all tending to illustrate the high aim and purposes of art; while the works of striving men, out of the circle, are consigned to the cellar. Is it thus that art is to progress amongst us? Is it thus that England is to hold up her head among the schools of Europe, or to maintain her position as foremost among the patrons of the ennobling, and elevating, and refining arts of peace? Surely not: and it becomes a question of the highest moment to the artists themselves, whether they submit to a state of things so uncertain and so deceitful; or whether they cannot combine for action in such a way as to secure more certainty in the management of the public exhibition, which is nothing more than the fair opportunity of exposing to view what fair and intelligent means, and honest labour of mind and hand, have produced. Never had the artists of England a better opportunity than at present, of erecting, on a broad and comprehensive basis, a noble and abiding superstructure; for patronage is abundant; the interest felt in art is wide-spread and universal; and the call to them is, not to seize eagerly upon the offered rewards merely, but to aim at excellence, by increased care, and thought, and labour: and then, if it is asked, How are we to secure, for such devotion to art, a safe appreciation at the hands of our countrymen? the answer is, that bold and united efforts must be made to break down the long-established usages to which the Academy clings,—that its administration, so cramped and illiberal, must be made to adapt itself to the requirements of the age in which we live; — that it must be aroused from that lethargy which makes its onward movement so tardy; — or else that the large body of artists who stand without, must combine for their universal safety and success, and seek some means to take the tide of patronage while at its flood, hoping it may yet last long enough to bear them on to a permanent haven."

Notwithstanding the assertions of our correspondent, made under a feeling of personal injury, and our personal knowledge of the fact that many excellent pictures have been rejected, or otherwise ill-treated, to make way for pictures of less worth, we must still view the collection as one of much interest; calculated, it may be, to make some minds doubtful as to the future of English art, for a time, but on the whole hopeful and promising. Stanfield's picture, "The Abandoned" (94), is worth a pilgrimage: "The Last Parting of Marie Antoinette and her Son," by E. M. Ward (75), although inferior to his "Argyle" of a previous year, is worthy of any school: "Love's Labour Lost" (17) is to our mind the best picture Mr. F. R. Pickersgill has yet painted; and the same may be said of Elmore's, "The Emperor Charles V. at Yuste." Dobson has two admirable paintings, "The Parable of the Children in the Market-place" (310), and "The Prosperous Days of Job" (532). Sir Edwin Landseer's two pictures seem spoilt by the hanging,— (208) "Highland Nurses," has much touching beauty, which would be more felt if the picture were seen alone; and (35) "Home," by J. N. Paton, notwithstanding an excess of despair in the group, under the circumstances,—the entire absence of hope,—will be a point for admiration during the season.

Nor should (131) "Many Happy Returns of the Day," by W. P. Frith; (162), "The Graces," by W. E. Frost; (209), "A Passing Cloud," by J. C. Hook; (248), "Agua Fresca," by J. Phillip; (328), "Un Corillo Andaluz," by D. C. Gibson; (336), "Street Scene in Cairo," by John Lewis; (506), "Going to be Fed," by R. Ansdell and J. Phillips; (592), "Highland Mary," by T. Faed; or (610), "The Heir cast out of the Vineyard," by W. C. Thomas, be overlooked. Amongst the landscapes (503), "Summer Crops," by W. Linnell, holds an eminent position.

Mr. Leslie's "Hermione" (144), in a modern furred cloak,—the Hermione whose innocence was decided by the Delphic oracle,—is a mistake in the title; and Mr. Leighton, who gave such good promise last year, has gone astray this, in his *fiddling* Orpheus (508).

The artists who have adopted the manner of painting which has been termed pre-Raffaellite, appear to be increasing; at any rate, the number of specimens exhibited by them, mostly placed on the line, is much greater than on any previous occasion; nor is it to be wondered at, since the mere manner is comparatively easy of imitation, and has found eloquent advocates and liberal purchasers. Sir Charles Eastlake said at the dinner, that "while the office of the professed critic is, almost necessarily, to detect imperfections, the enlightened amateur, on the other hand, recognises the principle, founded on a long observation of masterworks, that a few qualities, or even one quality carried to a high degree of perfection, though involving comparative defects in other particulars, stamps the work of art with character and value, and seldom fails to command approbation. Among the great masters each is admired for certain special qualities, while the fact that he is deficient in other respects does not interfere with the general estimation in which he is held."

We fully admit the truth of this, and, appreciating the good qualities to be found in the works of the chiefs of the new school, have gladly offered on many occasions tributes of admiration. Their works as stages in a progress, — as reactionary from sloppy indistinctness, — have deserved the greatest encouragement; but if these are to be pointed to as final results to be striven after by other artists,—the manifest errors and shortcomings of the school set up as examples for imitation,—the progress of art in England will be seriously retarded. The absence of air in their pictures; the want of a feeling for the beautiful, if not determined avoidance of it, and the consequent selection of indifferent models for representation, must surely be regarded as defects, in *spite of which* they have by their ability in other respects produced pictures worthy of admiration, and not as amongst the means through which success is to be attained. Further, art, as it seems to us, does not consist alone in an imitation of nature. The artist has to produce on the minds of others by entirely different means the effect produced by nature on his own mind, and to do this, must look *into* his own mind, and set forth what he sees there: he must not paint each thing as it really is, separately viewed, but as it seems viewed in relation to what is about it

and beyond. Mr. Millais has five pictures in the present exhibition, all possessing high qualities, yet open to strong objection. His largest, "Peace Concluded, 1856" (260), is greatly disfigured by the costumes introduced, and is altogether inferior, as it seems to us, to some of his previous works. No. 413, a picture without a name in the catalogue, but which may be called, "The Cavalier and Roundhead," or "The Duel," and is attributed to Mr. Burton, is an earnest and interesting painting, wanting, chiefly, in atmosphere. "The Scapegoat" (398), by Mr. Holman Hunt, is a work of remarkable power, but a very disagreeable picture: the number of its admirers will be few, but then these admirers will probably be worshippers.

FIRES: THE BEST MEANS OF PREVENTING AND ARRESTING THEM; WITH A FEW WORDS ON FIRE-PROOF STRUCTURES.*

I have been requested by the Council of the Society of Arts to send them some information as to "Fires; the best means of preventing and arresting them; with a few words on fire-proof structures." It is with great diffidence that I attempt a subject of such importance to the community, not only from my inability to do it justice in writing, but from the excessive difficulty of making each person comprehend the necessity of being sufficiently careful, due care being the best prevention against fire, as well as against many other evils.

To prevent fires, it is necessary to consider what are the principal causes of these calamities. These may be classed under several heads:—

1. Inattention in the use of fires and lights.
2. Improper construction of buildings, &c.
3. Furnaces or close fires for heating buildings, or for mechanical purposes.
4. Spontaneous ignition.
5. Incendiarism.

There is little to be said on the first head which is not well known to most masters of houses or other establishments, but the difficulty is to keep up their attention or that of those under them. * * * * *

The improper construction of buildings more generally assists the spread than is the original cause of fires, although laying hearths on timber, and placing timber too near flues, are constant causes of fire; and it is believed that many melancholy occurrences have arisen from these and similar sources. It is true the Building Act forbids all such proceedings, but the district surveyors do not seem to have sufficient power, or be able to pay sufficient attention to such matters, as they are constantly met with at fires. A very flagrant case of laying a hearth on timber was lately exposed by a fire in the City. Due notice was given of the circumstance, but no further attention was paid to the matter than to make the proprietor construct the floor properly, although the Act gave power to fine for such neglect. This omission is to be regretted, as there could not have been a better case for warning others, as it occurred in a very large establishment, and the work was done by one of the first builders in the City. Had this fire taken place in the night, and gained some head, it would have been very difficult to have ascertained the cause. As the premises were situated, a serious loss of life might have occurred, the apartment in which the fire originated being the only means of retreat which ten or twelve female servants had from their bed-rooms.

The Building Acts, up to about the year 1825, by insisting upon party-walls and other precautions, were invaluable for the prevention of the spread of fires. By them no warehouse was permitted to exceed a certain area. From the year 1842 the area has been exchanged for a specified number of cubic feet. But since 1825 a class of buildings has arisen of which there are now considerable numbers in the City, called Manchester or piece-goods warehouses, which somehow, up to the 1st of January last, have been exempted from the law restricting the extent of warehouses, on the plea that they are *not* warehouses, because "bulk is broken" in them, although it is thoroughly understood that the Legislature intended by the Act to restrict the amassing such a quantity of goods under one roof as would be dangerous to the neighbourhood.

It is necessary to state here, that the intensity of a fire, and the risk of its extending to other buildings, depends, *ceteris paribus*, on the cubic contents of the building which takes fire. Manchester and piece-goods warehouses have for some time past been built of unlimited size, sometimes equal to twenty average houses. This is pretty nearly the same as if that number of houses were built without party-walls, only that it is much worse, for the whole mass generally communicates by well-holes and open staircases, and thus takes fire with great rapidity; and, from the quantity of fresh air within the building, the fire makes much greater progress before it is discovered. By this means the risk of fire in the City has been greatly increased, not only to such warehouses themselves, but to the surrounding neighbourhoods; for it is impossible to say how far fires of such magnitude may extend their ravages under untoward circumstances, there being at present no preventive power in London capable of controlling them. To provide such a power would be a very costly business.

It is also against the generally received rule, that a man may burn himself and his own property, but he shall not unduly risk the lives and property of his neighbours.

The Building Act, which became law on the 1st January last, is likely to repress, to a certain extent, this great evil, unless its meaning be subverted by some such subterfuge as destroyed the efficiency of the last one. But what is to be done with those which are already built? It may seem tedious to dwell so much on this subject, but it appears to be a risk which is not generally much thought of, though it is of the most vital importance to the safety of London. It is very desirable that the metropolis should take warning by the experience of Liverpool, without going through the fiery ordeal which the latter city did.

From 1838 to 1843, 776,762*l.* were lost in Liverpool by fire, almost entirely in the warehouse risks. The consequence was, that the mercantile rates of insurance gradually rose from about 8s. per cent. to 30s. 40s. and, it is said, in some cases, to 45s. per cent. Such premiums could not be paid on wholesale transactions, therefore the Liverpool people themselves obtained an Act of Parliament, 6 and 7 Vict. cap. 109, by which the size and height of warehouses was restricted, party walls were made imperative, and warehouses were not allowed to be erected within 36 feet of any other warehouse, unless the whole of the doors and window-shutters were made of *wrought iron*, with many similar restrictions. This Act applied to warehouses already built, as well as to those to be built; and any tenant was at liberty, after notice to his landlord, to alter his warehouse according to the Act, and to stop his rent till the expense was paid. Another Act, 6 and 7 Vict. cap. 75, was also obtained, for bringing water into Liverpool for the purpose of extinguishing fires and watering the streets *only*. It is supposed that the works directed, or permitted, by these two Acts, cost the people of Liverpool from 200,000 to 300,000*l.* Shortly after these alterations had been made, the mercantile premiums again fell to about 8s. per cent.

There is another very common cause of fire, which seems to come under the head of construction, viz. covering up a fireplace, when not in use, with wood or paper and canvass, &c. The soot falls into the fireplace, either from the flue itself, or from an adjoining one which communicates with it. A neighbouring chimney takes fire: a spark falls down the blocked-up flue; sets fire to the soot in the fireplace, which smoulders till the covering is burnt through, and thus sets fire to the premises.

The danger from furnaces or close fires, whether for heating, cooking, or manufacturing purposes, is very great, and no flue should be permitted to be so used, unless it is prepared for the purpose. The reason is, that in a close fire the whole of the draught must pass through the fire. It thus becomes so heated that, unless the flue is properly built, it is dangerous throughout its whole course. In one instance of a heating furnace, the heat in the flue was found to be 300°, at a distance of from 40 feet to 50 feet from the fire. In open fireplaces the quantity of cold air carried up with the draught keeps the flue at a moderate heat, from the fire upwards; and unless the flue is allowed to become foul, and take fire, this is the safest possible mode of heating.

Heating by hot air, steam, and hot water are objectionable. First, because there must be a furnace and furnace-flue, and the flue used is generally that built for an open fire only. And, second, the pipes are carried in every direction, to be as much out of sight as possible. By this means they are constantly liable to produce spontaneous ignition, for there appears to be some chemical action between heated iron and timber, by which fire is generated at a much lower temperature than is necessary to ignite timber under ordinary circumstances. No satisfactory explanation of this fact has yet been given, but there is abundant proof that such is the case. In heating by hot-water pipes, those hermetically sealed are by far the most dangerous, as the strength of the pipes to resist the pressure is the only limit of the heat to which the water, and of course the pipes, may be raised. In some cases a plug of metal which fuses at 400° is put into the pipes, but the heat to which the plug is exposed will depend very much on where it is placed, as, however great may be the heat of the exit-pipe, the return-pipe is comparatively cool. But even where the pipes are left open, the heat of the water at the furnace is not necessarily 212°. It is almost needless to say that 212° is the heat of boiling water under the pressure of one atmosphere only; but if the pipes are carried 60 or 70 feet high, the water in the furnace must be under the pressure of nearer three atmospheres than one, and therefore the heat will be proportionately increased. Fires from pipes for heating by hot water have been known to take place within twenty-four hours after first heating, and some after ten years of apparent safety.

The New Building Act prescribes rules for the placing steam, hot-air, and hot-water pipes at a certain distance from timber; but as it must be extremely difficult for the district surveyors to watch such minute proceedings, it becomes every one who is anxious for safety to see that the district surveyors have due notice of any operation of this kind.

Another cause of fire which may come under this head is, the use of pipes for conveying away the products of combustion. Every one is acquainted with the danger of stove-pipes, but all are not, perhaps, aware that pipes for conveying away the heat and effluvia from gas-burners are also very dangerous, when placed near timber. It is not an uncommon practice to convey such pipes between the ceiling and the flooring of the floor above. This is highly dangerous. Gas-burners are also dangerous when placed near a ceiling. A remarkable instance of this took place lately, where a gas-burner set fire to a ceiling 28½ inches from it.

Another evil of furnaces is, that the original fireplace is sometimes not large enough to contain the apparatus, and the party-wall is cut into. A most melancholy loss of life took place from this cause last winter. Perhaps it may be necessary to notice at this point the use of gas, as it is becoming so very general. Gas, if carefully laid on, and properly used, is safer than any other light, so far as actually setting fire to anything goes; but the greater heat given out so dries up any combustibles within its reach, that it prepares them for burning; and, when a fire does take place, the destruction is much more rapid than in a building lighted by other means. Gas-stoves also, from the great heat given out, sometimes cause serious accidents: in one instance, a gas-stove set fire to a beam through a two-and-half-inch York landing, well bedded in mortar, although the lights were 5 or 6 inches above the stone. This is mentioned to show that gas-stoves require quite as much care as common fires. The heat given out by the gas also increases very much the risk of spontaneous ignition.

* From a paper by Mr. James Braidwood, read at the Society of Arts on the 7th inst.

This is believed to be a very fruitful cause of fires; but unless the fire is discovered almost at the commencement, it is difficult to ascertain positively that spontaneous ignition has been the cause. Spontaneous ignition is generally accelerated by natural or artificial heat. For instance, where substances liable to spontaneous ignition, are exposed to the heat of the sun, to furnace flues, heated pipes, or are placed over apartments lighted by gas, the process of ignition proceeds much more rapidly than when in a cooler atmosphere. Sawdust in contact with vegetable oil is very likely to take fire. Cotton, cotton waste, hemp, and most other vegetable substances, are alike dangerous. In one case, oil and sawdust took fire within sixteen hours: in others, the same materials have lain for years, until some external heat has been applied to them. The greater number of the serious fires which take place in railroad stations in and near London, have commenced in the paint-stores. In a very large fire in an oil warehouse, a quantity of oil was spilt the day before, and wiped up, the wipings being thrown aside. This was believed to have been the cause of the fire, but direct proof could not be obtained. Dust-bins, also, very often cause serious accidents. In one instance, 30,000*l.* to 40,000*l.* were lost, apparently from hot ashes being thrown into a dust-bin.

These accidents may in a great measure be avoided by constant care and attention to cleanliness, and where paints and oils are necessary, by keeping them in some place outside the principal buildings. Dust-bins should, as much as possible, be placed in the open air, and where that cannot be done, they should be emptied once a day. No collections of rubbish or lumber of any sort should be allowed to be made in any building of value. * * *

"What is Fire-proof Construction?" is a question which has given rise to a great deal of discussion, simply, as it appears to me, because the size of the buildings and the quantity and description of the contents have not always been taken into account. That which may be perfectly fire-proof in a dwelling-house, may be the weakest in a large warehouse. Suppose an average size dwelling-house 20 × 40 × 50 = 40,000 cubic feet, built with brick partitions, stone or slate stairs, wrought-iron joists filled in with concrete, and the whole well plastered. Such a house will be practically fire-proof, because there is no probability that the furniture and flooring in any one room would make fire enough to communicate to another. But suppose a warehouse equal to twenty such houses, with floors completely open, supported by cast-iron pillars, and each floor communicating with the others by open staircases and wells: suppose, further, that it is half filled with combustible goods, and perhaps the walls and ceilings lined with timber. Now, if a fire takes place below, the moment it bursts through the upper windows or skylights the whole place becomes an immense blast furnace; the iron is melted; and, in a comparatively short time, the whole place is in ruins, and it may be the half of the neighbourhood destroyed. The real fire-proof construction for such buildings are groined brick arches, supported on brick pillars only. This mode of building, however, involves so much expense, and occupies so much space, that it cannot be used with advantage. The next best plan is to build the warehouses in compartments of moderate size, divided by party-walls and double wrought-iron doors, so that if one of these compartments take fire, there may be a reasonable prospect of confining the fire to that compartment only. Again, cast iron gives way from so many different causes, that it is impossible to calculate when it will give way. The castings may have flaws in them; or they may be too weak for the weight they have to support, being sometimes within 10 per cent. or less of the breaking weight. The expansion of the girders may thrust out the side walls. For instance, suppose in a warehouse 120 feet × 75 feet × 80 feet, there are three continuous rows of girders on each floor, with butt joints: the expansion in this case may be 12 inches. The tie-rods to take the strain of the flat arches must expand and become useless, and the whole of the lateral strain be thrown on the girders and side walls, perhaps weak enough already. Again, throwing cold water on the heated iron may cause an immediate fracture. For these and similar reasons, the firemen are not permitted to go into warehouses supported by iron, *when once fairly on fire*.

The effect of fire on cast iron, as stated by Mr. Fairbairn, F.R.S. of Manchester (7th report of the British Association, 1837, vol. 6, p. 409), is, that the loss of strength in cold blast cast iron, in a variation of temperature of from 26° to 190° = 164° Fahr. is 10 per cent. and in hot blast, at a variation of from 21° to 169° Fahr. is 15 per cent. Now, if the loss of strength advances in anything like this ratio, the iron will be totally useless as a support long before the fusing point is attained.

It is sincerely to be hoped that the clause in the new Building Act, restricting the size of warehouses, may be more successful than its predecessor, for it is not only property that is at stake, but human life. In many of these "Manchester warehouses," there are fifty, or 100 and upwards, of warehousemen and servants sleeping in the upper floors, whose escape in case of fire would be very doubtful, to say the least of it.

Covering timber with sheet iron is very often resorted to as a protection against fire; but Dr. Faraday, Professor Brande, Dr. D. B. Reid, and Mr. W. Tite, M.P. are of opinion that it may be useful against a sudden burst of flame, but that it is worse than useless against a continued heat. Even cast-iron, 1 inch thick, laid on tiles, and cement 3 inches thick, has allowed fire to pass through both, to the boarding and joisting below, merely from the fire in an open fireplace being taken off, and laid on the hearth. This arises from iron being so good a conductor, that, when heat is applied to it, it becomes in a very short time nearly as hot on the one side as the other. If the smoke escapes up a chimney, or in any other way, there may be a serious amount of fire before it is noticed.

GALWAY AND ITS RESOURCES.

As to the health and well-being of the inhabitants, and the superficial appearance of the land, no country has been more suddenly revolutionized than this: whole districts of mountain, morass, and waste have been reclaimed; large estates of fertile acres, ill cultivated, have been restored to the sickle and the scythe; mansions, neglected or tottering, have been repaired and occupied; and the peasantry, once steeped in indolence, flaunting in rags, and a prey to famine, have been rescued from the fell influences which appeared to overpower resistance.

Theorists, moralists, jurists, and religionists might have tried, and tried in vain, to effect that which has only resulted, and could alone result, from the decrees of an all-wise Providence. Famine desolated the country, then disease, then the exodus—the progression was in due course. Mankind saw it, and were appalled; but it was the working of a Supreme Law under which the land recovered from the visitation, yielding again, from well-stored garners, supplies to many nations: so has Ireland become resuscitated, and arisen refreshed from the chastening.

Manufactures are, it is true, but feebly carried on; the northern province asserting herein its supremacy; the linen trade is theirs: an unequal share of the commerce of the island is also claimed by the flourishing town of Belfast. Yet there are circumstances which adapt other sea-ports for foreign trade, and which must hereafter realise for them that wealth and importance for which noble harbours, and the most felicitous maritime position are so well calculated.

Cork, in the south—the key to the great Atlantic—with a harbour most obvious and easy of access, open to the commerce of Southern Europe and of all the oceans; Galway, in the west, directly opposite to the giant Republic—this port and harbour are surpassed by none. To both these towns railways have been some years in action; and the consequent results of increased population and commerce are daily becoming more evident: added to this, improving cultivation of the counties vicinal to both, stimulate their advance from shire towns to incipient cities of cathedrals, colleges, and commerce.

Few localities possess the water-power of Galway; with a flood for a hundred mills, not a hundred hands are employed; with fishing-grounds for a thousand barques, 100 smacks troll listlessly, *three days in the week*; such were the old habitudes. They are entering upon new phases of regulation, and efforts are at last being made to bring the treasures of the deep to the aid of industry; for "they have but to cast in the net."

What cannot be changed, is the natural advantages of these great sea-ports; their mines and minerals, metals and marbles; the unsurpassed fertility of rich deep tillage; the exhaustless reproduction of pastures peculiar to the Emerald Isle. Truly, nature has enriched this favoured land; the hand of man is but of late directed to its cultivation: thus agriculture will advance, and is advancing; commerce is of slower growth,—it wants the staple of manufacture for the supply of return cargoes.

Could the cloths of Leeds and Manchester, the cutlery of Sheffield, the porcelain of Staffordshire, or any of the industrial products of England's endless factories, find in Galway a mart for sale equal to the free issue for embarkation, what American trader would drive up channel (a protracted voyage of days), and face the sinuosities and perplexities of uncertain seas, to interchange commodities with Bristol or Liverpool?

Time, and the changes it effects, will yet confer upon Galway a rank never aspired to by its Milesian settlers, or their descendants. The fluctuating influences of trade, ever prone to new vagaries, may, as they pitched upon the uninviting, sandy, and portless beach of New South Wales, yet fix an emporium on this (formerly most remote) part of the 'ultima Thule.'

At present there is little of a commercial nature in Galway, to raise it suddenly from its former character of a county town, except that the railway brings an access of occupants for its ancient Spanish structures, and pours in with its electric wires the spirit of enterprise in support of spreading agricultural improvements.

The exhaustless quarries of marble, pre-eminent for colour and variety, are also a source of prosperity: that, which was until very lately unwrought, is daily being turned to account. The Messrs. Franklin, of London, first imported the great varieties abounding in these rich quarries. Blocks of colossal dimensions, green mixed and streaked with yellow (either colour predominating, as required), black, and porphyritic marbles, are now regularly shipped to London and other ports; and, as before hinted in the *Builder*, it is somewhat unaccountable that these exquisite building-materials are not more extensively used by architects in Ashlar facings, and *polished*. Any desired colours and shades could be had. The labour of polishing could be done at the quarry, for a comparatively low cost; and the beautiful example of the Conservative Club columns, in Pall-mall, must evidence to every tasteful eye, how valuable, how inappreciable, would be this smoke-resisting surface and material for the dusky atmosphere of Old King Coal.

In the great metropolis but one of four fronts (and that more commonly the smaller) is presented to view. When the expense of ornate sculpture is taken into account, the polishing of a superficies being only one quarter of the elevation, could not be costly,—the lightness, the brightness, if not the novelty (and it must be ever new), would repay.

Additional to these elements of wealth, Galway possesses docks of a magnitude far beyond its present requirements; and an extensive harbour and bay, capable of sheltering the British fleet. Locked by headlands, and protected by the Isle of Arran, steamers from America will one day find here a direct point of intercommunication by rail to Dublin, and thence by Holyhead to London in sixteen hours!

Like all the old borough towns of *Old* Ireland, there is a gigantic gaol!—now happily used more as a reformatory than retributive criminal penitentiary. This is surrounded by gardens, which contribute to the instruction and improvement of probationary prisoners. But the

Queen's College,—a university endowed and chartered by Government, having privileges equal to Trinity College, conferring degrees in arts, medicine, and laws,—assures, at the same time, education of the first class to the rising generation of the province of Connaught, and the prospect of improved value, and rising consequence to the provincial capital.

This university, at a short distance from town, rises in majesty above the noble expanse of the clear and deep Lough Corib—a lake which, rising from the depths of its own great basin, sends torrents of the coolest, purest water through the town by a short and comparatively narrow passage; its ever-swelling rapids offering to industry a power which as yet the lagging speculatist converts to little use—at least as compared with the application of such natural advantages in England.

Amongst the advantages (valuable more peculiarly to a sea-port town) may be classed the easy distance of the *world's great cattle fair*, Balinasloe. For a naval depôt these cannot be overrated. And lastly, it may not be out of place to mention the truly Christian and primitive institution, originated by the Very Rev. Dr. Smythe, a Roman Catholic clergyman, at Eskar. That great philanthropic school was founded by the persevering energy, complete devotion, and unreserving liberality of the gentleman named, and perhaps hitherto unknown beyond the limits of the district. A large tract of several hundreds of acres was purchased by him, houses were built thereon, adapted to the cultivation of the soil, considerable numbers of the peasantry were induced to become domesticated, and there to learn the more advanced arts of agriculture. In the course of years, as the returns increased, the benign founder extended his cares to instruction in trades—those of shoemakers, tailors, smiths, carpenters, and even domestic servants, were taught, within the precincts of those hallowed enclosures, such habitudes as fitted them for that more humble calling; and yet this truly pious *chartreuse* was never made exclusive, nor subsidiary to the views of priestly nor of *episcopal partizanship*—a rare virtue in the Island of Saints!

From this foundation accomplished tradesmen, finished artizans, respectable mechanics, and honest servants, have emigrated to America, and settled there—some three score every year. And these have in gratitude returned to the worthy principal moneys—not for himself; no, they knew too well his aim and intention, but to extend the benefits of the system, to call their kindred to join themselves in America, and to do unto others as they had been done by. Such institutions tell that religious prejudices are on the wane.

The other great sea-port, Cork, requires and deserves a separate notice. Its great importance as a naval station, its commercial and territorial wealth, and its scenic beauty, were entitled to the first place. Returned peace may give a better occasion for the appreciation of its value in the last instance. The genius of this country is tending every day to commerce; modern Irishmen are not, as they were thirty years back, light, mercurial, *insouciants;* no, they have interchanged those manners, and left them with the Londoners. The negotiators, and toilers, and plodders, and speculators, *in matters of fact throughout the world*, are now Hibernians! they are no longer as

QUONDAM.

REVOLUTIONARY ARCHITECTURAL PRINCIPLES.*

WE have glanced at certain views of the nature, the moralities, and the economics—we are now to look a moment at an exhibition of what I may call the polity—of architecture; an exhibition no less portentous, whether as to what is simply architectural, or as to what is directly involved and distinctly implied, in reference to other things.

Mr. Ruskin appears, indeed, to regard the whole subject of architectural ornament, and of architecture itself, in a social as well as an artistic light. Thus he does not scruple to tell us that—

"Much of the delight with which we look on the fretted front of Rouen Cathedral, is the simple perception of time employed, and labour expended in its production."—*Mod. Painters*, part i. sec. i. chap. iii.

a statement which I, for one, can only receive as subversive of all that constitutes architecture a fine art, making, indeed, we might say, all art, by unavoidable implication, no longer the expression of our feelings, and a schooling and perfecting of our faculties, but a tasteless, mindless, vulgar evidence of the mere existence of those faculties. No wonder we find it further written, that—

"Power in labour is never wasted."—*Ibid.*

We might take this startling aphorism as one of the practical results of the artistic polity we are to look into; but let us proceed with all due method: we are told that—

"The systems of architectural ornament may be divided into three:—1. Servile ornament, in which the execution or power of the inferior workmen is entirely subjected to the intellect of the higher. 2. Constitutional ornament, in which the executive inferior power is, to a certain point, emancipated and independent, having a will of its own, yet confessing the inferiority, and rendering obedience to higher power; and 3. Revolutionary ornament, in which no executive inferiority is admitted at all."—*Stones of Venice*, vol. ii. chap. vi.

The two first systems are thus nationally apportioned:

"The Greek gave the lower workman no subject he could not perfectly execute. The Assyrian and Egyptian gave him subjects which he could only execute imperfectly, but fixed a legal standard for his imperfection . . . . *The workman was, in both systems, a slave.* . . . . But, in the Mediæval, or especially Christian, system of ornament, this slavery is done away with altogether."—*Ibid.*

The reason is no less remarkable than the fact,—

"Christianity having recognised, in small things as well as great, *the individual value of every soul.* But it not only recognises the value, it confesses the imperfection in only bestowing dignity upon the acknowledgment of unworthiness. . . . . And it is, perhaps, *the principal admirableness of the Gothic schools of architecture*, that they receive the results of the labours of inferior minds; and, out of fragments full of imperfection, and betraying that imperfection in every touch, indulgently raise up a stately and unaccusable whole."—*Ibid.*

We have long cherished the maxim that the "*summa ars*" was the "*celare artem*,"—the bathing performance and performer in the light of the subject. Every one knows Shakspeare's advice to the players (including the special order for the Clowns "to speak no more than was given them"): it is the glory of Shakspeare himself that he never lets you think about Shakspeare; and it is the infirmity of Byron that he almost never lets you cease to think about Byron. *Tempora mutantur:* we have been told that the special function of "imagination proper" is the simultaneous perception of mutual imperfections ("Modern Painters," part iii. sec. ii. chap. iii.): we now learn that the "principal admirableness" of the Gothic architecture consists — not in beauty, solemnity, impressiveness, the power of embodying hallowed feeling, and inspiring it,—but in giving the inferior workman the right of compelling you to think of him,—the right of scribbling his inferiority on gorgeous palace and solemn temple,—of converting cathedral fronts into a sort of monument to the perpetual memory,—shall we say, with his ingenious advocate,—of his "humility," and "the pride of an effective satire?"—or, of his self-sufficiency, rudeness, irreverence, and love of low buffoonery?

If our sense of degradation could be aggravated, it would be by the recollection of what we have been told by the same authority, that architecture is essentially the art of "associative sculpture;" and that "I do with a building as I do with a man, watch the eye and the lip: when they are bright and eloquent, the form of the body is of little consequence."—*Edin. Lect.* p. 120.

But let us hear something more of the principle. As they say in Italy, "*Si non e vero, e ben trovato.*"

"The finer the nature, the more flaws it will show through the clearness of it; and it is a law of this universe that the best things shall be seldomest seen in their best form.....Therefore, while we are to desire perfection and strive for it, we are not to set the meaner thing in its narrow accomplishment above the nobler thing in its mighty progress—not to prefer smooth minuteness above shattered majesty."—*Stones of Venice, ibid.*

What is this but revolutionizing the "*ne sutor ultra crepidam?*" But there is something further:—

"Above all, *in our dealings with the souls* of other men, we are to take care how we check, by severe requirement, or narrow caution..... ... In the make and nature of every man, however rude or simple, there are some powers for better things..... But they cannot be strengthened, unless we are content to take them in their weakness."—*Ibid.*

Is it not clear that we have mistaken the character and functions, as well as "principal admirableness" of Gothic architecture? I will not say we have gone the length of Robert Hall as to "soberizing the Bacchanalian," nor that we are now to go the reverse length of bacchanalianizing the Minster; yet is the actual contrast scarce less marvellous. We have looked hitherto on our cathedrals as sublime expressions of religious feeling: they are really and truly a sort of gymnasium, where Masters John and Thomas wrote down and stereotyped their "shattered majesty!" There they are—all noble alike, if you but read them rightly. In the light of Pre-Raffaellitism the true sermon in stones is "chipstone." And what a conclusion!—

"Out of all his dulness, all his incapacity, shame upon shame, failure upon failure, pause upon pause, but *out comes the whole majesty of him also* [no longer shattered], and we know the height of it only when we see the clouds settling upon him. And whether the clouds be bright or dark, *there will be transfiguration* behind them and within them."—*Ibid.*

Who can wonder, now, at the sacramental nature of trefoil and parsley? Who can dare to slight—who can do other than profoundly reverence the very infancy of such a manhood? and who can complain if, whilst other children leave their copy-books behind when they emerge from school, these masonic royalties hang up theirs for the wonderment of succeeding ages? Strange or not, there they are, and you are commanded to look on them:—

"Go forth again to gaze upon the old cathedral front, where you have smiled so often [not, of course, as the preparation for religious worship], at the fantastic ignorance of the old sculptors: examine once more those ugly goblins, and formless monsters, and stone statues anatomiless and rigid; *but do not mock at them, for they are signs of the life and liberty of every workman who struck the stone.*"—*Ibid.*

Such then is the artistic result of the gymnasium, or "transfiguration" process. We have all read of "the right divine of kings to govern wrong:" here is the correlative right of roughness, dulness, and stupidity, to disfigure cathedral fronts,—the *ultimate ratio*, in fact, of shattered majesty,—"ugly goblins, and formless monsters, and stone statues, anatomiless and rigid."

We may not swell these columns with self-evident deductions: yet it is impossible to withhold a further word as to the social part of the subject.

In all Greek, Assyrian, Egyptian, and Renaissance work, the inferior workman was, it seems, "a slave." Not to lose ourselves in expressions that precisely measure the slavery—"a thousand times more bitter and more degrading than of scourged African or Helot Greek,"—"prisons of the body,"—"graves of the soul," and so on; let us attempt to fathom the principle or proximate cause of a state so dire and shameful. It is, in truth, in a simple compass:—

"Square stones" (Edin. Lect. p. 76), "accurate mouldings" (Stones of Venice, chap. before quoted), and the reproduction of the same ornament, in violation of the great social law, that "*as men do not commonly think the same thought twice, you are not to require of them that they shall do the same thing twice.*"—*Edin. Lect.* p. 132.

These are serious words, very seriously uttered, and demanding, if only in courtesy, to

* Concluded. See pp. 161, 171, 203, and 227, *ante*.

be as seriously received and dealt with. No less certain is it that they cannot be taken in a restricted sense. Sound or unsound, they involve broad principles, and may not be made plea or basis for class legislation of any kind. If square stones are graves to masons, so must square walls be to bricklayers, and square boards to carpenters. If to require the inferior workman to do the same thing twice, is the bitter bondage, you are bound to carry out the practical inference. The inferior mason belongs to the common lump of humanity, and can plead no speciality, whether of mind, body, or estate. Carry out the great principle: write your Magna Charta in becoming language,—no two columns alike, no two capitals, no two hats, no two shoes, no two shirts, no two stockings, no two buttons, no two button-holes. Don't say stockings and shoes must match; that touches at best but a single pair. But all distinctions are beside the mark: enough *it is doing the same thing twice;* and that is bondage, incarceration,—intellectual, moral, and social death.

And what a prospect in the emancipation! If "there would be a resurrection" of masons, "as of renewed souls" (Edin. Lect. p. 77), so, of course, of shoe-makers, stocking-weavers, hat-makers, tailors, carpenters, bricklayers, plasterers, painters, brick-makers, pin-makers, stay-makers, cotton-spinners—where shall we stop? Why, you have but to establish the law, and you will have a general resurrection.

I will not attempt the whole chapter of consequences. We may certainly see much we are not quite prepared for when all these renewed souls go to work—each after "the will of his own"—on our houses, our furniture, our personal gear, and all the necessary machinery of our daily and hourly life. Some of us may be destined to a perpetual apprenticeship to the putting on and off of our own apparel. As regards art, the result requires no prophecy. If there be one fact in universal experience, it is that inferior minds are content with inferior things, and inferior workmen with inferior work. It is easy to talk of transfigurations: I affirm that the very conditions of the hypothesis are opposed, I had almost said, to improvement. *The standard of a majority* will be ever *a standard of mediocrity.* If the majority make the law, they will make it, not only after the notions, but in the interests of the majority: the sense of beauty, the spirit of excellence, will be poor correctives. These are, no doubt, natural instincts, but, save in natures specially gifted, very subordinate ones. Let power and inferiority go together, and the natural progress will assuredly not be upwards. Not only will ordinary faculties, common-place objects, and vulgar taste fix "the legal standard of imperfection," but self-sufficiency, shallow pride, ignoble selfishness, demand that every path shall be easy to all alike.

Your columns are no place for politics: let me only say that every virtue has its besetting vice, as every material substance has its attendant shadow. The shadow of liberty is just that notion of "equality" which so many will yet persist in mistaking for it. Into these things I must not enter. One thing is matter of consciousness: the special dread and hatred with which many of us regard sweeping radical principles in political and social life, is no simple jealousy of commonized power, but of commonized principles, standards, and functions,—the dread and abhorrence of a tyrannical average—a dead level of senses, perceptions, sensibilities, notions of fair and noble, of good and evil, that would infallibly dwarf down or ostracize all that, by surpassing excellence, rebuked itself—the thousand and one translations, in fact, of "*this fellow came to sojourn, and must be a judge.*"

I speak, of course, but of general tendencies: nor have I the remotest sympathy with the monopolizing, exclusive spirit that shapes its liking by the mere avoidance of what is common. We all profess and desire excellence for its own sake, and a steady, constant, pervasive advancement towards it. Were it not a direct denial of the very nature of things to assert that such advancement can be looked for from the conditions I have been intimating? that all which depends on finer perceptions, loftier feelings, profounder thoughts, a more generous, self-exhausting enthusiasm, will be originated and sustained by that, whose instinctive gravitation is towards equality? To hear some talk, one might suppose that good sense meant common sense, and that the word "vulgar," was but a term got up for factitious purposes at Almack's.

But we are not yet at the terminus of Pre-Raffaellitism. The great principle of "the division of labour" is, it seems, to be abjured; and an age, boasting of progress, to retrace its steps and return to barbarism. We have, in fact, given a wrong name to the principle.

> "It is not, truly speaking, the labour that is divided, but the men; so that all the little piece of intelligence left a man is not enough to make a pin or a nail, but exhausts itself in making the point of a pin, or the head of a nail."—*Stones of Venice*, same chap.

I will not stop to argue the case. That pin-making, whether in whole or part, should absorb a man's "soul," or what might practically come to the same thing, his time and thoughts, were indeed a murderous tyranny I would join any honest effort in putting down: but that the man's soul would be regenerated by making the whole pin instead of the point of it, and making it, not according to a fixed pattern, but after a will of his own, involves a chapter of metaphysics I want credulity, or faith, to open. We are not even yet, however, at the goal.

> "It would be well if all of us were good handicraftsmen in some kind . . . and yet more, *in each several profession, no master should be too proud to do the hardest work.* The painter should grind his own colours; the architect work in his mason's yard with his own men; the master manufacturer be himself a more skilful operative than any man in his mills; and the distinction between one man and another be only in experience and skill" (a hard-won distinction for the master), "and the authority and wealth which *these* must naturally and justly obtain."—*Stones of Venice*, same chap.

I think I am not overstating matters when I say that we are now beyond constitutional ornament. This broad principle, so honestly stated, comes from a special reprint of the special chapter, for the special benefit of those specially interested. Of course, the reformer has recked already "his own rede;" of course he helps to print as well as write—takes his post now and then at "the hardest part"—now and then, perhaps, with a certain black letter functionary not to be "named to ears polite"—perhaps allows the said functionary reciprocal employment, at least, in correcting the press: why not writing here and there, like mediæval masons, his grotesque and "effective satire?"

I will play no longer with a very serious subject. I have elsewhere written myself "a leveller to the backbone;" whether what we are here looking on is "*levelling upwards,*" I leave my readers to determine.

Let us love the "inferior workman," never forgetting for a single moment he is, for time and eternity, *our flesh and blood.* Let us care for him, watch kindly and scrupulously over his proper interests and lawful rights; but let us not think of doing all this *by becoming inferior workmen ourselves.* Let us cherish his nobler nature, and find channels for its development; but not by turning nails and pins into heroics, much less heroics into pots and pans; above all, let us recognise his essential membership in the social body, and give him, in all due and fitting ways the hand of brotherhood,—but let us solemnly pause ere, by abjuring necessary distinctions, or aggravating them by unseemly language, we sow seeds of discord, plant "roots of bitterness," and make the very amputation we deprecate, by suggesting the complaint an apostle adduced as an absurdity that precluded argument, "*Because I am not the eye or head, therefore I am not of the body.*"

Let these things be weighed and pondered,—not in the scales of party or personal controversy, but of serious, earnest, candid, enlarged, and enlightened thought. They involve, very plainly, the vital interests of art and architecture. *Can it be a moment assumed that they involve no more?* Is the great principle of divided labour and subordinated functions to be repealed *in extenso?* Are all distinctions of head, hand, and foot to be pronounced an out, rage? thought, invention, manual dexterity, and muscular strength to do, turn and turn about, each after its own liking, the same duty? Are law, language, and national polity to emulate the "fantastic ignorance of the old sculptors,"—not "silencing the peasant because he cannot speak good grammar" (*ibid.*)—"ugly goblins and formless monsters" had in reverence as "signs of life"—and "savageness" be an elemental quality in a Christian commonwealth, as it is alleged to be in "Christian Architecture"? Or is architecture to be a solecism?—an unresolvable discord?—a safety-valve for abstract rights and impossible theories?

But why is art to be made the scape-goat? *With what face* can we assert abstract principles in the case of art, while we lack the manliness to carry them out in other things? *With what prospect?* Do you expect the inferior workman to know no distinction beyond his own sense of it within the workshop, and to be the slave—the worse than Helot—the moment he steps out into social life? These are questions that will have an answer. LENY.

THE ROYAL LITERARY FUND SOCIETY.

THE anniversary dinner of this admirable society took place on the 7th inst. at the Freemasons' Tavern, Great Queen-street, H.R.H. the Duke of Cambridge presiding, and passed off with great spirit and success. The chairman, the American Minister (Mr. Dallas), the Belgian Minister, Mr. Robert Bell, the Bishop of Oxford, and others, spoke excellently well. Subscriptions were announced to the amount of 1,350*l.* During the past year grants have been made to the amount of 1,665*l.* a larger sum than the society had ever before dispensed in one year. Great credit is due to Mr. Blewitt, the secretary, for his untiring exertions in behalf of the fund.

CASTLE CAREY MARKET-HOUSE.

CASTLE CAREY, a small, pleasantly situated, and clean-looking town in Somersetshire, has lately been embellished by the works of two London architects.

The church has been almost entirely rebuilt by Mr. Ferrey, with a new tower and spire of remarkable elegance; and a new Market-house, to which the accompanying engraving refers, the work of Mr. Penrose, was opened on the 2nd of October last.

It is conveniently placed in the middle of the town, and occupies the site of an old Market-house of which almost all vestiges had perished. The shape of the ground is irregular and uneven, and the ground rises rapidly from the south to the north. The main building fronts the south: it is 64 feet in length and 24 feet in breadth (external dimensions). The height to the ridge of the roof is about 45 feet. The lower story is open and used for a corn-market, and on certain days for a cheese-market: it is well lighted, by windows towards the north, and an open arcade on the other sides.

Behind the main building, but forming one front with its western extremity, is a wing, seen in the engraving, running northwards up the hill: this, as well as the main building, has three stories. The lower is a market for poultry, vegetables, &c.; and the upper stories form reading-rooms and a dwelling for the porter. Over the corn-market, and behind the pointed arches which relieve the flat arches of the arcade from the weight of the superstructure, is a mezzanine story used for a granary and cheese store.

As the street at the back is considerably higher than the ground in front, a slightly inclined platform is formed against the east wall of the wing and over the open court, enabling carts to unload at once on to the level of the granary.

The upper story of the main building is an assembly-room, 51 feet by 20 feet 8 inches; having a small gallery for an orchestra at the western end. It is lighted at the east end by an oriel window. The roof is open to the ridge. The tiebeam is somewhat raised above the plate, and rests on curved struts springing from stone corbels. A convenient staircase, at the north-western corner of the main building, forms the communication between the different

CASTLE CARY MARKET-HOUSE, SOMERSETSHIRE.—Mr. Penrose, Architect.

stories and rooms, both of the main building and of the wing. A small court of a somewhat triangular shape occupies the remainder of the space. In this, butchers' stalls are placed, under a covered gallery along the curved wall which forms its northern boundary.

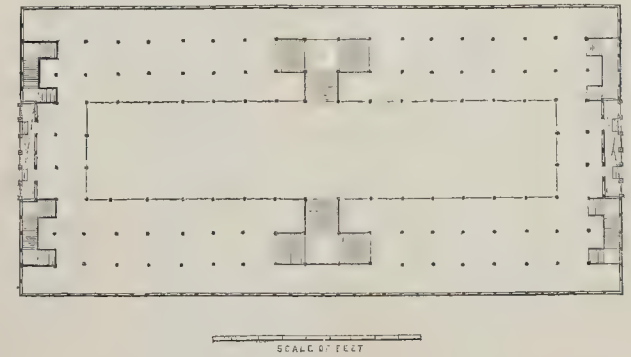
The Market-house is for the most part built of the ochreous coloured sandy limestone of the neighbourhood; and the pillars and other dressings are of freestone from Doulting, a stone much resembling Bath, but rather coarser, harder, and more durable. The roof is covered with Delabole slate. The builder was Mr. M. Davis, of Langport, who was also employed upon the church.

The entire cost of the building, including the market fittings, &c. was about 2,300*l.*

THE NEW MUSEUM BUILDING ON THE KENSINGTON GORE ESTATE.

In accordance with our promise we now give a plan and sections of this new building; and in justification of our strictures, and to the delight, doubtless, of the eye of taste in many a reader of our pages, we add a view of one of the sides of this melancholy construction, which is now a little further advanced towards the assumption of its complete form, and looks even worse than we anticipated. We had inadvertently stated that the shell was filled in with boarding; but we did our simile of the boiler some injustice in saying so, for it is filled in externally with corrugated iron, and is therefore all the more like a threefold monster boiler. The cost of the article, with the fittings, is estimated at 15,000*l.* a sum which might surely have been increased by a small per centage extra for the sake of appearance. The only imaginable excuse for its ugliness is the allegation that the structure is to be merely a temporary one; but this is scarcely consistent with the declaration of the Board of Trade report to the Treasury, that "it will at all times and for a lengthened period prove of much service." The report in question is the last in an appendix to the third report of the Exhibition Commissioners of 1851, which report, comprising 273 pages, and containing plans of the Gore estate, and of the new museum, has been printed for Her Majesty's Stationery Office.

According to the specification given in the appendix to this report, the building will cover an area of 3,700 square yards, exclusive of the galleries, which give an additional space equal to 2,700 yards, making an entire space for exhibition of 6,400 yards, or 1½ acre. The walls of the building are composed of cast-iron uprights or standards, placed 7 feet apart, and tottled to a foundation frame of timber. The spaces between the columns are to be filled up with corrugated sheets, and the interior of the walls lined with boarding, tongued and grooved.



The building is being covered by three segmental roofs, each 42 feet span, supported on the outside walls, and on two intermediate rows of columns. The trusses are of malleable iron, 7 feet asunder, and covered with corrugated sheets. A skylight, 12 feet wide, and raised 18 inches from the surface, run along the entire ridge of each roof, the sides being fitted with moveable wrought-iron louvres.

Galleries 42 feet wide run down each side of the building, and fill up the whole space beneath two of the roofs. They are connected at the ends by cross galleries 21 feet wide. And these galleries are carried by a system of longitudinal and cross girders—the longitudinal girders being placed 14 feet apart, and at an equal distance from the outside walls, and supported by columns placed 14 feet asunder. The cross girders spring from each of the standards of the outside walls, the principal ones resting on the interior columns, and the intermediate ones being tottled to the longitudinal girders. Joists are fixed between the cross girders, and the flooring spiked to them. The galleries are fenced by a light trussed railing, and lighted by the sky-lights in roof.

DECISIONS UNDER METROPOLITAN BUILDING ACT.

ORNAMENTAL REPAIRS NOT EXEMPT.

At Marlborough-street Police-office, on the 3rd inst. Mr. Bingham gave a decision in the case of an information laid by the district-surveyor of St. George, Hanover-square, Mr. Foxhall, against Mr. Longmire, of New Bond-street. The magistrate's statement will explain the case. Mr. Bingham said,—The defendant commenced work on his house in Bond-street after January, 1856. He removed a shop window and the cornice over it, took away a wooden brestsummer above the window, placed an iron one in its stead, and then fixed a cornice over the window exceeding in width the 18 inches prescribed by the statute. It cannot be contested that this is work commenced on the old building after the 1st of January, 1856. But it is contended that, under the 9th section of the Act, "necessary repairs" are excepted from its operation. It seems to me, however, that the cornice-work done by the defendant, if repair at all, as distinguished from alteration, is, at all events, ornamental repair, and not necessary repair. The work, therefore, must be altered to a conformity with the regulations of the Act.

BUILDINGS COMMENCED BEFORE JANUARY, 1856.

At the same court, on the same day, judgment was given in the case of Mr. Foxhall, district-surveyor, *v.* Mr. Clark, builder to Messrs. Laurie and Marner, of Oxford-street. The question was, whether Messrs. Laurie and Co. were justified in roofing in an area 40 feet by 47 feet, existing in 1855, by putting an iron and glass roof in 1856 on the then existing old walls, by which roofing they joined their large coach factory in Oxford-street to the premises in Tenterden-street, making the workshops of greater cubical contents than either the present or the late Act allowed. The information was laid under the present Building Act.

Mr. Bingham said,—In this case the "enclosing walls" of the defendants' building were commenced and carried 13 feet higher than the footings, and were surmounted by a plate for the reception of a roof, in November, 1855. The roof itself was not placed on these walls till March, 1856. It is clear that on the 1st of January, 1856, these "enclosing walls" were an "old building," exempt from the operation of the statute within the definition of sec. 8, 18th and 19th Vict. c. 122, which enacts that "a building shall be deemed new whenever the enclosing walls thereof have not been carried higher than the footings, previously to the 1st of January, 1856: any other building shall be deemed to be an old building." But it is contended, on the part of the surveyor, that the roof fitted on in March, although projected by the builder in the previous November, as must be inferred from his then surmounting the walls with a plate, is an alteration, addition, or other work made or done to, or upon, the old building; and if so, according to section 9, is subject to the regulations of the new statute. It is difficult, however, to understand why walls "higher than the footings" previously to January, 1856, should be designated by the Legislature as an "old building," unless the expression, "higher than the footings," was intended to comprehend the entire superstructure, which such walls were, at the time of their erection, intended and adapted to support. That superstructure, if carried out in conformity with the original plan, is part and parcel of what the statute calls the old building, as much as if it had been completed in November, and if so, must be subject to the same law as the old building. If the enclosing walls themselves had been altered or extended after December, or there had been evidence that the plan of November had been departed from, and that the roof in question was the result of a new plan substituted after December, that would have been an alteration of, addition to, or some work in the nature of alteration or addition done on, the old building. But the whole of the present structure seems to me, in the sense of the Act of Parliament, the old building of November. I think, therefore, the magistrate cannot make any order on the defendants.

EAVES TO OVERHANGING ROOFS.

Mr. Pound, building some semi-detached houses in Greenwich, was required by the district-surveyor (Mr. Browne), under section 26, paragraph 1, to construct the projecting portion of the roof of one house, within the prescribed distance of 15 feet from another building, of wholly incombustible materials. Ultimately the case went before the magistrate.

The section says:—

"Every coping, cornice, facia, window dressing, portico, balcony, verandah, balustrade, and architectural projection or decoration whatsoever, and also the eaves or cornices to any overhanging roof, except the cornices and dressings to the window fronts of shops, and except the eaves and cornices to detached and semi-detached dwelling-houses distant at least 15 feet from any other building, and from the ground of any adjoining owner, shall, unless the Metropolitan Board otherwise permit, be of brick, tile, stone, artificial stone, slate, cement, or other fireproof material."

Mr. Pound contended that the Act of Parliament only required the eaves, or cornices, to be of fire-proof materials *to* the overhanging roof, but that the materials constituting the "overhanging roof" itself, were not defined. The district surveyor said, that the general reading of this section was, that the projecting portions of roofs, coming within the prescribed distance of 15 feet, must be of wholly incombustible materials, and such was the superintending architect's opinion. Mr. Trail, the sitting magistrate, said section 19 required roofs to be externally covered with slates, tiles, or metal. Section 26 only spoke of eaves and cornices *to* any overhanging roof. That "eaves" meant the extreme finish of the roof itself, the last course of slates or tiles, and that therefore the complaint must be dismissed.

It is proper to mention that the district surveyor was of the same opinion as the magistrate, and had proceeded with the case only in deference to the general opinion, and for his own protection. The supposed requirement in the Act was opposed by the district surveyors before the Parliamentary Committee, but ineffectually, builders oddly enough urging its importance. The question, which will probably require some further arguing, should at once be set at rest.

ROYAL INSTITUTE OF BRITISH ARCHITECTS.

ANNUAL GENERAL MEETING.

The annual general meeting of the members of the Institute was held on Monday evening last, Mr. Tite, M.P. vice-president, in the chair. The report of the council showed that during the past year ten gentlemen have been elected fellows, six of whom were previously associates, and that fourteen have been elected associates. There are now 135 fellows and 136 associates. Mention was made that,—

"The council having ventured to suggest to the Directors of the East-India Company the advantage to be derived from allowing the interesting set of drawings, representing the public buildings at Beejépore, to be copied for distribution, they have much pleasure in learning from Mr. Fergusson, through whose intervention the drawings were made, that photographs are now being produced from them under his direction—an instance of attention to the interests of art on the part of the Hon. Company well worthy of imitation by other public bodies."

The addition of 200*l.* stock to the funded property, and a good balance in hand, showed a satisfactory state of affairs financially.

The report having been received and adopted, thanks were voted to the president, Earl de Grey, with expressions of condolence for a recent bereavement; to Mr. Scoles, specially, on his retirement from the office of honorary secretary; to Mr. C. C. Nelson; the council, and other officers of the Institute.

The ballot was taken for the election of office bearers for the ensuing year:—

The following were elected: President—Earl de Grey. Vice-presidents—Messrs. W. Tite, J. B. Bunning, and G. G. Scott. Honorary Secretaries—Messrs. C. C. Nelson and M. D. Wyatt. Mr. T. L. Donaldson, for foreign correspondence. Ordinary Members of Council—Messrs. A. Ashpitel, H. Baker, C. Barry, jun. H. Clutton, St. James's, J. J. Cole, J. Gibson, George Godwin, Owen Jones, T. H. Lewis, and J. Whichcord. Treasurer—Sir W. R. Farquhar, bart. Honorary Solicitor—Mr. W. L. Donaldson. Auditors—Fellow, Mr. F. W. Porter; and Associate, Mr. C. B. Thurston.

IRON AND GLASS IN BUILDING CONSTRUCTION.

There has probably never been a time in the world's history when men did not wish to be told of some new thing. At present there is a shaking amongst the dry bones of architecture; and we have preachings, denouncings, and prophesyings, revivals and new creations,—one of the newest being *pseudo* Crystal Palaces. Iron and glass are to supersede all other kinds of material; and not only are exhibitions and museums to be constructed of these materials, but even whole town communities are to be roofed beneath glass; and the Sydenham Exhibition construction is to be repeated, or duplicated, at every large town in the empire. Men are seldom long without a mania, and we bid fair to have an iron and glass constructing mania,—which, like most other manias, will end in disappointment, ruin, and disgust. Even the good will be confounded with the evil, and, for a time, will be swamped with it. People should wait to have some experience, or should at least ask for a faithful report as to existing experience of the use of iron and glass;—firstly, in the Exhibition at Hyde-park; and, secondly, in the structure at Sydenham. On the last day of the Hyde-park Exhibition rain came through the roof like water through a cullender, and we know that there are hundreds of leaks in the roofs every wet day at Sydenham. This liability to leakage during rain must ever be a serious drawback, and we should ascertain the cost of repairs and maintenance before multiplying such structures. But there are defects (for building purposes) inherent in the materials; and these defective qualities no art can overcome nor remove: we mean the vitreous character of iron and glass. In this variable and moist climate of England, there are many days when condensation takes place on all substances a few degrees lower in temperature than the surrounding atmosphere. Invisible vapour becomes visible and palpable wet, running down or dropping from all substances which condense and do not absorb. The praises of "marble halls," have been sung in romance and in poetry; but marble halls are anything but comfortable halls, simply because of the coldness of the substance, and the non-absorbing character of the surface. In these qualities marble resembles iron and glass.

There is one department at the Sydenham Palace where the glass is a positive injury. This is in the roof over the pumping engines: condensation takes place on the glass to such an extent as seriously to injure the ironwork of the engines beneath. Condensation must take place over the whole area exposed.

There is another defect in such structures, namely, open joints where the materials come together. It is practically impossible to make a permanent water-tight joint betwixt iron and glass: the materials do not expand and contract equally. There is vibration, and betwixt glass and glass there is no attempt at forming a joint other than "but" or "lap," through which rain is blown and snow is drifted. Again, iron will rust and glass will fracture, so that painting and repairing must go on in one perpetual round. These items, *painting* and *glazing*, will not be small for the Sydenham structure, and we say again, the cost should be ascertained before any large outlay is incurred in other places.

The parent type of the *Crystal Palace* is acknowledgedly a conservatory. For the purposes of a conservatory, iron and glass are the most fit material. The framework must be slender, and should be elegant. Plants require light, vapour, and heat: a few leaks more or less are of little consequence, because water must be used liberally over the soil and over the leaves of tropical and other hothouse plants. That which is an advantage in a conservatory, is a cause of ruin in an exhibition: silks, jewellery, pictures, statuary, furniture, musical instruments, and the thousand and one things collected in a large exhibi-

tion or bazaar require perfect shelter from wet; and, if this is not secured by the main structure, a second roof must be provided within. The advocates for crystal palaces must not forget this. Iron and glass have their use. They enable the architect to second the desire for *show* in modern shop-fronts. Floors, roofs, and galleries may have wider spans and bolder projections. Pillars, beams, and girders may have lightness and strength not to be obtained by timber, stone, or brick: for such purposes cast and wrought iron are peculiarly fitted, the one to bear crushing pressure, the other to resist tensile force; but the one must not be put to serve for the other; the cast iron for the wrought, admitting that, for many modern requirements, the architect may use iron as indicated. This fact must not be lost sight of: oxidation will take place, leading to premature decay. Public buildings require stone and bricks. These are the true materials for the architect to use. Iron and glass must be secondary and subservient. To use them as at Sydenham will only lead to extravagant cost and ultimate disappointment.

ENGINEER.

PROVINCIAL NEWS.

Lincoln.—A new building for offices to the Midland Counties Fire Insurance Company, is now about to be erected on the site of the old Parsonage in Silver-street, according to the *Lincolnshire Chronicle*. Tenders for the new building were decided upon on Wednesday before last. The tenders were as follow: — C. Ward, Lincoln, 2,780*l.*; Cave, Gainsborough, 2,749*l.*; W. Huddleston, Lincoln, 2,748*l.*; Sharman, Spalding, 2,663*l.* 10s.; Biatt and Binns, Nettleham and Lincoln, 2,618*l.*; Barnes and Birch, Lincoln, 2,567*l.* The lowest tender was accepted. In this case there was thus only a difference between the highest and lowest tenders of 213*l.* The architects' estimate was 2,725*l.* The architects are Messrs. Bellamy and Hardy, of Lincoln.

Horncastle.—The newly-erected Corn Exchange here was occupied by the public for the first time on Saturday before last. The interior has been ornamentally painted, under the direction and at the cost of the architects, Messrs. Maughan and Fowler, of Louth.

Netley.—The foundation-stone of the new Military Hospital, near Netley, was to have been laid by her Majesty, on the 12th instant, but the ceremony has been postponed on account of the ungenial change in the weather. The total extent of ground bought for the purposes of the hospitals, according to the *Hampshire Advertiser*, is 90 acres, and the building will cost from 150,000*l.* to 160,000*l.* It is calculated to hold, including the necessary staff, 3,000 persons. 150 men are already engaged in making new roads on the land, and erecting a jetty, &c. for the accommodation of the Queen. The pier or jetty will be run out about 150 yards from the shore. The site is about half a mile below Netley Abbey.

Gloucester.—The new market in Eastgate-street, of this city, was opened on Tuesday before last. The building stands upon the site of the old market, the present market being increased by the space occupied by the old corn market and sundry dilapidated tenements and stables facing Bell-lane. The total area is about 2,150 square yards. The building is divided into two compartments. The principal one, extending from Eastgate-street to Bell-lane, is 230 feet in length, 53 feet 6 inches in width, and 40 feet in height, to the ridge of the roof. The second one, connected therewith upon the west side by light iron columns, is 160 feet in length, 32 feet in width, and 32 feet in height to the ridge of the roof. The roof is composed of wrought iron arched principals, having a light appearance, the largest span being 53 feet 6 inches. A portion of it is glazed, the remainder boarded and slated. The market is fitted up with shops and stalls. A fountain, in the principal avenue, is surrounded by fish stalls, and separates the butchers' from those at the principal entrance. The fountain has been executed by Mr. Seeley, of London. All the latest improvements have been intended to be combined in the various arrangements. The market has been lighted with gas, by Messrs. Rogers and Gough, of this city. The principal façade in Eastgate-street is of Bath stone, and composed of four Corinthian columns and pilasters, supporting a pediment, crowned by a bell turret. Three arches between the columns give access to the market. Cast-iron gates, with scrolls bearing the City Arms, fill up the several archways. The carving has been executed by Mr. H. Frith, of this city. The façade in Bell-lane is constructed almost entirely of bricks. The mass of the work is of red brick; the quoins, cornices, arches, panels, and salient points being marked by white and blue bricks. A campanile divides the two compartments of the market. The works have been designed by Messrs. Medland and Maberly, of London, and carried out by Messrs. Jones and Son, of this city. The iron work for the roof, gates, and butchers' stalls, was executed by Messrs. Perry and Sons, of Bilston.

Liverpool.—The Liverpool Corporation have just completed some extensive alterations in connection with the docks; costing about 500,000*l.* New warehouses, and a dock and basin, seven acres in extent, have been made on the Wapping property; the warehouses, which are fire-proof, and fitted with hydraulic cranes, having cost 88,000*l.* The Queen's Dock has also been deepened five feet, so that it will now accommodate the largest ships of burden. At these docks ships can be unloaded with greater rapidity under cover, and their cargoes placed on railway trucks, and despatched immediately to any part of the kingdom.

Manchester.—The building erected in Quay-street, for the new St. Mary's Hospital, is expected to be opened in a few weeks. The builder is Mr. Robert Neill, Strangeways; and the architect, Mr. N. G. Pennington. The gas-fittings are being put up by Mr. William Wilson; and the plumbing work by Mr. Helsby. The lecture and operation rooms, which are fitted with rising circular seats, will be lighted at night by "sun-burners." The lecture-theatre will seat 200 persons. The other principal rooms are the Radford Museum and Library. All the large rooms are fitted with "lantern lights." There are between forty and fifty smaller rooms, and accommodation for about ninety beds for patients. The building forms nearly a square, having a frontage to Quay-street of 92 feet, and a depth of 90 feet 6 inches. The original estimate of the cost was 5,200*l.* but an addition made to the Atherton-street side of the building, and the gas-fittings, &c. will be extra. A lithographic view of the hospital has been executed by Messrs. Day and Sons, lithographers, London, and published by Messrs. Agnew, of Manchester. The building is in the Italian style of architecture.

Oldham.—The New Lyceum here is to be opened in the end of June. The building is of stone, in the Renaissance style, and will cost about 6,000*l.* a considerable portion of which has been subscribed. The lecture-room and music-hall will be decorated, and will have a semi-circular ceiling. It extends the whole length of the building, and has nine large windows on one side. The architect is Mr. N. G. Pennington, of Manchester.

Durham.—Mr. William Ground, of Petersborgh, civil engineer and surveyor, has been appointed Surveyor and Inspector of Nuisances for the borough of Durham, vacant on the resignation of Mr. Thomas Dickons, through ill-health.

Jarrow. — The contractors for the Jarrow Docks are busily employed with the embankments; and, in a week or two, nearly seventy acres of the slake will be enclosed. About 500 yards of the river wall is constructed. The mason-work of the six jetties leading to the dock are also progressing rapidly towards completion; and the lines of railway to them are about half finished: 100 men are also at work diverting the channel of the river Don.

Glasgow.—The Committee of the Loch Katrine Water Commissioners, at a late meeting, recommended the appointment of Mr. Mackain as resident engineer, on the same terms of remuneration which he held from the Glasgow Water Company, viz. 600*l.* per annum, and a free house at Dalmarnock. The committee reported that the offer of Messrs. Richard Thompson and Son, of Blackburn, for the construction of the Mugdock Reservoir and relative works, at the price of 40,158*l.* 15s. had been accepted. The offer of Mr. George Adamson, of Edinburgh, to construct the Mugdock tunnel and relative works was accepted. The minutes of the committee were approved of.——The extensive wholesale warehouse of Sir James Campbell and his copartners, in Ingram-street, appears to be now completed, and we take the following from a description given in a local paper. "Among the most recently-erected and most important 'commercial palaces' in this city is that of the Messrs. Campbell, in Ingram-street. The great extent of its walls, and the unusual style of its architecture, make it universally attractive. We need give no elaborate account of the various styles of architecture included in it, but it appears to us to be chaste and elegant, and well suited for the end which it is intended to serve. Opinions vary in regard to the projecting tower at the north-west corner, but, be that as it may, the long tiers of windows are well contrasted by the serrated or gabled upper termination of the walls, which sufficiently redeem it from the monotonous sameness of ordinary street architecture. The erection is of four stories, and, as each floor is the greater part of an acre, we have thus a surface of several acres available for business purposes. The whole interior of the establishment is open, that is, there is no partitioning of wood or stone into compartments, and no walling off by material that cannot be seen through. The various floors are supported by handsome iron pillars, a space being left in the middle of three upper floors immediately under a spacious glass roof, from which a flood of light is diffused throughout all the establishment. The framework of the lantern being of a light blue, with touches of yellow and crimson, the effect is extremely pleasant and lightsome. The ascent to the various floors is by a spacious stair at each end, both stairs throwing a branch to each side of the floor. The tower is a much more 'roomy' place than would be supposed from looking at it from the street. The floor of the tower is about 50 feet above the level of the street. The roof of the entire establishment is composed of six ridges, or rather six roofs, each having sloped ends and sides, and the north angles having lights in them."

CHURCH-BUILDING NEWS.

Martham, Great Yarmouth. — St. Mary's Church, Martham, Norfolk, consisting of chancel, nave, and aisles of five bays, groined south porch, with parvise, and western tower opening into nave, is now undergoing restoration. The arcades, with lofty clerestory, are being rebuilt. All the roofs will be executed in English oak, moulded, and covered with lead. That over the nave will be of hammer-beam construction, the curved ribs resting on angels holding scrolls and shields. Open seats of oak, with poppy-headed standards, will take the place of the pews, in conformity with original design. The chancel will be rebuilt next year. The works above mentioned are being executed at the sole cost of the widow of the late Rev. Jonathan Dawson. Messrs. Johnson, of Yarmouth, are the contractors for nave and aisles. The architect is Mr. Philip Boyce, of Cheltenham.

Colchester.—On Friday, in last week, the ceremony of consecrating the cemetery of eleven of the parishes of Colchester was performed by the Bishop of Rochester. The cemetery comprises eighteen acres, planted by Mr. B. R. Cant, nurseryman. The buildings are Episcopal and Nonconformist chapels, lodge, and receptacle-house for the dead. The chapels, in the Gothic and Decorated period, are of same size and design (save that the bell-turret in the Nonconformist chapel has open trellis-work in place of a bell). They are built on the cruciform plan, with open porch, tracery windows, stone crosses on the gables, and bell-cot. The material is Kentish rag, in random courses, with Bath stone dressings. The interior is plain, with roof supported by open stained wood-work. The Episcopal chapel has a carved wood reading-desk and chair in the chancel. The Episcopal chapel on the upper portion of the cemetery stands east and west, and the Nonconformist

chapel on the lower part of the ground looks north and south. The original designs were by Messrs. Edwards and Law, of London, architects, and afterwards carried out by Mr. Barnes, of Ipswich, architect. The contractors for carrying out the erection of the works were Messrs. Colls and Co. of London.

Northampton.—St. Peter's Church, which, for years, remained in a dilapidated and neglected state, has been thoroughly restored, according to the local *Herald*, and a school in St. Peter's parish, for the education of the children of the poor, is rapidly progressing towards completion. The latter was designed by Mr. E. F. Law, of Northampton, architect.

Harrow.—The school chapel at Harrow has been undergoing a process of almost entire transformation. A new aisle has been added to the original building from funds subscribed by the masters and the parents of the boys, and a chancel erected at a cost exceeding 2,500*l.* by the head master, Dr. Vaughan.

Romsey.—Mr. Lower, the architect appointed by the Local Burial Board, has submitted designs for chapels and a lodge at the intended cemetery; and although, says the *Hampshire Independent*, they were in a rather more elaborate style than severe economists might recommend, they were generally approved of by the Board, and will shortly be submitted to the vestry.

Birmingham.—A monumental brass, executed by Messrs. Hardman, of Birmingham, has just been laid down in St. Andrew's Church, Wells-street, in that town,—"In memoriam viri dilectissimi Vicesimi Knox." The figure is habited in a modern costume, over which robes are represented, the deceased having been a Bencher of the Inner Temple and Recorder of Saffron Walden.

Huyton (Liverpool).—The foundation-stone of an Independent church was laid at Huyton on Wednesday before last. The church will be about 70 feet by 40 feet, and is to be in the Gothic style, and of slate stone from Huyton quarry. The architect is Mr. T. R. Brown; the builder, Mr. Lyons, of Huyton; the joiner, Mr. Hughes, of Liverpool; and the plumber, Mr. Wainwright, also of Liverpool. The clerk of the works is Mr. J. H. S. Gibson.

Skipton.—The restoration of Skipton Church has been effected under the superintendence of Mr. J. A. Corry, of Durham. The east gallery has been removed, and the roof entirely restored, with the addition of carved brackets resting upon corbels, in accordance with the general architecture of the building. The square pews, which formerly filled the nave, of various heights and dimensions, have been taken away, and low oak seats, of uniform height, with carved ends, substituted. The chancel is a continuation of the nave without any visible division, except a slight difference in the masonry of the pillars and the clerestory windows. The carved screen which formerly marked the separation of nave and chancel has not been replaced. The want of stained glass in the east window leaves an impression of coldness and incompleteness, but it is believed the liberality of the parishioners will not leave this want long unsupplied. The formal re-opening took place on Wednesday in week before last.

Salford.—The sub-committee of the local burial board, in a report presented to the council by the committee, describe the contracts entered into for roads, boundary walls, &c. for the new cemetery, and the progress made by the several contractors. In concluding, the sub-committee state that "considerable delay has arisen in reference to the chapels, in consequence of the abandonment of the designs of Mr. Hill (originally selected), owing to the great difference between the stipulated sum and the amount of the tenders; but the committee are now advertising for tenders for the execution of the designs of Messrs. Pritchett and Sons." The report was adopted.

Buttermere.—The consecration of the new church at this isolated village took place on Monday before last, the Bishop of Salisbury officiating. The old parish fabric in the lapse of time had become decayed, and beyond repair. The new church is built on the old site. The designs were by Mr. R. J. Withers, of London, architect, who superintended the erection. The cost was 500*l.* The west window with a small portion of stained glass in the upper trefoil, the bowl of the font, and the bell are relics of the old fabric. The decorations of the interior, the pulpit, reading-desk, and stained glass windows are all donations.

Glasgow.—At a meeting of the City Incorporation of Wrights, held in the Trades' Hall, it has been resolved by a large majority that the sum of 50*l.* be voted as a contribution to assist the Trades' House in filling in one of the transept windows of the High Church with stained glass.——Mr. Rochead, the architect of a new Unitarian chapel here, has, according to the *Gateshead Observer*, designed an edifice for the Scottish Church, to be erected in the West-end-park, with a campanile upwards of 150 feet high, at the north-east corner, in which will be the main entrance.

FRENCH SCHOOL OF FINE ARTS.

Our brave allies do not shine quite so brilliantly in their exhibition of pictures, opened on Saturday, at 121, Pall-mall, as in former years: in fact, it is scarcely above mediocrity. There are some works, undoubtedly, of great merit, to which our strictures do not apply; but, on the whole, their presence does not compensate for the many unsatisfactory pictures by which they are surrounded. We must again object, too, to the manner in which the catalogue is arranged. Why should "140" be placed close to "35," and poor "36" be driven to the opposite side of the room? Unless, indeed, it be to convince grumbling Englishmen that "Routine" is not to be always despised.

We will follow the example of the catalogue, and pick out a few pictures, regardless of all order, beginning with "The Three Ages" (243), by C. L. Muller, very nicely conceived and equally well executed: of Mdlle. Rosa Bonheur's three small-sized pictures, the "Auvergne Peasant" (46), though only "a study," pleased us most: the head and hat are admirably touched.

Gudin has a wonderfully powerful sea piece (162), "Fishing-boat on the Dutch Coast;" and whoever shall be so lucky as we were, to see it with a bright sunbeam shining, as it were, right through the foremost waves, will feel as we did, that this is nature's truth, and that it is worth all the mannerism of any school or age.

Fichel has six of his pretty cabinet pictures, of which (145) "The Workman's Meal" is most to our liking; but he is eclipsed by Billotte, whose "Dairy Maid" (37), and "Breakfast" (35), are perfect gems. "Explaining a Dream" by Comte (98), is clever, especially in the texture of the dresses, velvet, &c. M. Paul Delaroche has discarded the romantic notion that the first Napoleon crossed the Alps on a prancing white charger (110). Eugene Flandrin, in his "View at Tripoli" (138), and "Mosques at Scutari" and "Stamboul" (139 and 140), is very successful; as are also "A Street in Constantinople," by Frere (156); and "Interior of St. Cecile," by Dauzats (105), in which the perspective is very effective. We would also notice (182) "The Boat Carpenter," Hoguet, and (195) Labouchère's "Erasmus." To Ary Scheffer's "Three Maries," displaying though it does, great thought and feeling, it must be objected that the drawing of the eyes and throats is very defective. Other artists have thought with him, that by making the throat large, strength and dignity are given to the figure; but we have here another instance of what is unfortunately but too general, namely, exaggerating a beauty until it becomes a deformity. It is a fine picture nevertheless.

TASTE IN GAS-FITTINGS.

Last week Mr. G. R. Burnell, C.E. read a paper at the Commercial School-rooms, St. Martin's-lane, before the Gas-fitters' Association, "On the Principles of Taste as applied to Ornamental Gas-fittings." The lecturer disclaimed any desire to lay down defined canons of taste, as applied to gas-fitting, since the judgment of the gas-fitter must, in a certain degree, be limited by the style of the building to which the fittings were to be applied, and to which their design should conform as much as possible, to avoid the appearance of anachronism, and also by the taste of those by whom he was employed. In all cases there were two essential points which should be borne in mind, the mode of distributing the light, and the quantity to be distributed. A dining-room, for instance, would require less light than a drawing-room, a lecture-room less than a theatre. He contended that it was in vain to expect any marked improvement until principles were more extensively applied, and in some measure thought the English gas-fitter might learn useful lessons in this respect from our neighbours, the French, illustrating his position by a drawing of a lamp, from the Place de la Concorde, Paris, which bore a remarkable contrast with the unsightly gas-lamps which disgrace the metropolis. The lamps at the Peel monument, in Cheapside, were given as recent instances, showing the room left for improvement; whilst the Philharmonic-hall, at Liverpool, was mentioned as one where the principle of light and distribution had been well applied. The want of taste displayed by London tradesmen was animadverted on, and the gas-fitter was forcibly impressed by the lecturer with the necessity which existed for cultivating taste, as an important adjunct in connection with his art.

OXFORD AND CAMBRIDGE ARCHITECTURAL SOCIETIES.

Oxford.—At the second meeting, on the 30th April, Mr. Parker, in continuation of his lectures "On Foreign Mediæval Architecture," read a paper "On the Architecture of France, South of the Loire." He reminded the members of the long continuance of Roman civilization in the south of France, and as a natural consequence the large number of buildings copied from Roman remains; also the early existence of a colony of Greeks who have left numerous churches of strictly Byzantine plan and construction; and a third class of churches which consists of a mixture of the two. This southern character extends as far north as the Loire, and the Cathedral of Angers is just of that character. In the same town is the Hospital of St. John, built by Henry II. which still is a public hospital. The hall of this hospital has all the lightness and elegance of a pure Gothic building, and it is believed to be the earliest building of that style in existence anywhere. He pointed out the beauty of the sculpture of the south even as early as the eleventh century, and that the art of sculpture travelled from the south northwards; but Gothic architecture, though it had attained to a certain point there, afterwards stood still, and was carried to much greater perfection in the north.

Cambridge.—At the second meeting of the society for the Easter Term, held on Friday, April 25th, the Rev. G. Williams, Vice-Provost of King's College, delivered a lecture "On some Controverted Points in the Topography of Jerusalem." Mr. Fergusson, in his "Essay on Jerusalem," had advanced a theory that the building called Es Sakharah, the Dome of the Rock, popularly known as the Mosque of Omar, is the identical church built by Constantine over the tomb of the Saviour. Mr. Williams contended at great length, with the help of diagrams, that Mr. Fergusson's views were wholly untenable.

PROPOSED GIGANTIC TUNNELS THROUGH THE ANDES, SOUTH AMERICA.

Among the various schemes which have been proposed for inter-oceanic communication between the Atlantic and Pacific, is one brought forward by Mr. Kelly, an enterprising gentleman of New York, who is at present in England, in order to lay the matter before the British Government. His scheme embraces the canalization of part of the grand river Atrato, and penetrating the Andes by two gigantic tunnels, which, if executed, would rival the Egyptian pyramids, and the celebrated wall of Babylon. The length of the twin-tunnels so proposed is 3¼ miles, the span or width 100 feet, and the extreme height 120 feet each respectively.

In order to form a proper notion of the magnitude of such tunnels, it is necessary to put down on paper the dimensions of one of the largest works of the kind which have been actually executed; such a work is the Box tunnel on the line of the Great Western Railway, which is 313,332 yards in length, 27 feet wide at springing of invert, 30 feet wide at springing of arch, and 25 feet high. The excavation, chiefly in freestone, amounted to 247,000 cubic yards. Now, taking the proposed Andes tunnels, at an average height of 100 feet, we have 57,200,000 cubic yards to be excavated, which, at 9s. a yard only, would amount to 25,740,000*l.* It is supposed that the stratification of the Andes at the part to be penetrated, is chiefly *greywacke*, or clay slate, such as is met with in certain districts of Westmoreland.

Another mode of illustrating the magnitude of the proposition, is to state, that one of the proposed tunnels would contain all the railway and canal tunnels in the United Kingdom.

COMPETITIONS.

Luton Sewage Plans.—The Luton Board of Health, after some discussion, have decided that of the six plans sent in for competition, and reported on by Mr. Dickens, the engineer of the General Board, and by the Tottenham committee of that Board, that marked "So oder so," be adjudged the premium of 30*l.* and that marked "Boar's Head," the second premium of 10*l.* On opening the sealed envelopes it was found that the successful competitor in both cases was Mr. T. L. Evans, of Luton, C.E.

Liverpool Museum, &c.—We understand that from 100 to 120 sketches have been sent in, and that the committee are proceeding to reject all that are evidently unfit. No person is to be allowed to see them, it is said, but the committee and their professional assistants, should such be employed.

Rotherham New Grammar School.—Ninety-nine designs have been submitted in competition, out of which the feoffees have selected that of Mr. Wm. Blackmoor, of Rotherham, for the first premium; and for the second that of Mr. Barry, of Liverpool.

PAYMENT FOR ASSISTING IN OBTAINING A GOVERNMENT CONTRACT.

ELLIS *v.* BENNETT AND ANOTHER.—WORK DONE IN PROCURING A GOVERNMENT CONTRACT.

THE plaintiff in this case (tried in the Common Pleas, May 2nd) is a surveyor at Northfleet; and the defendants are Government contractors, carrying on business in Pimlico. The action was brought to recover 100*l.* a sum agreed to be paid to the plaintiff for assisting the defendants in obtaining a Government contract.

The plaintiff's case was, that last summer he was engaged in some earthworks which were being carried out by Mr. Hutchins at Southampton; and, at the same time, the defendants were carrying on similar operations at Ryde, in the Isle of Wight. In the course of this work, the plaintiff became acquainted with the defendants; and on the 12th of July he called at their office, and said that he was employed in getting jobs on Government contracts. One of the defendants replied, if the plaintiff could get them a job, they would amply remunerate him. On the 14th August the plaintiff called again, and produced the plans and estimates of some earthworks at Fort Monckton, near Gosport, for which tenders were asked. It was arranged with Mr. Bennett that if the defendants obtained the contract they were to pay to the plaintiff 100*l.* for his trouble; but if they did not get it, they were to pay the plaintiff nothing. The tender was at once drawn up, and sent in to the Ordnance-office, and the defendants obtained the contract. The price at which they were to do the work was 1,868*l.*

Mr. Bennett, one of the defendants, and a clerk, who was present during part of the interview, denied that any arrangement was made to pay the plaintiff 100*l.* It was, however, admitted that the plaintiff was entitled to some remuneration, and 25*l.* was paid into court to satisfy any demand he might have.

Evidence was called to show that in the event of there having been no specific agreement, the 25*l.* was a sufficient sum to be paid to the plaintiff.

His lordship left it to the jury to say whether there had been any express agreement as to paying the plaintiff 100*l.* and if not, whether the 25*l.* paid into court was sufficient.

The jury considered the matter for one hour, and then gave their verdict for the plaintiff for 25*l.* beyond the sum paid into court.

Notices of Books.

VARIORUM.

A SEVENTH edition of the charming book of Messrs. Kirby and Spence on Entomology has just been issued by Messrs. Longman and Co. at a sixth of the cost of the previous edition. It also contains an Appendix relative to the origin and progress of the work. This is a delightful companion for an idle hour, especially in the country, and even in his profession the architect himself may thence obtain some useful knowledge: witness what is said on page 288 as to the habits of the Scolytus destructor, in "destroying in a great degree the effect of one of the most vaunted and costly productions of modern architecture." We must refer to the volume itself, however, for further light on this and other subjects.——"The Art of making Catalogues of Libraries" is a half-crown pamphlet by a Reader in the National Library at the British Museum, and is "published and sold by [at ?] the Literary, Scientific, and Artistic Reference Office, 10, Brownlow-street, Holborn." It developes "a method to obtain in a short time a most perfect, complete, and satisfactory printed catalogue of the British Museum Library." The scheme whereby it is proposed to settle this vexed question is too elaborate for explanation here, but it seems to display a good deal of thought and experience. The author properly divides the subject into what regards the merely inventorial catalogue, and what relates to the index or finding catalogue, the former not being necessarily an arranged or classified one, but the latter necessarily being so, and based upon the former, though much more brief in its titular indications, while full and comprehensive in its corelative and classified references. The library authorities have the Inventory but not the Index, or most essential catalogue; and if any writer can induce them to produce the latter in a short time, the public will be deeply indebted to him, and ought to show their gratitude by presenting him with a handsome testimonial.——The one hundredth part and last but two of Messrs. Longman's "Travellers' Library" has been issued. It contains Mr. Auldjo's still interesting "Narrative of an Ascent to the Summit of Mont Blanc" in 1827. This was one of the first published narratives of this now frequent feat, and it may be read with some interest in connection with another small volume just issued by the same publishers, and titled, "Where there's a Will there's a Way;" being an account of "An Ascent of Mont Blanc by a new Route and without Guides," by the Rev. C. Hudson and M. E. S. Kennedy, both of Cambridge. The motto on the title-page of this latter lively little volume, taken from Murray's "Handbook for Switzerland," is to the effect that "it is a somewhat remarkable fact that a large proportion of those who have made this ascent have been persons of unsound mind." Doubtless, the local guides ranked Messrs. Hudson and Kennedy, at all events, in the "unsound" list; but these gentlemen themselves are of opinion that "all such spirits" as the mounters of Mont Blanc "must be good fellows," and we are inclined to agree with them as to the "jolly" correlatives of the enterprising spirit which prompts the young and vigorous to the arduous and somewhat dangerous task. But surely there has been enough of it now, unless some additional motive turn up than merely the desire to accomplish it as a gymnastic feat.

Miscellanea.

OLD ST. PANCRAS-ROAD. — A WORD TO THE WISE.—Permit me to call attention, through the medium of your columns, to the state of the footways in the upper portion of St. Pancras-road. Very nearly opposite the toll-gate and crescent is a line of low, dirty-looking, once suburban, cottages: they are not only dirty, however, but dilapidated. *Lamps* there are few, if any. The footway in front might rival the primitive state of Balaklava itself: in fine weather, the ancles are twisted by the uneven earth; in wet weather, the person is bespattered in tramping through the unseen puddles with which it is lined. There is some attempt, a little lower down, by way of a central slab of paving, to give one a notion of being in a civilized country, but for the most part it is as I describe, as well also on the opposite side of the way, viz. the pathway round the square or crescent. I am not aware whose business it becomes to remedy this, but, having "hit the right nail on the head" once or twice previously, by your favour, I am led to hope a similar result, which may lead to the increased convenience and comfort of the public frequenting that locality, in respect of adequate paving and lighting being substituted for the present darkness and discomfort in that locality abounding.—OMNIBUS.

INVENTORS' AID SOCIETY. — The preliminary meeting of an Inventors' and Patentees' Mutual Aid and Protection Society, was held on Monday week, and the initiative taken towards the furtherance of its objects. It proposes to assist its members, or their nominees, in securing the protection or registration of inventions, and to afford capitalists and patrons of art and science an assured method of appropriating funds to approved scientific objects. It also proposes to appropriate one moiety of any profits which may arise, after paying a dividend of 10 per cent. to a fund for assisting members in sickness, adversity, or distress. All inventions patented and carried out by aid of the society, are to be transferred to it as security for repayment of sums advanced, and priority of protection is to be decided by ballot.

THE BOURNE VALLEY POTTERY.—As touching our article of last week, we hear with regret that the Bourne Valley Pottery was totally consumed by fire on Wednesday morning last, in the short space of one hour. The front or old pottery was built chiefly of wood: the new pottery in the rear—a very substantial brick building within which four new kilns had been erected—and the new steam machinery just set in motion, has nothing left but the bare walls. A great many persons will be thrown out of employment for some time.

THE BROMPTON-ROAD.—A correspondent suggests, in connection with the handsome roads forming by the Royal Commissioners on the Kensington-gore estate, the necessity for improving the Fulham-road from Knightsbridge to Brompton-square. "The row of houses called Brompton-row stands back at some distance from the road, the intervening space between them and the road being little different from a piece of waste. Some rank grass and a poplar here and there are growing on it, and it is in places partially inclosed with shabby fencing, but on no uniform plan, so that it is neither a piece of ground common to these houses, nor is it divided into parts and apportioned to them severally." His idea is to do with this strip of ground as has been done at Westbourne-terrace and at Gloucester-gardens, on the Paddington estate. Next to the high road (Fulham-road) form a handsome paved footway, say of 16 feet width. Let this footway be bounded on the north side by a dwarf wall and balustrading, or by an iron railing in stone curb, leaving sufficient openings in it for a convenient carriage access to the houses of Brompton-row. Within the wall and balustrading a row of limes might be planted, and a strip of turf or of gravel laid down. Next this strip a carriage-way for the houses of Brompton-row, and then the pavement immediately in front of the houses.

THE PEOPLE'S PARK FOR WOLVERHAMPTON.—A numerous meeting was held at Wolverhampton last week to promote the revival of this project. Mr. Hartley, who had offered 1,000*l.* conditionally on the former attempt which failed, was present, and promised to subscribe liberally after seeing what the working classes of the town were inclined to do for themselves in the matter. Mr. S. Griffith stated that he had just been promised 300*l.* towards the object in view.

AN ASTONISHING MEMORY.—Excavations are in progress at Holyrood, and the archæologists are on the look-out for what may turn up. One was at the heels of an Irishman, the other day, on the site of the old church, built, he told him, many centuries ago; and, while Pat was plying his pick, Monkbarns exclaimed to him,—"Take care! there must be a pillar there!" The next stroke of the pick (says the *Ladies' Own Journal*) alighted on the base of the shaft. Turning round with an indescribable look of bewilderment, and scratching his head, the Irishman said;—"By the powers what a mimory your honour has!"

INSTITUTION OF MECHANICAL ENGINEERS, BIRMINGHAM.—The general meeting of this institution was held on 30th ult. at the house of the institution, in Newhall-street, Birmingham, Mr. B. Fothergill, Vice-President, in the chair. Several new members having been elected, a paper was read, giving a description of an improved foundry hoist and cupola, by Mr. John Fernie, of Derby. The next paper was a description of a double slide expansion-valve for marine engines, by Mr. F. W. Wymer, of Newcastle-on-Tyne. The third was "On Waddell's Improved Packing for the Slide Valves of Marine Engines," by Mr. Charles Beyer, of Manchester; and the last "On an Improved Construction of Link Motion for Locomotive Engines, &c." by Mr. Alexander Allan, of Perth.

THE BIRMINGHAM "RECREATION SOCIETY."—At the evening meetings of this new society, as many as 1,500 people, at a penny a head, have attended—the ordinary attendance being 500. The receipts of the society are 20*l.* per week, the expenses 6*l.* For this they provide swings, an electrical machine, single-stick and fencing, gymnastics, reading, &c. There are also musical performances by a band and chorus formed by the members. The rooms are open from five to ten on week-days, and from two till ten on Sundays; and the whole is conducted with order and decorum, showing what working men can do for themselves, and forming an example well worthy of imitation.

METROPOLIS LOCAL MANAGEMENT ACT: SECT. 143.—It may be as well to remark, that no specific "modus operandi" is pointed out to be observed in the abatement of works alleged to be contrary to this Act. Are the vestry to proceed in a body armed with pickaxes to commence an assault; and, by committing a trespass on private property, provoke a breach of the peace? or are rich rewards to tempt any one to lead a "forlorn hope?" or is the parish engine to be brought up?—CAVENDO TUTUS.

Manchester School of Art. — The annual meeting of this school was held at the Royal Institution, Manchester, on Monday before last, Mr. Edmund Potter, president, in the chair. The chairman regretted the want of support under which the school languished, its existence being supported chiefly by a few friends instead of the public at large; and he should be glad to see the Royal Institution take the school by the hand, and relieve it from its heavy rent of 200*l*. At present 1,000*l*. a year were spent in educating 200 or 300 pupils, which was too much, though the education was of a high quality. The receipts were nearly equal to the expenditure: the subscriptions were about 300*l*. a year. About 100 pupil teachers paid 3s. a quarter. The secretary read the report. Efforts were being made to extend the benefits of the school by establishing a class for artisans, and by giving instructions in public schools at a low charge. Mr. Hammersley, the head master, reported that the school had maintained a steady course of improvement, the studies of the pupils being more numerous, and of a higher quality than before. In the first quarter the pupils numbered 458, in the proportion of 363 males and 95 females; second quarter, 194; third, 181; fourth, 204: total, 1,037, or an average of about 250 per quarter. The school fees amounted to about 200*l*. The Government grant was 380*l*.; annual subscriptions, 295*l*.; making, with private donations, school fees, &c. about 1,000*l*.; and there was a balance owing of 374*l*. Mr. Bazley regretted the withdrawal of a portion of the Government grant, which was last year 220*l*. less than it used to be. It would be disgraceful if such a useful institution lacked support.

Bristol Fine-Art Academy.—The annual meeting of the members and friends of this institution was held on Thursday in last week. There was a numerous attendance. Mr. P. W. S. Miles, who presided, opened the proceedings by referring to the new building now in course of erection, which he said was progressing satisfactorily. The committee hoped that in the course of the present year, about September or October, the roof would be put on, and that at this period next year the annual meeting, not only of this institution, but the School of Art and the Society of Architects, would be held within its walls. The architectural portion of the work had been done entirely by the Society of Architects gratuitously. In the original design, the building was intended to be erected in a much plainer form than had since been thought desirable. This alteration was made at the suggestion of Mr. Thomas, of London, the sculptor. The five windows will be filled up with different groups of sculpture. Mr. Tucker read the report, which alluded to the services of Mr. Underwood and Mr. Hunt, the two architects who planned and designed the building. The elevation of the edifice is in the Italian style, from four designs by Mr. Hunt. It is approached by a double flight of steps, leading into the vestibule. The building will contain spacious exhibition-rooms, and a room appropriated for the requirements of the Fine Arts Institution. Accommodation will also be provided for the School of Practical Art. The principal front will be ornamented with emblematical groups, designed and executed by Mr. Thomas, provided the necessary sum can be raised by independent subscription. This will involve an outlay of 300*l*. towards which 70*l*. have already been subscribed. The report was received and adopted.

Public Baths for Stoke.—In compliance with a numerously and respectably signed requisition, the chief bailiff of Stoke convened a public meeting on Tuesday before last, in the New Market-hall, Stoke, to devise the best means of establishing public baths in the town. The project owes its origin to Mr. Herbert Minton, who offered 500*l*. towards the formation of cheap baths. A confident and practical spirit pervaded the meeting, and gave promise that the liberal and philanthropic intentions of Mr. Minton will ultimately be accomplished. Appropriate resolutions were passed, one for the appointment of a committee, and another to the effect, that Mr. Lynam, architect, should be requested to furnish the committee with plans and estimates; and that after the design had been approved of by the committee, lithographs of the elevation should be furnished and extensively distributed.

"Racquet Courts" are to be built on the Pavilion land, near Sloane-street, Chelsea, Mr. Thos. Burton, architect. Tenders were received on the 30th ult. ranging from Lindsay, 999*l*. to Ashby and Sons, 830*l*.

A Profitable Speculation.—A short time since some few citizens bought 2,000*l*. worth of slates, and sent them out from Bristol to Melbourne, consigned to Messrs. Miles and Kington, when they quickly received back for their 2,000*l*., 4,000*l*. or cent. per cent. on the speculation. So that, if there have been a great many losing ventures to the Antipodes, there have been some profitable ones also.—*Sherborne Journal.*

Suffolk Institute of Archæology, &c.—The eighth annual meeting of this society was held on Thursday in last week, at Norton, and was attended by a large party. The first point of re-union was Thurston church, where, in the absence of the President, the Rev. Lord Arthur Hervey, the Rev. W. Spring Casborne was invited to assume the office of president for the day; and Mr. Tymms read a paper descriptive of the architectural peculiarities of the church. The party then proceeded to Little Haugh Hall, Norton, the seat of Mr. P. Huddlestone, and thence to the National School-room, the walls of which had been covered by rubbings of brasses, and where a number of antiquities and fossils had been arranged. The Rev. Henry Creed having been called to the chair, the secretary read the report, which congratulated the members on the satisfactory progress of the society. Various communications were then made, presents announced, and objects exhibited, and the company afterwards went to the church, and thence to the Great Oak.

Gas. — The works of the new Gas Company at Stockton are commenced, under contract, by a firm in Leeds, and will be erected on land purchased from the corporation, on the north side of the town, near the Leeds Northern Railway Station. 13,000 yards of pipes are to be laid. The bricks for the buildings are being made on the land, and the whole is to be finished and in operation by October next, when the contract to supply the public lamps with gas at 3s. a thousand feet, commences. The old Gas Company have given notice that they will reduce the price in October to 2s. 6d. a thousand feet, a concession made too late to be at all meritorious.

The Wrexham School of Art.—Some months since, says the *Wrexham Journal*, Mr. Ellis A. Davidson, the head master of the Government School of Art, at Chester, delivered a lecture in the Wrexham Music Hall on the subject of "Useful and Ornamental Art." The purpose of the lecture was to introduce to the people of that town Mr. Davidson's plan of opening a branch of his school at the Savings' Bank, Wrexham, the use of which building has been kindly granted by the trustees. The branch School of Art was accordingly opened in August last, Mr. Davidson devoting the whole of each Thursday to that town. A select class for ladies, a class for daughters of tradesmen, &c. and a general and artizans' class, meet at the Savings' Bank; and Mr. Davidson also attends, for one hour, at Mr. Floater's academy, and one hour at the British school. The success attending the labours of the students has been very satisfactory, and the classes are really conferring a great boon on the town. In the select ladies' class, we understand, carving in wood, modelling in clay, oil painting, water-colour and chalk drawing, are constantly proceeding; whilst, in the artizans' class, the students are busily engaged on freehand, ornamental, and model drawing, modelling, machine and architectural drawing, geometry, perspective, ornamental, and flower painting, and also on copper-plate and silver engraving. One moment's reflection, remarks the paper just named, must prove to workmen of every sort how important a knowledge of form, size, and colour is to them. Every bricklayer will lay his bricks better, every carpenter will work better, every turner will turn better, and every mason will cut stone better, if his eye and hand have been in some degree educated. How often do we see persons disappointed when the workman brings home something they have ordered, and how frequent is the exclamation, "Why this is not what I meant." Now, why is this? It is because the employer and employed have not possessed a knowledge of that language which is more eloquent than words, and more explanatory than whole pages of print, viz. a *knowledge of drawing.*

Bridge-building in Australia.—The ceremony of opening the Victoria-bridge, built across the Nepean river, at Penrith, took place, says the *Australian and New Zealand Gazette*, on New Year's-day last. This long-sought-for object opens a highway across the Nepean into the great western interior of New South Wales. The first pile of the bridge was driven on 1st of March, 1854. It spans the river in one of its noblest reaches, the length being 700 feet, the total width 30 feet. The total depth from the platform to the bed of the river varies from 17 to 20 feet. The structure is very plain. It is composed of a platform covering piles, and is almost entirely of the iron bark of the colony: it will cost about 10,500*l*.

Tunnelling Rocks.—Mr. C. Wilson, of Springfield, Massachusetts, has taken out a patent for machinery for tunnelling through hard rocks, consisting of a continuously revolving wheel, provided with circular rolling discs or cutters, regulated so that their axes stand alternately in opposite directions, nearly at an angle of 45 degrees with the shaft of the cutter wheel, thus continually cutting away the substance acted upon.

Welding Steel.—Mr. H. Anderson, of Garratsville (U.S.), has secured a patent for an improvement in welding steel, in the specification of which the patentee states that he is aware that alkalis have been before used for the purpose, both simple and compound; but his claim is for a compound of sulphate of soda and carbonate of soda, as a vehicle in the welding of steel and securing strength at the junction.

TENDERS

For building a stack of warehouses in Cannon-street West, for Messrs. Moses, of Tower-hill. Messrs. Tillott and Chamberlain, architects. The quantities supplied:—

Cubitt and Co.	£14,937	0	0
Piper and Sons	14,860	0	0
Haward and Nixon	14,476	0	0
Ashby and Sons	14,396	0	0
Ashby and Horner	14,040	0	0

Brass and Sons	13,972	0	0
Myers	13,846	0	0
Holland and Co.	13,796	0	0
Hill	13,389	0	0
Jay (accepted)	13,266	0	0

For additional steam-power buildings for the Plumbago Crucible Company's works at Battersea. Mr. Leicester, architect. Quantities supplied by Mr. T. B. Knightley:—

Freeman	£2,124	0	0
Downs	1,860	0	0
Rider	1,770	0	0
Coleman	1,672	0	0
J. and C. W. Todd	1,498	0	0
Willson (accepted)	1,483	0	0

For building "Half Moon" public-house, Rotherhithe-street, for Mr. Flowers:—

Hedges	£1,249	0	0
Hill	1,235	0	0
Wilson	1,224	0	0
Wood	1,180	0	0
Perry (Hackney)	1,167	0	0

For building villa at Horsham, for Mr. Braby:—

Lee and Son	£3,650	0	0
Lawrence	3,234	0	0
Lucas	3,180	0	0
Mansfield	3,120	0	0
Holland	2,908	0	0
Perry	2,793	0	0

For building Midland Counties Insurance Offices, at Lincoln. Messrs. Bellamy and Hardy, architects. Quantities not supplied:—

Ward	£2,780	0	0
Cave	2,740	0	0
Huddleston	2,718	0	0
Sharman and Lee	2,663	0	0
Biott	2,618	0	0
Barnes and Birch (accepted)	2,567	0	0

For the erection of new residence and offices for the Equitable Gas Light Company, at Pimlico. Mr. James Howell, architect:—

Rigby	£2,710	0	0
Lawrence	2,674	0	0
Jay	2,698	0	0
Piper and Son	2,629	0	0
Lucas, Brothers	2,616	0	0

ADVERTISEMENTS.

WINDOW-BLINDS. — J. FULLER, Manufacturer, 29, Charlotte-street, Blackfriars-road. Established, 1850.—Venetian Blinds, from 10s. each, or 8d. per foot; Wire ditto, 7s. each, or 1s. 9d. per foot; Holland ditto, from 5s. each, or 5d. per foot. Every other description of Blinds equally low, warranted of the best manufacture. Discount to Builders and the Trade. Fixed complete.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

BUILDER'S FOREMAN WANTED.—Must be competent to superintend the several branches.—Apply at MILFORD WHARF, Strand.

TO CLERKS OF WORKS.

WANTED, for a Public Building in the Country, a CLERK of the WORKS.—Apply, stating references and salary required, to Messrs. BEADEL, SON, and CHANCELLOR, Architects, &c Chelmsford.

WANTED, in a Surveyor's Office, a good LAND SURVEYOR, who is a fair Draught man and Ornamental Writer. His principal occupation will be to take plans of houses for drainage purposes, which he must do quickly and accurately. The engagement may last a long time.—Address, by letter, stating any salary required, and references, to H. G. H. 1, Vicarage-place, Camberwell.

TO PIPE-BURNERS.

WANTED, a Person who thoroughly understands the BURNING of GLAZED SANITARY PIPES. Apply by letter, post-paid, to Mr. T. LANGHAM, Birchwood Collieries, near Alfreton.

WANTED, an ARCHITECTURAL DRAUGHTSMAN, accustomed to prepare finished and working drawings, take out quantities, &c.—Address, stating terms, A. B. care of Mr Wharton, Stationer, Blackburn.

WANTED, by a Company about to commence the Working of Granite Quarries in the county of Cornwall, a duly qualified AGENT, to conduct the Company's Business in London.—Applications to be made, by letter, to T. C. T. King's Newspaper Office, Chancery-lane.

TO PLUMBERS, CONTRACTORS, AND OTHERS.

WANTED, by a Young Man, a PLUMBER, who thoroughly understands glass cutting, glazing and lead glazing, a SITUATION. He is willing to fill up his time with painting. No objection to the country.—Address, A. B 46, Seymour-street, Euston-square

TO BUILDERS AND CONTRACTORS AT LIVERPOOL.

WANTED, as full or partial employment, by a re-pectable Middle-aged Man, an ENGAGEMENT as CLERK or SUPERINTENDENT. He is well acquainted with office duties, as measuring and estimating, and is a good accountant.—Address, Z. Z. Office of "The Builder."

TO PLUMBERS, &c.

WANTED, by a Young Man, a SITUATION as PLUMBER, and to fill up his time in painting and glazing, if required.—Address, H. H. Office of "The Builder."

TO MASTER PAINTERS AND BUILDERS

WANTED, by a Young Man, a SITUATION as GRAINER. Would have no objection to filling up his time with plain writing and painting. No objection to the country.—Address, G. SINCLAIR, Post-office, Camden-town, London.

TO ARCHITECTS, SURVEYORS, AND BUILDERS

WANTED, a SITUATION in either of the above Offices, as CLERK, by a Young Man who is a neat draughtsman and quick accountant. Satisfactory references can be obtained from his late employers. Salary not so much an object as a permanent engagement.—Address, O. Z. Office of "The Builder."

TO BUILDERS, CONTRACTORS, &c.

WANTED, by a respectable Young Man, a SITUATION as CLERK. Has been employed in several first-rate London offices. Address, F. T. 89, Drummond-street, Euston-square

WANTED, by a Young Man, aged 27, a SITUATION as TIMEKEEPER, STOREKEEPER or in any other capacity. Would be willing to make himself generally useful. Unexceptionable references.—Address, H. D. 9, Wirtemberg-place Brixton-road

WANTED, a SITUATION as CHIMNEY-POT and DRAIN PIPE MAKER, or Manager of a Small Kiln in the Country.—Address, H. G. 8, Randall's Cottages, Maiden-lane, Kings cross, London

TO ENGINEERS, SMITHS, PLUMBERS, GAS-FITTERS, &c.

WANTED, to APPRENTICE a YOUTH, from the country, aged 14, to either of the above trades. A premium will be given, if required.—Address, stating particulars, to S. W. 31, Theobald's road, Red Lion-square.

WANTED, by an experienced Man, a SITUATION as PLUMBER, GLAZIER, and PAINTER. Can be well recommended.—Address, A. B. 10, Edmond's-terrace, Old Ford, Bow, Middlesex.

TO WINDOW-GLASS CUTTERS, BUILDERS, &c

WANTED, by an experienced middle-aged Man, a SITUATION as CUTTER and GLAZIER; competent in painting, accounts, &c. Address, J. C. P. 15, Exmouth-street, Euston-square.

WANTED, a SITUATION as SHOP FOREMAN of JOINERS; with good references. Age, 36. J. K. H. 84, Upper Eburn-street, Pimlico.

TO ARCHITECTS, &c.

A TEMPORARY or permanent ENGAGEMENT required by a first-rate DRAUGHTSMAN, who has had ten years' experience in preparing drawings and superintending works: is thoroughly acquainted with office duties, and can assist in taking out quantities. No objection to the country.—Address, A. E. 54, Alder-gate-street

TO ARCHITECTS.

A GOOD DRAUGHTSMAN is open to an ENGAGEMENT. He has had experience in the offices of architects of repute and is competent in the Italian, and Gothic architecture, and has also been accustomed to make out perspective, working, and detail drawings. First-class references. Salary, moderate.—Address, A. D. C. Mr. Daniel Bette's, 13, Cook's court, Lincoln's-inn

TO WHEELWRIGHTS.

A YOUNG MAN wishes to ENGAGE himself, for a short term of years, as an IMPROVER.—Address, W. F. 78, Harrow-road, Edgware-road.

TO ENGINEERS, ARCHITECTS, AND SURVEYORS

A GENTLEMAN, of respectable connections, is open to an ENGAGEMENT as ASSISTANT in either of the above capacities; has a thorough practical knowledge of surveying and levelling, the construction of maps, plans, sections, &c. as well as drawing and colouring of architectural plans and elevations. A moderate salary only expected.—Please address, SURVEYOR, care of Mr. J. R. Taylor, Law Stationer, 84, Chancery-lane, London.

TO ARCHITECTS, BUILDERS, &c

A RESPECTABLE Young Man is in WANT of a SITUATION in an architect's or builder's office. Salary a secondary consideration, as improvement and a permanent situation is the object required. Address, J. M. Messrs. Morris and Phillips's, Builders and Decorators, 3/4, Oxford-street.

ACCOUNTS.—A Young Man, used to the work, wants a SITUATION, employing part or the whole of his time in BOOK-KEEPING or CORRESPONDENCE, or if requisite, will fill up his time with Ornamental Drawing or Carving.—Address, I. H. G. 4, Beaufort-buildings, Strand.

TO NOBLEMEN, GENTLEMEN, OR BUILDERS.

A THOROUGHLY Practical Man, of fifteen years' experience in first-class buildings, solicits an ENGAGEMENT as MANAGER or GENERAL FOREMAN to either of the above. Satisfactory references given.—Address, H. R. Office of "The Builder." No objection to the country.

TO ARCHITECTS, BUILDERS, AND OTHERS.

A COMPETENT Person, of good practical experience, who has had the management of very extensive public and private works, and has been accustomed to the management of steam-engines, sawing and other machinery, is desirous of a RE-ENGAGEMENT as CLERK of WORKS or GENERAL FOREMAN. First-rate testimonials and security if required. Locality no consequence.—Address, M. A. F. Office of "The Builder."

A YOUNG MAN, aged 23, most respectably connected, wishes to be received as IMPROVER, in a Builder's Establishment, where business transactions are not on a limited scale. The advertiser flatters himself that he would be found a useful hand at the bench, where the work is varied. Was five years with his late employer.—Address, X. X. Office of "The Builder."

PARTNERSHIP or otherwise.—A Practical Builder by trade, whose knowledge of business is based upon many years' experience as manager in one of the largest building establishments in London, is desirous of connecting himself with one of the mercantile branches of that business, where his experience as the man-general of the office, and his energies in the extension of the connection's saleable, together with the introduction of 1,000*l.* capital, might be considered a desirable addition to a business requiring further assistance in its management and open to further development.—Apply by letter to Mr. GEORGE ABBOTT, care of Mr. French, Printer, 66, Tabernacle walk, Finsbury.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT. —Second Testimonial.—"March 10th, 1853.—In reply to our letter, received this morning, respecting the Gutta Percha Tubing for Pump service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

CHAS. MACINTOSH and CO. Patentees of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS of WATERPROOF, AIRPROOF, and ELASTIC RUBBER GOODS beg to inform all persons who desire to correspond with them direct, that their SOLE ESTABLISHMENTS are No. 3, Cannon-street West, London, and Cambridge-street, Manchester. This notice is necessary, as the term Macintosh Depôt, Macintosh Warehouse, &c. is frequently adopted both in London and the country by vendors of India-rubber goods, who deal in articles not of the manufacture of CHAS. MACINTOSH and CO.—Goods manufactured by CHAS. MACINTOSH and CO are stamped with the name of the firm.

ROYAL POLYTECHNIC.—Patron, H.R.H. PRINCE ALBERT.—Whitsuntide Holidays. A New and Grand series of Forty Magnificent Dioramic Pictures, illustrating Bunyan's Pilgrim's Progress, with appropriate Music from Mendelssohn, Spohr, Haydn, and Handel; and Descriptive Lecture by the Rev. J. B. Brasted. New Lecture by J. H. Pepper, esq. on "The Moon Controversy," and other Scientific Subjects. The Historical Entertainment of Kenilworth, with New and Beautiful Dioramic Effects, and Description by F. Lenox Horne, esq. Graphic Pictures of the total Destruction of Covent-garden Theatre. Engagement of G. Barker, esq. for Lectures on Music, and of Mademoiselle Mundie and Herr Zirom for Performances on the Cither and the Emmelynka. New and very large Model of Sebastopol showing the Attack and Defence, and mounting 2,000 cannons and mortars. Lectures by Mr. Wyld on the new metal Aluminium, and on Herr Paul Preta's new process of Galvanography, or Printing by Light and Electricity.—Admission to the whole, 1s.; children and schools half price.

KENT'S PAINTING-BRUSHES are of the very best quality, and may be obtained at all the first houses in the trade, and of the manufacturers, G. B. KENT and CO. 11, Great Marlborough-street, London. Established 1777.

N.B. Kent's Painting Brushes are all stamped G. B. KENT & CO.

Price Lists forwarded by post.

IMPORTANT to BUILDERS and PAINTERS.—Genuine White Lead, 23*s.* per cwt.; Linseed Oil, 3*s.* 8*d.* per gallon; Boiled Oil, 3*s.* per gallon; Turpentine, 2*s.* 8*d.* per gallon; Fine Pale Oak Varnish, 7*s.* 6*d.* per gallon. For cash, at EDWARD PRICE'S Oil and Colour Warehouse, 45, Coleshill-street, Pimlico.—Every articles for the trade at the lowest price.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank street, Westminster, who prepare one quality only (Portland Cement).

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT. CHARLES NELSON, having completed his works for the manufacture of the above Cement, can supply Contractors, Builders, &c. with a very superior article. The manufacturing department being under his own immediate superintendence, he can confidently recommend it for all works in which Portland Cement is used, and only requires a trial to insure approbation.

Orders, addressed to
London Depôt, 16, South Wharf, Paddington,
BLYTH, BROTHERS, Sole Agents,
will meet with immediate attention.
Manufactory—Ewe-cote Mills, Warwick.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT, Messrs ROBINS and CO. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

PORTLAND and BATH CEMENTS. TATHAM and CO
14, South Wharf, Paddington.

SOUTHAM BLUE LIAS LIME DEPOT.
Glazed Stoneware Sewage Pipes.
Brick, Lime, and Cement Merchants,
TATHAM and CO
14, South Wharf, Paddington.

PORTLAND and ROMAN CEMENT. PLASTER of PARIS
Manufactured by J. M BLASHFIELD, at Millwall, Isle of Dogs. Warehouse, No. 1, Wharf, Paddington-basin.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail at his wharf, 8, Upper Thames street, London; and also at the manufactory, Faversham Kent. N.B. These Cements supplied for shipment, on advantageous terms.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris, White, Mastic, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the best quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccos dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting cement, that resists no colourns.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

DOVERCOURT CEMENT WORKS, HARWICH, ESSEX.
JOHN PATTRICK being now the only ROMAN CEMENT Manufacturer at Harwich, informs the public that he continues to carry on a Wholesale business, and offers to Contractors, Builders, &c. for the freight or half freight, ROMAN CEMENT of best quality, and manufactured terms.—Applicati n either at Harwich or to his Agent, GEORGE MORRIS, 20, New Common street, Queenhithe, London.

P.S. Inland London trade will in future be supplied from Messrs ROBINS and CO Scotland-yard, Westminster, instead of Whitefriars.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, burial work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling cornices, decorations, &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the market. Communications to be addressed to the General Offices, 50, Old Broad-street, London; to Mr MCNUMENT, 4, Carnarvon-place, City-road, to Mr. TIMEWELL, the Depôt, 3, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

PORTLAND and ROMAN CEMENTS.—T. H. BOORMAN, WILD, and CO. MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester. Agent at the Works—Mr. THOMAS WEEKES.

HUBBUCK'S WHITE BODY PAINT of superior body to the Best White Lead, whilst it is as smooth and permanent as Zinc Paint. One coat laid on as directed is equal to two coats of White Lead; whilst the consumption of material is less than for one coat. It dries very fast and hard.

HUBBUCK'S STONY COLOUR BODY PAINT the same as the former, at three fourths the price.

HUBBUCK'S PATENT WHITE ZINC PAINT is invaluable for Iron Ships and iron exposed to salt water; neither bilge water, nor noxious vapours from cargo, nor heat on funnels of Steam Vessels act upon it. Sold by the Wholesale Paint Dealers, in original packages, stamped, Hubbuck, London, PATENT; and when so marked the quality is guaranteed.

HUBBUCK'S COPPER COLOUR ENAMEL PAINT prepared expressly for the bottoms of Iron and Wood Steam Ships, a protection from rust and incrustation. Timber coated with this Enamel is not attacked by the worm neither do barnacles attach to it.

Full particulars of THOMAS HUBBUCK and SON, Paint and Varnish Works, opposite Shipher's, &c.

OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

FREEN and CO.'S PORTLAND CEMENT and LIME WORKS, WOULDHAM, near Rochester.—These Works having obtained Letters Patent for the Manufacture of Cement, by which very great and important advantages are obtained over the old method of manufacture, insuring at once uniformity of colour and quality. Merchants, Contractors, and Builders are informed that they can now be supplied with any quantity, either for home or foreign markets, for wholesale orders, on advantageous terms.—Samples and prices forwarded, on application at the Works; or to Mr. W. E. ATKINSON, 62, Moorgate street, City; from whom also testimonials from eminent engineers as to quality may be obtained.

BLUE LIAS LIME.—CHARLES NELSON begs to inform Engineers, Architects, Contractors, Builders, and the Trade in general, that he is prepared to supply direct from the Works in his own boats to any part of the Thames, Rivers Lee, on any canal or by rail to all parts of the kingdom, large quantities of the above GENUINE HYDRAULIC LIME now so extensively used.

Quality, Weight, and Measure may at all times be strictly relied on, references in proof of the above can be given.

N.B. The Captain of the Boat will always bring with him the Grand Junction Canal Scale, from which the contractor will be enabled to know exactly what weight of Lime he is paying for

All orders addressed to the—
LONDON DEPÔT, 16, SOUTH WHARF, PADDINGTON.
BLYTH, BROTHERS, SOLE AGENTS,
Will be promptly attended to, and any further information can be obtained from them
Works, Stockton-field, near Southam, Warwickshire.

PLASTER of PARIS.—MESSRS. BLYTH, BROTHERS, beg to acquaint the trade, that they have made a considerable reduction in price; the quality they are now manufacturing cannot fail to give entire satisfaction. Samples and prices forwarded to any part of England, or the metropolis. No extra charge made to any wharf or railway station in London.—Any further information can be obtained at their Works, Baldwin's-place, Gray's-inn-lane, Holborn; or at the Blue Lias Lime Depôt, 16, South Wharf, Paddington.

GREY STONE LIME WHARFS, 13, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.
Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 8d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Birmtnaham and Oxford Line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway.—Greaves's Blue Lias Lime.—Portland, Bath, and Lias Cement.—Works, at Harbury, Stockton, and Wilmcote.—Office, at Warwick.

GREAVES'S BLUE LIAS LIME.—The above Lime supplied direct from the works to wharfs along side the rivers or canals, railway stations, or vessels in the docks. A large supply always in stock.—CHARLES RICHARDSON, Brick, Lime, and Cement Merchant, 3 and 6, South Wharfs, Paddington.

NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME.
WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that they can obtain the best quality ground and lump into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

JOHNS and CO.'s PATENT PERMANENT STUCCO WASH (perfectly non-absorbent) STUCCO CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road. Office, 4, George-yard, Lombard-street.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock and to select for themselves.

Malm Place half-washed Stocks, and Place Bricks, also on sale These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hatton-field, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of a proved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Loam, Moulding, Whiting, Sand for sulphate, Land Drain Pipes, Paving Tiles and Pipes, Gas Soil for brick-making, &c. &c. sent by barge from Messrs MELSON and CO.'s Works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 300 to 600 tons can load at a spade the shores at Grays. At MELSON and CO.'s wharf and kilns, Bow-bridge, Stratford, Essex, the above-named articles can also be procured, as well as all kinds of fire goods, both Welsh and Newcastle, fire-clay, Flare-burnt Lime, and Marble and Temper Lime; and here lime is packed in hogsheads, casks, and &c for exportation
General Office—No 13, GEORGE-YARD, LOMBARD-STREET.
Letters addressed to Grays Essex, will meet with immediate attention

AND CROWN WHARF, GREAT SCOTLAND-YARD

BRICKS, of first-rate quality and good colour, TO BE SOLD for CASH; suitable for fortifications, or work where great strength is required.—Apply to Mr. W. SMITH, Brick-wharf, Grosvenor road, Thames-bank, near Pimlico Pier.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boys to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 1st, 1856.—Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

TWO MILLIONS of STOCK, KILN, and other BRICKS FOR SALE, at the Crystal Palace Brick and Tile Company's Works, Lordship-lane, Dulwich. Price of good stock bricks, 25s. per hundred on the field, for cash.—Application to be made to the Foreman, A. BARHAM, at the Works.

THE PATENT BRICK MACHINE COMPANY invite orders for their IMPROVED MACHINES. One of them is working in a field at Caterham, near Croydon, and arrangements are made with the owner for bearers of a letter from the Secretary, to see it in operation every Thursday and Friday.
HENRY C. MOUNT, Sec.
37, King William Street, City.

IMPORTANT to BUILDERS.—GREAT REDUCTION in the PRICE of BRICKS.—BRICKS delivered to any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 25s. per thousand; Grizzles, 20s. per thousand; Rough Ditto, 20s.; Place, 13s. to 15s. per thousand.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES,
For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile, and other structures.
SOLE AGENT,
J. B. LAWES, 1, Adelaide-place, London-bridge.
This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it, or convey the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.
Price 4d. each tile of about 13 inches long; seconds and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 8d. per foot. This charge to include tiles delivered in Agent's yard, cement, and labour. May be had in London, Gloster, Bridgwater, and Rugby.

PEAKE'S TERRO-METALLIC TILES,
PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 881, of the Great Exhibition, rank the Manufactories known as long as "La Terre Pierre," Tunstall, Staffordshire, as the first of the kind in the world.

TO BRICKLAYERS, &c.—TO BE LET, an old-established JOBBING BUSINESS in the City, suitable for an industrious Young Man wishing to commence.—For cards apply to Mrs. LLOYD, No. 52, Gloucester-street, Bloomsbury.

TO RAILWAY COMPANIES and CONTRACTORS.—TWENTY quite new BALLAST-WAGGONS, for permanent way, have never been in use, precisely as those of the Great Northern Railway Company, well suited for mineral purposes; 400 Contractors' Earth-Waggons, side and end tips, with narrow way, coupled or 50 Sets Cast iron Wheels and Wrought Axles, pedestals, tip gear, straps, bolts, &c. the ironwork complete for wood waggons.—Apply to MATTHEW T. SHAW, Contractor for every description of Railway Plant and Stores, 64, Cannon-street, City.

TO BUILDERS.
MONEY at 4½ per Cent.—A Gentleman wishes to INVEST £6,000 by way of MORTGAGE, in one or more sums, upon either leasehold or freehold property, subject to long unexpired terms. Applications from principals or their solicitors by letter only, to F. R. S., care of G. J. RHODES, Esq. Accountant, Lincoln's-inn-fields Chambers, London.

MONEY ADVANCED.—FREEHOLD LAND, very eligibly situated in Gloucester-road and Fulham-road, Regent's-park, TO BE LET on BUILDING LEASES, for a long term, at fixed rate ground rents, for the erection of third-rate houses. Advances may be made on the buildings by the proprietors.—Apply to J. G. ELDART, Esq. Solicitor, 53, Great James-street, Bedford-row

METROPOLITAN LOAN COMPANY, Established 1838.
CRAVEN STREET, STRAND, LONDON.
Loans are advanced in amounts varying from 10l. 10s. to 100l. repayable weekly or otherwise, as may be agreed upon, at a discount of 2½ per cent. for twenty one weeks, and 5 per cent. for 50 weeks at 5 per cent. Forms may be had, price 2d.; if by post, three postage stamps to be enclosed. ROBERT NORTON, Secretary.

TUDDENHAM, IPSWICH, BRICK AND TILE WORKS.

EXPOSITION UNIVERSELLE de 1855.

Medaille de 2me Classe awarded to JAMES LUFF, for Specimens of Ornamental Bricks and Tiles.

JAMES LUFF

Begs to inform Architects and Builders that he MANUFACTURES all KINDS of ORNAMENTAL BRICKS and TILES, Red and White, for Chimney Shafts, Ridge Crests, Cornices, and Mouldings.

Also, all KINDS of ORNAMENTAL VASES, CHIMNEY-POTS, MALT-KILN TILES, DRAINING-PIPES, and TILES of every description.

N.B. Builders furnishing detailed drawings can have all sorts of Ornamental Designs executed.

ANCIENT HOUSE FURNITURE

In order to supply the deficiency which has hitherto existed in Furniture suitable for the many Mansions that have been erected or restored in the MEDIÆVAL STYLES, Messrs. CHACE have directed their particular attention to this subject, in addition to their other works, and have prepared appropriate specimens in the various branches of Furnishing.

STUFFS for HANGINGS, in simple Worsted Damask, in Silk; also in Tapestry of Bauderkin.
CARPETS, plain or in rich Velvet pile, with appropriate Borders.
PAPER-HANGINGS of various kinds.
OAK CABINETS, Buffets, Octagon Library and Occasional Tables, Benches, Chairs, and other useful and appropriate Furniture
The whole of the above-mentioned Furniture, &c. is designed by the late Mr. A. W. PUGIN, Architect.
To render this Furniture generally available, a considerable portion has been arranged in the simplest manner, consistent with it ancient character.
14, Wigmore-street, January, 1852.

WATERLOO BRIDGE WHARF, Commercial-road, Lambeth.—These desirable FREEHOLD PREMISES, with 10 dry arches under the Waterloo-bridge Road, TO BE LET on LEASE or SOLD.—For particulars apply to HENRY MOTT, Esq Solicitor, 4, King's-road, Bedford-row.

BUILDING GROUND, between the CITY and WEST END, or near the WEST-END.—WANTED, a PLOT of GROUND, or BLOCK of OLD HOUSES, for a Factory about 6,000 square feet, with good side-lights Frontage or good locality not indispensable. The business could not be objected to.—Address, A. G. Mr. Latchford, 61, Wardour-street, Soho.

MAITLAND-PARK, HAVERSTOCK-HILL, HAMPSTEAD-ROAD, land-tax redeemed.—TO BE LET, upon building leases, for ninety-nine years, desirable BUILDING SITES upon the above Estate. The continual demand for houses in this locality, and the picturesque position of the property, adjoining the grounds of the Orphan Working School, render this a desirable opportunity for builders or gentlemen wishing to erect villas for themselves.—For plans and terms apply to the Secretary of the Orphan Working School, 32, Ludgate-hill; Messrs. TERRELL and CHAMBERLAIN, 30, Basinghall-street; the Architects, Messrs. WEHNERT and ASHDOWN, 42, Charing-cross; or at the Lodge attached to the school.

TO BUILDERS and OTHERS.—TO BE LET, on building lease for eighty years, or the FREEHOLD TO BE SOLD, by Tender, the valuable and extensive PREMISES, No. 17, GREAT PRESCOTT-STREET, WHITECHAPEL.—Any particulars required, may be obtained on application to Messrs. SMITH and WILLIAMS, Architects, 7, Frederick's-place, Old Jewry, at whose Office the Tenders are to be delivered, sealed and endorsed, stating intended outlay and rate of rent/sec, on or before MONDAY, 19th MAY next. The highest or any of the Tenders will not necessarily be accepted. If desired the house and premises adjoining, and being No. 16, in the occupation of Mr. Moses, may be included in the Tender.

MARINE.—FREEHOLD BUILDING LAND.—FOR SALE, about SEVEN ACRES, at Hythe, Kent, having nearly 470 feet frontage southward towards the sea, and 680 feet frontage to an excellent road on the west. The plot is capable of being laid out in sites for the erection of upwards of sixty semi-detached and other houses, with gardens and pleasure-ground. The Corporation of Hythe have laid out upwards of 2,000l in the erection of an ornamental building with warm baths immediately adjoining the site, and have also formed an excellent promenade protected by a sea-wall next the beach. The inland scenery is extremely beautiful, and the surrounding country abounds with excellent driving roads and pleasant walks. In consequence of Her Majesty's Government having established at Hythe a school for musketry in connection with the Minie rifle practising ground, there is an increasing demand for houses in this place, with but little accommodation at present; it is therefore presumed that it would be an eligible investment for capitalists, builders, and others.—Further particulars may be obtained on application to Mr. E. B. WILSON, Architect and Surveyor, No. 7, Frederick-place, Gray's-inn-road, London, where plans of the property may be seen.

BUILDING LAND at HATFIELD, Herts.—TO BE LET, on building leases for sixty years, very desirable PLOTS of LAND, for building purposes. The land is within a quarter of a mile of the railway station at Hatfield, fronts the high road to St. Albans, and from its situation is well calculated to afford a means of supplying the existing demand for villa residences in this locality. The soil is gravel, and there are brickfields on the land in the immediate neighbourhood.—For further particulars, apply to RICHARD NICHOLSON, Esq. Solicitor, 4, Old Palace Yard, Westminster.

TO ARTISTS, READING-ROOM PROPRIETORS, AND OTHERS.

MR. LEREW is directed TO LET a well-fitted ROOM lighted with gas, lately used as a small chapel, but previously as a studio. There are also three good dwelling-rooms, kitchen, &c. in excellent repair and advantageous situation.—Apply to Mr. LEREW, Auctioneer, Cardington-street, Hampstead-road, near the Euston Station.

WANTED, a detached FAMILY COTTAGE.—The Surrey side would be preferred; distance, about six or eight miles from the City, and near a rail, containing not less than five bed-rooms. A good garden and dry situation, with a good supply of water, is indispensable. Rent, including use of fixtures, about 60l. per annum.—Address, post-paid, to A. Z. Messrs. Mann, Nephews, 39, Cornhill.

STRATFORD, ESSEX.—FREEHOLD LAND, within three miles of London, exonerated from land tax and free of tithe, To BE LET, on Lease, for a long term of years, in large or small plots, suitable for manufactories or building purposes.—Apply to Mr. W. H. DEAN, Auctioneer and Surveyor, Stratford; or to Mr. GEORGE POWNALL, Surveyor, 37, Bloomsbury-square, London.

AN ARCHITECT of more than thirty years' practice, retiring from the profession, wishes to LET or PARTIALLY LET his OFFICES.—Letters, post paid, to A. Z. at Elphinstone's, the corner of Hanover-street and Regent-street.

TO LET, convenient BUILDER'S PREMISES, in Cromer-street, Gray's-inn-road. Mr. STARK, the present tenant, will show the property. Applications to be made to Messrs SLEE and ROBINSON, Solicitors, Parish-street, St. John's, Southwark.

NASCOTT-PARK, WATFORD.—FREEHOLD BUILDING LAND TO BE LET, on LEASE, or the FREEHOLD TO BE SOLD. The situation is excellent close to the railway station, seventeen miles north-west of London, and abuts upon the splendid property of the Earl of Essex. Water supply of the finest quality, the soil is gravel and chalk, new roads and foot-paths laid out, and a new church in course of erection upon the land.—Further particulars may be had, and plans may be seen on application to Mr. HUMBERT, Land Agent, Watford; or to Mr. HENSON, No. 43, Parliament-street, London.

TO BE SOLD, with immediate possession, the remaining portion of a valuable PLOT of GROUND, sufficient to build seventy houses or villas upon, each house having a frontage of 23 feet, forming the best part of a fine wide street, thoroughly drained with a large new sewer, each end of the street leading to a great thoroughfare, where omnibuses pass to London every few minutes (the other part of the ground, to build sixty houses upon, was let in twelve months). It is held on lease from the copyholder for ninety-nine years from October, 1854, and will be sold upon the following most advantageous terms: one-third of the purchase-money to be paid down immediately and the remainder in two years.—For further particulars, apply to Mr. MAYNARD, Plumber, Shepherd's-bush, Hammersmith, Middlesex.

TO SCULPTORS, STATUARIES, and MASONS.—The LARGEST and MOST PROMINENT PREMISES in LONDON being completely surrounded with squares and houses of the first class, and no great distance from the cemeteries, commands a private trade, quite sufficient, and close to the site of the new National Gallery, and 3½ miles of new roads already formed, for the erection of first-class residences. The present proprietor has had the patronage of the first of the nobility for the last twenty-five years, and now has ill health. As a specimen, the show-room is 100 feet by 60 feet, the fore court-yard 60 feet square, to display monumental and other works. The manufactory is close at hand, with residence for foreman. There are 2,000l worth of orders, which the purchaser will have the benefit of. The lease, stock, and implements are to be sold at a certain sum, and not a thing to be removed. The present proprietor will render, if required, his services for a limited period.—For further particulars, apply on the premises, Keppel-place, Fulham-road, Brompton.

AN ARCHITECTURAL and SURVEYING PRACTICE, in the South of England, TO BE DISPOSED OF, on very moderate terms.—Address, DELTA, 24, Murray-street, New North-road, Hoxton.

TO POTTERY PROPRIETORS, MINERAL, CHEMICAL, and COLOUR MANUFACTURERS.—TO BE DISPOSED OF, the PLANT and MACHINERY of a small Concern, comprising two large mills, with washing-tubs, kilns, and all necessary appurtenances; a quantity of Derbyshire stone, and a six-horse steam-engine and boiler. The machinery has been lately erected, and is disposed of on account of the Proprietor giving up business.—Apply, for further particulars, to AUGUSTUS SMITH, Auctioneer and Valuer to Engineers and the Metal Trades, 235, Blackfriars-road, near the Bridge.

TO MANUFACTURERS, PIANOFORTE-MAKERS, CABINETMAKERS, and others requiring roomy Premises.—TO BE LET, near the North-Western Railway Terminus, Euston-square, very commodious PREMISES, consisting of large workshops, newly built, three stories high, about 3,000 square feet in each floor (suitable for warehouses), a counting-house, yard, &c. and good entrance to the same.—For particulars apply at Mr. HINGSTON'S Office, 1, Stanhope-terrace, Gloucester-gate, Regent's-park; or to Mr. LEREW, 3, Cardington-street, Hampstead-road.

TO CARPENTERS AND BUILDERS.

FOR SALE, at a low price, several well-built SIX-ROOMED CARCASSES, near Victoria-park, in a rapidly-improving neighbourhood, where houses of this class are much required, and which let and sell rapidly. To respectable men, cash will be liberally advanced to assist in completing them. Term, 100 years. Ground-rent moderate.—For further particulars apply to Mr. GEO. CLARKSON, Surveyor and Land Agent, 48, Penton-street, Pentonville.

TO BUILDERS, CONTRACTORS, AND OTHERS.

TO BE DISPOSED OF, a BUSINESS, carried on for some years with good success by the Advertisers, in and around a seaport town in the West of England. The premises, near the waterside and most convenient, may be rented or purchased.—For particulars, apply to Messrs. W. and T. MAY, Builders, Stoke, near Devonport.

TO BUILDERS, CARMEN, and Others.—A BARGAIN.—TO BE SOLD, an excellent CART-HORSE, the owner having no further use for him. Apply at 35, Pickering-place, Paddington.

PARSEY'S REVOLVING STEAM-ENGINES and PUMPS (the accomplishment of circular motion).—As steam engines, are better than all others; and as pumps, being all metal, are equally good for hot or cold liquors; and having no packing, are not liable to choke, and are a vast improvement on pumping and for ships' pumps.—To be seen at Mr PARSEY'S Depôt, Great Scotland-yard.

TO BUILDERS

PLASTERING DONE for the TRADE, with or without material and scaffolding, by SAMUEL BRETT, 23, Southwark-bridge-road, Pittinaters given for the lump, or by measurement. Plasterers' work measured and valued. Scaffolding, Ladders, &c. to let.

TO ARCHITECTS, SURVEYORS, CHURCHWARDENS, &c.—S. TAYLOR, GENERAL HOUSE DECORATOR, of No. 1 and 2, Albany-place, Kentish-town-road, having repaired and re-decorated St. Pancras Church, New-road, and St. Mary's Church, Islington, by Contract, is willing to give ESTIMATES for Repairing and Decorating Churches, Chapels, Public Buildings, or any description of House Property.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s. per foot super together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

ACTUARY—Arthur Scratchley, M.A. F.R.A.S.

This Society grants every variety of Policies on any number of Lives, and to any amount, for which the payments can be made by such arrangements as may be most convenient.

By a valuable New Principle, originated by this Office, Policies effected in it do not become VOID, through the temporary inability of the Assurers to pay a premium; as permission is given, upon application, to suspend the payment, at interest, according to the conditions detailed in the Society's Prospectus.

The attention of the Public is confidently invited to the several Tables and peculiar advantages offered to Assurers, which will be found fully detailed in the enlarged Prospectus of this Society.

The Third Division of Profits will take place at the close of the year 1859, of which parties assuring their Lives by the Society's Table II. will be entitled to three-fourths, or 75 per cent. without partnership liability. As an example of the previous Divisions, a "Policy issued in the year 1842 for 3,000l. has already had 504l. 12s. 6d. allotted to it at the close of the year 1854."

THE PHOTOGRAPHIC ASSOCIATION (LIMITED). Provisionally Registered.

SECRETARY

Professor Brewer, M.A. F.R.G.S. King's College.

This Association has been formed for the advancement of practical and scientific Photography. It proposes to apply Photography—1. To medical, scientific, literary, artistic purposes, and to portraiture especially. 2. To take fac-similes of deeds, papyri, autographs, inscriptions, early-printed books, and manuscripts. 3. To open rooms for instruction in Photography. 4. To collect patterns of apparatus and specimens of chemicals for Photographic purposes, tested under the superintendence of first-rate chymists. 5. To aid the topographist and illustrator. 6. To print negatives for amateurs and shareholders. 7. To form a library connected with the art for purposes of consultation. 8. To establish a general central place of meetings, for foreign, provincial, and metropolitan Photographers connected with the Association.

It has been satisfactorily ascertained, that after payment of all expenses and setting aside a reserve fund, a dividend of at least 10 per cent. with other advantages detailed in the prospectus, may be expected by the Shareholders.

For Prospectus and Shares, apply to No. 4, Trafalgar-square, London, the offices (pro tem.); or to the Secretary or the Solicitor.

B. FOWLER and CO.

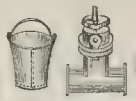
SOLE MANUFACTURERS OF HOLMAN'S PATENT DOUBLE-ACTION CESSPOOL, SEWER FLUSHING, LIQUID MANURE, AND UNIVERSAL FORCE PUMP.

The simplest, cheapest, and best thing of the kind before the public; admirably adapted for thick substances; raises way three times usual size, made to suit liquors of all kinds, hot or cold, portable or fixed, with perfect ease. Delivers a large quantity at small labour. A really good article, commanding extensive home and export sale.

ON SALE AND HIRE,

SINGLE AND DOUBLE PUMPS IN WROUGHT IRON

TO ANY DEPTH,



FOR BUILDERS, CONTRACTORS, EXCAVATORS, WELL-SINKERS, &c.

Sizes, from 3-inch to 15-inch barrels.

N.B. The Largest Stock in London for hand or steam-power, and for every possible purpose for which a Pump is required upon the largest or smallest scale in Wrought or Cast Iron, Copper, or Brass.

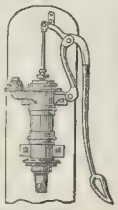
B. FOWLER and CO.'S

FARM and COTTAGE PUMPS, 30s.

All sizes and descriptions of Pump, in various plain or ornamental patterns, for public places; for deep or shallow wells. Brass Lift Pumps, Engine Frames, Horse-gear, Cranks, Pulley Blocks, Wrought Pails, and Rabbish Baskets, Sewer Lamps, Sluice and Hot-Water Valves, at lowest prices.

N.B. Every attention paid to country and export orders for the trade. Experienced workmen sent to any part of the kingdom.

BENJAMIN FOWLER & CO. GENERAL ENGINEERS, WHITEFRIARS-STREET, FLEET-ST.



TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP, which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage-work is dispensed with, and the pump is rendered the most comfortably lasting in Pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth of twenty feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

R. RICHARDS and CO.

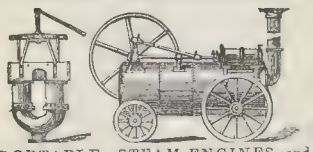
Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12 in. diameter, kept ready for use at reduced prices.



N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 36s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

TO BE SOLD.—A GREAT BARGAIN.—A powerful 16-horse HIGH-PRESSURE FIXED STEAM-ENGINE, with large boiler and apparatus, in good working condition. It has been used a short time in a paper-mill, but the power is more than is now required, and a small tubular boiler would be purchased or taken in exchange.—Further particulars and price may be known, by applicant, to Messrs. SURRIDGE and SONS, Land Agents &c Tuworth Hall, and Halstead, Essex.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street Blackfriars-bridge (Surrey Side.

PATENT TERRA-COTTA.

Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crosses, Label Mouldings, Friezes, Trusses, Vases, Balusters, Capitals and Bases of Columns, Paving, Facing Bricks, Coping, Kitchen and other Sinks, Chimney Shafts, and Tops, and numerous other Articles, manufactured by J. M. BLASHFIELD, in Patent imperishable Terra-Cotta, at Mill-wall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington basin.

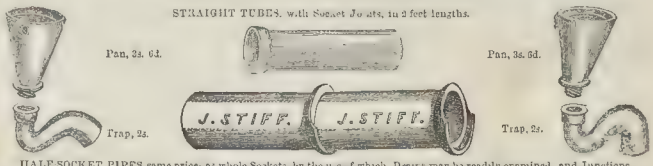
THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that may be sold at cheap rates as Pure Oxide of Zinc. If any adulteration be taken from the oxide, either in consequence of impurity in the ores, or primarily inside the oxide produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior article instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very extensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BURDELL, SONS, and Co., who grind and sell dry. In Newcastle, T. B. MOORE, agent to and for the Company's Grinding Agents in London, Messrs. CHARLES DEAVEY and Co., Wholesale Agents, 82, King William-street, City; and by the Manufacturing and Painting Agent, Mr FREDK. BRABY, Surrey Works, Newroad. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the sole authorized Agent for the Company for Zinc Paints, and no brushes paint ing ships, watch-boxes, iron-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-boards and Slating Complete. In Mr. H. F. BUCHAN. Dry OXIDES and PAINTS, in wood casks, 1 cwt and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Co. may also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.



GREAT REDUCTION IN PRICES.

IMPERIAL POTTERIES, LAMBETH.

S. G. wishes to call attention to his WHOLE and HALF-SOCKET PIPES, made on the principle of PILBROW'S IMPROVED REBATED SOCKET-END, which fully secures a joint free from obstructions, and meets the demand for removing Pipes at any point.

5s. 6d. each; if fitted with PATENT AIR-TIGHT VALVES, 1s. 6d. each extra.

Also to his IMPROVED REGISTERED CLOSET PAN, with an impervious White Glaze inside, and formed to insure a Flush of Water over the entire Internal Surface. Made with or without STEPHEN GREEN'S PATENT AIR-TIGHT VALVE on the top of the Trap.

N.B. Prospectuses, with Prices and Terms, forwarded post-free, as also Prospectuses of STEPHEN GREEN'S PATENT SELF-ACTING FLUSHING CLOSET, complete, with Seat and Riser, &c.

AYLESFORD POTTERY COMPANY,

BELVEDERE-ROAD, LAMBETH.

MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

The above Company having now been in existence for nearly six years, and having during this period supplied DRAIN-PIPES, &c. to some of the largest Works in and around London, viz.:—The New Cattle Market, Wellington and Chatham Barracks, Deptford Dockyard, Her Majesty's Commissioners of Works, &c. and in all instances parties using them expressing themselves satisfied therewith,—take this as a fair test of the quality of the articles supplied by them; and as they now feel themselves established as Potters, beg to offer their goods to Contractors, the Trade, &c. of a first-rate quality and manufacture, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERS' ASSOCIATION.

REDUCTION IN THE PRICE OF CLOSET-PANS.

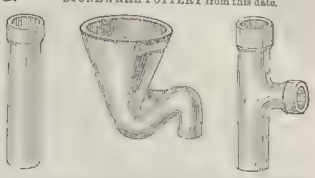
DOULTON AND WATTS,

LAMBETH POTTERY, HIGH-STREET, LAMBETH,

Have reduced the Price of their PATENT ENAMELLED CLOSET-PANS WITH TRAPS, to

5s. 6d.

These Pans, therefore, which have a strong Vitrified Body, as well as a White Interior Glaze, may now be obtained at the price of the commonest description of Closet-pans.



SUPERIOR STONEWARE GLAZED

PIPES of a quality not to be surpassed.—E. and W. STURGE respectfully invite attention to the very superior character of their stone pipes, which they are confident are such as must give great satisfaction,—the price being also lower than many in the trade, viz. 25 per cent. discount off the list for cash. Junction Bends, &c. Pans and Traps of the first quality. Yorkshire Paving, Sinks, Sills, &c. all at low cash prices.—E. and W. STURGE, Bridge Wharf, City-road.

N.B. A small extra charge is made upon goods required to be delivered.—October 1, 1855.

GREAT REDUCTION in the PRICE of

STONEWARE POTTERY from this date.

VICTORIA POTTERY, LEIGH, near SOUTHEND; London Establishment, Falcon Wharf, 85, Bankside.—DAVID MOUNTAGUE, Manufacturer of every article of Lambeth POTTERY, having now further reduced the prices, begs to offer to consumers and others, STONEWARE PIPES &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application as above.—Feb. 11, 1856.

PATENT DRAIN-PIPES, UNGLAZED,

manufactured by ARTHUR C. FRANCIS and CO. Grays-Essex. Sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.

PRICES

3 inch bore, in 2 ft. 6 in. lengths, at					3d. per foot.
4	"	"	"	"	4d. "
6	"	"	"	"	6d. "
9	"	"	"	"	9d. "
12	"	"	"	"	1s. 5d. "
15	"	"	"	"	2s. 6d. "

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

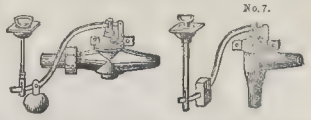
TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES

FREEMAN ROE'S PATENT SLUICE-

VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

PATENT SELF-ACTING WATER-



CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principle, fabricating with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE POWERFUL FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen at the Premises of the Patentee, W. PATTEN, 32, Old Fish street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 25s. and perfect action guaranteed.

LAMBERT'S SELF-CLOSING

LAVATORY AND CLOSET VALVE

No. 7.

is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 10 to 200 feet: they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS LAMBERT and SON,

Brass Founders and Engineers,

Corner of Short-street, New Cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price complete, 13s. 6d. each.

TO WATER COMPANIES AND PLUMBERS

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

TO CLOCK-MAKERS. — EIGHT-DAY

CLOCK WANTED for the CASTLE CARY MARKET-HOUSE, Somersetshire. The clock will have to be placed in a roof, on timbers capable of bearing a weight not exceeding 10 cwt. The fall available for the weights is about 25 feet; but 15 feet would be rather more convenient. The rods which give motion to the hands, &c. must be carried along the roof horizontally about 25 feet; afterwards vertically about 10 feet, into an open lantern having four sides, on each of which there is to be a pierced dial, resembling a wheel, with six spokes, 3 feet 6 inches in diameter. The works to include a train for striking the hours and quarters on a bell already fixed in the lantern, weighing 9½ lbs. TENDERS to be sent to Mr. RUSS, Solicitor, Castle Cary, on or before SATURDAY, the 24th inst.

Dated Castle Cary, May 1st, 1856.

SALES BY AUCTION.

TO NOBLEMEN, GENTLEMEN, ARCHITECTS, BUILDERS, LANDSCAPE GARDENERS, AND OTHERS. — Second Annual Sale of the valuable and beautiful Materials manufactured by Messrs. Page's Patent Artificial Stone.

MESSRS. MANSELL and ELLIOTT are favoured with instructions from the Directors of the Company, to SELL by AUCTION, on the PREMISES, Whitehall Wharf, Pimlico, Westminster, on TUESDAY, MAY 13th, 1856, and two following days, at TWELVE for ONE o'clock precisely, in lots adapted for private purchasers, the trade, and shippers, a well-selected assortment from the extensive stock at Ipswich of ITEMS adapted for ornamenting ecclesiastical building, mansions, and cottages, designed in the various style of art, before the first-rate artists, including an entire Gothic screen, worked a two-piece screen, chimney pieces, basso and alto reliefs, pillars, pilasters, entablatures complete, capitals, cups, lace, cornices, panels, bases, pedestals, vases, tazzas, and architrave, tracery, tablets, tunnel arched and plain balustrading, gate and other piers, pedestals in great variety, terminals, ashlar quoins, copings, and strings in fine stone. The garden decorations comprise fountains, shell and rock work, figures, vases, tazzas, flower stands and boxes, fern tazzas, sundial pedestals, and terrace balustrading. The miscellaneous articles consist of coats of arms, turrets, pinnacles, fonts, mural tablets, tombs, and every item that can be made in wrought or sculptured stone. Messrs. Mansell and Elliott beg to draw especial attention to this important sale, for the Patent Siliceous Stone is superior, in appearance and durability, to any other stone, being unaffected by weather, and while of extraordinary capabilities of application are too numerous to particularise in an advertisement, they invite an inspection of the materials. The Whole may be viewed three days prior to the sale, and catalogues had four days prior on the Premises, and at the Offices of Messrs. Mansell and Elliott, Auctioneers and Valuers, Belgrave-square (corner of Halkin-place), 12, Birchin-lane, Cornhill, from which printed copies may be had.

TO IRONMONGERS, CABINET-MAKERS, BUILDERS, TRUNK MAKERS AND OTHERS.

MESSRS. FULLER and HORSEY are instructed to SELL by AUCTION, on TUESDAY, the 20th of MAY, and following day, at ELEVEN precisely, on the PREMISES, St. James's walk, Clerkenwell-green, in lots (the proprietor of upwards of five thousand), the STOCK of IRONMONGERY, 2,800 dozen locks complete, wrought and cast hinges, a large assortment of brass cabinet-work, bell work cench bolts and nuts, 60 gross of wood screws, bags of wrought and cut nails, new Bilston grained japanned tinned and Lancashire tools, 10 dozen of spades and shovels, three tons of castings in sash weights, doors, false bottoms, gratings, &c., 200 enamelled iron chemical pans, 50 register stoves, fenders, black hollow ware, japanned ware, copper goods, and a large assortment of general ironmongery. To be viewed on Monday previous to the Sale, when catalogues may be had on the Premises, and of Messrs. Fuller and Horsey, Billiter-street, City.

The spacious Premises to be Let.

TO ENGINEERS, SMITHS, IRON MERCHANTS AND OTHERS.

MESSRS. FULLER and HORSEY are instructed by the trustees to SELL by AUCTION, at the IMPERIAL IRON WORKS, Wenlock road, City-road, on MONDAY, MAY 19, at ELEVEN, valuable ENGINEERING TOOLS and STOCK, powerful cutting and punching press, screwing machine, strong slitting saw two inches, two large presses, three power horizontal steam-engine and boiler, two Lloyd's fans, shafting and riggers, wrought-iron tank four iron and seven brick forges, fourteen anvils, 5 tons smiths' tools, 80 tons bolt and bar iron in sheets, cast iron pipes and bolts, corrugated iron roofing, and other effects. To be viewed on SATURDAY previous to the sale, when catalogues may be had on the Premises; and of Messrs. Fuller and Horsey, Billiter-street, City.

TO TIMBER MERCHANTS, CONTRACTORS, BUILDERS, BARGE AND SHIP BUILDERS, AND OTHERS.—Mr. Thomas Freeman having removed the largest portion of his valuable Timber, Deals, and Battens, at the Spa-road Station on the Greenwich Railway, and known as the Spa-road Timber-yard, Bermondsey, where he intends, for the future, to carry on only his Deal and Batten business.

MR. PEAKE, to SELL by AUCTION, in lots, on THURSDAY and FRIDAY, the 15th and 16th days of MAY, each at TWELVE o'clock, on the Premises, the PREMISES, viz., the New-walk, Shad Thames, Bermondsey, and the Railway Arches abutting the Jamaica-road, Bermondsey, a portion of the STOCK, consisting of about 1,000 loads of DEALS, and BATTENS, sawn and unsawn; twenty loads of prime Dantzic timber, in logs; large scantling, 12 feet of sorts; 2 by 6 inch, skirting, 18 inches of 12 inch by 3 inch; a quantity of pine plank, flooring boards, and various &c. May be viewed the day prior to and mornings of sale; catalogues obtained on the Premises, New-walk, Shad Thames, Bermondsey; also at Mr. Peake's Offices, 44, Tooley-street, and 4 Pair-street, Southwark.

NEAR THE RAILWAY STATION AND TOWN OF EPSOM, SURREY.—The STOCK of a BRICK-YARD, comprising about 4 millions of first BRICKS and TILES, &c.

MESSRS. WHITE and SONS, on the PREMISES, on TUESDAY, MAY 13, 1856 at TWELVE o'clock. The above quantity is composed of 3,000 bob, best building bricks, of fine-rate colour and quality, 300,000 stock, place, and grinell bricks, well manufactured, and of a good colour, 8,000 rubbers, 1,000 plain and moulded tiles, which will be divided into lots to meet the convenience of purchasers. Every facility for removing the stock is afforded by a tramway, from the Croydon and Epsom line, which runs into the yard. — Catalogues may be had on the premises; of Mr. Wright, Stationer, 91, Farringdon-street, London; of Mr. Johnson Hands, at his Patent Brick and Tile Works, Epsom; and of the Auctioneers, Dorking, who will be attending at the Land Improvement Office, Chancery-lane, London.

CHELTENHAM. Valuable Property and Building Land in the Suburbs.

MESSRS. BEADEL and SONS have received instructions from the Proprietors, to SELL by AUCTION, at the Plough Hotel, Cheltenham, on THURSDAY MAY 15, at TWO for THREE o'clock in lots, the valuable PREMISES known as the Bath Nursery, Malvern Road, Prestbury, consisting of about 4a. 3r. 36p. of Freehold land. Lot 1 will comprise the extensive and valuable range of premises situate at the corner of Bath-road and Oriel terrace, with a commanding frontage of 220 feet; this block of building includes the Montpellier Baths and dwelling-house, in the occupation of Mr. Jones, who is desirous to quit at Michaelmas next; the bakery, with shops, ovens, fittings, &c.; the mill, with machinery driving two pairs of stones, and the dwelling at present used as the manufactory for Cheltenham salts; the fittings to the baths, the hot-house, greenhouses, pinery, vineries, peach-houses, and all the machinery and fixtures in and about the premises being lot 2; these will be offered in the progress of the sale. The remaining lots will consist of freehold and copyhold building land, admirably adapted for the erection of villa residences, fronting the Malvern-road, close to Christ Church, and within a few minutes' walk of the Montpellier Gardens. Further particulars, with conditions of sale and lithographic plans, may be obtained fourteen days prior to the sale of Messrs. J. C. and H. Beadel, Solicitors, New-street, Cheltenham; of the G. H. Hussey, Esq., Solicitor, Bristol; of Messrs. Waterhouse and Bell, Cheltenham; at the Place of Sale; and of Messrs. Beadel and Sons, 25, Gresham-street, London.

Freehold Land, in Plots, conferring votes for Middlesex, Kent, and Surrey.

MR. TINDALL, will SELL by PUBLIC AUCTION, on WEDNESDAY, MAY 14, at the AUCTION MART, by order of Messrs. Hughes, Hibbs, and Hughes, ST. MARGARET'S ESTATE, Richmond; SIX PLOTS at FOREST-HILL; ONE PLOT at HORNSEY-RISE; first-rate situations for villa residences. A large PLOT at BOW, close to the Victoria-park, set apart for five capital shops, and an exceedingly valuable PLOT, on the CAMBERWELL-road, of eight lots, especially reserved for the erection of a public-house license certain. Particulars may be had of Messrs. Hughes and Lewis, Solicitors, 14, New Boswell-court; at the Red Cap, Camberwell green; Hanley Arms, Hornsey-road; Star and Garter, Richmond; Telegraph Hotel, near the Railway Station, Forest hill; Marquis Cornwallis, Old Ford-road; and at the St. John's wood Estate Office (where plans of the estates may be seen), 28 Portland-terrace, near St. John's-wood Chapel.

SALES BY AUCTION.

HATTON-GARDEN.—Peremptory Sale of the Plant and Effects of a Builder and Sewer Contractor; and Lease of the Premises.

MESSRS. EVERSFIELD and HORNE will SELL by AUCTION, on the PREMISES, Bleeding Heart-yard, Charles-street, Hatton-garden, on TUESDAY, MAY 20th, the valuable PLANT and EFFECTS, consisting of a large quantity of plank, deal, and battens of various dimensions, scaffold boards and poles, ladders, sinks, cesses and troughs, iron and sewer centres, blocking-boxes, paling-boards, and work, benches, iron pumps, screw-jacks, blocks and falls, a pug-mill, gully gratings, crane barrows and boxes, trolleys, iron wheelbarrow plates, painted 1s. stone paving, and asphaltum grate, iron work of various descriptions; also, two excellent builder's carts, set of cart harness, tarpaulins, hand chaff-boxes, two portable counting-houses, office fittings, and numerous other effects. At the same time the Lease of the Premises, at 100l. a year. May be viewed one day previous and catalogues had on the Premises, and of the Auctioneers, 40, Parliament-street, or Coal Exchange.

Valuable Materials of the temporary buildings erected in the Crystal Palace, Hyde Park, and Victoria Park, for the use of her Majesty's Government, in connection with the forthcoming display of Fireworks, on the 20th, to celebrate the return of Peace.

MESSRS. EVERSFIELD and HORNE are honoured with instructions to SELL by AUCTION, on the PREMISES, known as the Crystal Palace, the MATERIALS, FITTINGS, and FENCING, comprising a very large quantity of timber, of the most useful description, in framed principals, inch boarding, 3-inch planking, and quarterings; also the glazed sashes, doors, and other fittings; the whole of which have been selected with a view to conversion, and will be put in suitable lots.—Further particulars and the days of sale will be shortly announced, and any party wishing for a catalogue, may have it sent, post-free, by forwarding his address to the Auctioneers, 40, Parliament-street, Westminster.

ST JOHN'S WOOD. Leasehold Premises with Workshops.

MESSRS. EVERSFIELD and HORNE will SELL by AUCTION, at the MART, on TUESDAY, MAY 13th, at TWELVE, by order of the mortgagees, a substantial brick built RESIDENCE, containing four rooms with workshops, yard, and stabling, situate on the south side of Clifton-road, St. John's-wood, held for an unexpired term of 96 years, at a ground-rent of 8l. The premises are in hand, but of the estimated value of 80l. May be viewed, and particulars had of J. Cundy, Esq. Solicitor, 10, Great Cattle-lane, Peckham Common; at the Mart; and of the Auctioneers, Coal Exchange, or 40, Parliament-street, Westminster.

PIMLICO.—Marble Chimney pieces.

MESSRS. EVERSFIELD and HORNE are instructed to SELL, early in JUNE, at the MARBLE SHOW-ROOMS, Belgrave place, about 150 MARBLE CHIMNEY-PIECES, several of which are richly sculptured, and others of a plainer character.—40, Parliament-street.

BUILDING MATERIALS, WATER-LANE.

MESSRS. EVERSFIELD and HORNE will SELL by AUCTION, on the PREMISES, Waterlane, Strand, on FRIDAY, APRIL 18, at TEN for ELEVEN, the MATERIALS and FITTINGS of SIX HOUSES, being Nos. 9, 10, 11, and 12, Water-lane, and two houses at the rear, of the usual description; to be taken down by the purchasers.—May be viewed one day previous, and catalogues had of the Auctioneers, 40, Parliament-street, Westminster.

PORTPOOL-LANE.—Valuable Builder's Stock of seasoned Timber, Plant, Implements and Effects, on the Premises of the late Mr. Newton.

MESSRS. EVERSFIELD and HORNE are instructed by the Executors to PREPARE for SALE, in LENT, the FIRST PORTION of the valuable STOCK and EFFECTS, which will comprise a large quantity of well seasoned yellow and white deals and battens, prepared floor-boards and battens, pine plank, matched boarding and skirting, die square timber and scantling, fir, pine, and mahogany planks, mahogany and pine steps, slabs, and paving; also, several lifting carts, stone trucks, and timber carriage; scaffold boards, poles, and putlogs; crane and scaffold ropes; ladders, sinks, cesses, and troughs; planks, barrows, pile driving engines; and numerous saw tackle, the contents of the joiner's, plasterers', painters', and smiths' shops; forty work-benches, and numerous other effects.—The days of sale will be shortly announced; and catalogues will be sent, post-free, on application to the Auctioneers, 40, Parliament-street, Westminster.

TO BUILDERS, CARPENTERS, AND OTHERS.

MR. LOUND will SELL by AUCTION, on MONDAY, MAY 26, by direction of Mr. Roberts, Builder and Carpenter, who is retiring, all those capital PREMISES, situate in DUDDY-COURT, Silver-street, within a few paces of Wood-street, comprising a convenient dwelling-house, extensive, lofty, and light workshops, saw-pits, yard, and sheds, very easy of access from the street, and suited for any business requiring spacious premises, in one of the most important parts of the City of London; held under Christ's Hospital, for a long term, at the low rent of 45l. per annum; the purchasers have the option of purchasing the timber, stock-in-trade, &c.—May be viewed, and particulars had of the Auctioneer, 49, Chancery-lane.

BUSHEY, NEAR WATFORD, HERTS. Valuable Freehold Building Land.

MESSRS. PRICE and CLARK are instructed to SELL by AUCTION, at GARRAWAYS, on TUESDAY, JUNE 3, at TWELVE precisely, several valuable PLOTS of BUILDING LAND, with 600 CHIMNEY-POTS, adjoining to Watford, in the charming village of Bushey, near the Windmill Inn, and a short distance from the railway station. This property is situate in a beautiful country surrounded by numerous gentlemen's residences, and having on the high road, leading to the Uxbridge and Barnet road, it has the advantage of a double frontage, rendering it particularly eligible for building purposes.—May be viewed till the sale, and descriptive particulars, with plans, obtained at the principal Inns in the vicinity and in London; of Geo. Plews, Esq. Solicitor, 1, Furnival's-inn, at Garraway's; and at Messrs. Price and Clark's Offices, 18, Chancery-lane.

STOCK-IN-TRADE of a MODELLER and MOULDER.—Sale for Wednesday next, instead of last Wednesday, which was postponed by reason of the severe weather.

MR. BRETT will SELL by AUCTION, on WEDNESDAY, the 14th of MAY 1856, at TWELVE o'clock, on the PREMISES, No. 4, Belvidere-place, Boroughroad, by order of Mr. Eaton, the CHIMNEY-POTS, models, forms, chimney pieces, moulds, tops, slabs, tablets, slates, and a vast quantity of castings; catalogues of which are now ready, and may be had at the place of Sale; and of Mr. Brett, Building Material and General Auctioneer, 23, Southwark-bridge-road.

Second Portion of the Valuable Stock of Mr. Peake, Builder, Bermondsey Brickfield, Jamaica-road, near Bow, Middlesex.

MR. G. HALL is favoured with instructions from J. Wilson, Esq. to SELL by AUCTION, without reserve, on WEDNESDAY, MAY 14, at ONE precisely, about new BRICKS, assorted in lots to suit the convenience of purchasers, and a quantity of improved of the usual description.—May be viewed three days prior to sale; catalogues had at the place of Sale; at the Rose and Crown and Queen Victoria Taverns, Bromley; and of the Auctioneer, 3, Cranbrook-street, Old Ford road.—Credit will be delivered into barges or on railway trucks, at the purchaser's option.

EXTENSIVE SALE OF BUILDING MATERIALS, OLD BRENTFORD.

MR. F. HALL has been favoured with instructions to SELL by AUCTION, by order of the Contractor, on THURSDAY, MAY 15, at TWELVE, on the PREMISES, Cromwell-lane, Old Brompton, the whole of the MATERIALS of several HOUSES and OLD BUILDINGS, situate in Cromwell lane, Old Brompton, comprising sound brickwork, in bricks, fancy and cantle bricks, sashes and frames, internal fittings, floors, roofs, pan and plain tiles, slates, fixtures, doors, gates, &c. &c. the whole to be taken down and cleared by the purchasers. May be viewed and catalogues had on the Premises, the day before the sale; and of Mr. F. Hall, Building Material and General Auctioneer, Chester-street, Kennington.

FREEHOLD BUILDING GROUND,

WOODFORD, ESSEX, close to the Railway Station.—TO BE LET, for a long term, an eligible CORNER PLOT, suitable in all respects for a Public-house. Also other Plots, for Shops or Private Houses.—Apply to Mr. RIVETT, Railway-bridge, Stratford.

FREEHOLD LAND TO BE LET, on

Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHILPSON, Architects, 4, Princes-inn, St. Clement's, Strand.

FREEHOLD BUILDING LAND, HOLLOWAY.—TO BE SOLD, or LET, about EIGHTEEN ACRES, in large or small Plots.—Apply to Mr. PEACHEY, 17, Sans-walk, Clerkenwell.

FREEHOLD BUILDING GROUND.—TO

BE LET or SOLD, on advantageous terms, TWO PLOTS of GROUND, situate in the most eligible part of St. John's-wood.—For particulars apply by letter, post-paid, to W. LEWIS, 9, Craven terrace, Craven-hill, Paddington.

FREEHOLD LAND for SALE.—TO BE

SOLD, about Fifteen Acres of LAND, situate within three miles of the metropolis, suitable for building. Excellent brick earth and building materials on the premises.—Apply to Mr. CHARLES LAWS, Architect 12, Dunstable-street, Bedford-row

SUPERIOR BUILDING LAND to LET,

near Cricklewood, St. John's wood, and Kilburn-gate and railway station, 120 feet above the Thames, commanding views of Hampstead, suited for good class villas of 60l. to 120l. yearly value. Leaseholds for 99 years. Rents from 3s. 6d. to 6s. per foot frontage. Address, Mr. BALL, 44, Regent-street, Piccadilly.

VALUABLE BUILDING LAND, on a fine

healthy eminence, commanding beautiful scenery, surrounded by open heaths and rich plantations, and within a few minutes' walk of a convenient railway station, less than twenty miles south-west of London. A long term (about eighty years) will be granted in one or more lots, the whole contemplating fifteen acres. JOHN DAWSON, Land Agent and Auctioneer, Marlborough-chambers, 4, Pall-mall.

TO BUILDERS, &c.—An undeniable SITE

for VILLAS, at CAVERSHAM, Reading, to be DISPOSED OF, on lease or otherwise, with accommodation, if required. Villa residences are much in request, and a capital return may be assured.—Apply to Mr. KNIGHTON, Caversham, Reading.

TO BE LET, WHARF PREMISES in

Regent's-canal, in one of the greatest thoroughfares round London; with counting-house, parlour, and shop fitted for the corn trade, with granary-sheds, lofts, a horse-walk, steam-engine, boiler, and shaft erected, and lastly for four cranes.

To Builders.—100 Loads of Petersburgh Laths for sale, cash prices low.

Apply to Mr. JOHN NEWTON, Norway Wharf, Hertford-road, Kingsland-bridge.

TO BUILDERS.

LEE, near BLACKHEATH.—FRONTAGES

TO BE LET, for detached or semi-detached villas, on the Belmont Estate. This estate contains the finest sites for building purposes anywhere round London, and good villas are in great demand, on account of the situation being lofty, dry, well drained, and excellently supplied with water. Assistance will be afforded to responsible parties.—For particulars, apply to Messrs. J. and C. W. TODD, Milner-street, Brompton, London, or Belmont, Lee, Kent, or Messrs. NEALON and INNES, Whitehall; and of Messrs. KIRKMAN and ENGLEHEART, King William-street, City.

BUILDING LAND TO BE LET, for the

erection of small houses, near the Licensed Victuallers' Asylum, Old Kent-road. This would be a safe investment to respectable Builders, who would be assisted with advances, if required.—Apply to Mr. ARTHUR TAYLOR, 38a, Basinghall-street.

BUILDING LAND TO BE LET within

six miles of the City.—7s per cent. advances. Also 10,000l. to be lent as a mortgage, in separate sums, on good security.—Apply to Mr. PATMAN, 31, Great James-street, Bedford-row.

BUILDING GROUND TO BE LET.—

Several PLOTS of GROUND TO BE LET, in the best part of Kentish town, Holloway, and Fulham. Money advanced if required.—Apply to Mr. TAYLOR, Surveyor, 21, Lincoln's-inn-fields.

HOLLOWAY.—Valuable BUILDING

GROUND TO LET, with liberal cash advances, to respectable builders, admirably situated for good Villa Residences, which are much required in this favourite and highly respectable locality. The situation is most healthy, possessing beautiful and commanding views, and the access to all parts of London easy. Property in this neighbourhood lets and sells rapidly.—For further particulars, apply to Mr. GEO. CLARKSON, Surveyor and Land Agent, 48, Penton-street, Pentonville.

TO BUILDERS.—FREEHOLD BUILDING LAND TO BE LET OR LEASE, for a Term of 999 years, at Horsford, Harrow, Stanmore, Hitchin, Wimbledon, Chertsey, Ash, near Aldershott Camp, and Wharf-road, City-road. Cash advanced, if required.—Apply to Messrs. BLAKE and SNOW, Solicitors, 23, College hill, Cannon street, London.

BUILDING LAND, very eligible, roads and

plots made and levelled, and a piece of valuable old brick earth, Turn, Dunstable, Beds to be let, Freehold. Moderate ground-rents. Situation, Higher-road, Angel, Edmonton. Other Freehold Land, front of Tottenham-green, opposite Trinity Church. Also Land at Stoke Newington, 200 feet frontage to high road, near Stoke Newington Station, Eastern Counties Railway, and near the junction with the new Caterham line. Moderate sized houses in great demand.—Applications to Mr. SCOTT, Clayhill, Enfield, Middlesex.

WOODCOTE ESTATE, CARSHALTON, SURREY.—To BUILDERS and OTHERS. To be LET for a term of 99 years, adjoining the Carshalton Station, on the London and Epsom Railway, several plots of BUILDING LAND, eligibly and delightfully situated close to Deptford-green village of Carshalton, commanding extensive and picturesque and extensive and varied scenery, and is peculiarly applicable for the erection of detached and semi-detached villas. Leases granted direct from the freeholder, and money advanced, if required. The Land is situated thirty minutes' journey from London-bridge. For terms and to see plans, apply at the offices of the Woodcote Estate, Messrs. WELHELM and ASHDOWN, 42, Charing cross.

BUILDING LAND at ACTON, near the

Railway Station, in a fine open and healthy situation, and plenty of fine water.—Apply to W. F. L. W. Esq. 67, Wimpole-street, Cavendish-square.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Sons) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," York street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, May 10, 1856.

SMYTH, M.A. To be commenced on MONDAY next, MAY 19th, at EIGHT o'clock. Tickets may be obtained at the Museum, by Workmen *Monthly*, from TEN to FIVE o'clock on the day of the first Lecture, upon payment of a registration fee of Sixpence for the whole course.
TRENHAM REEKS, Registrar.

CONTRACTS.

TO BUILDERS.—Parties desirous to CONTRACT for carrying into effect the ALTERATIONS proposed to be made at the COMMON GAOL of the County of Surrey, at Horsemonger-lane, for the purpose of adapting the same to the separate system according to the plan, specification, bill of quantities and conditions, which may be inspected at my Office hereinafter mentioned, on and after MONDAY, the 2nd of next JUNE, are requested to transmit Tenders for the same, addressed to me at my Office hereinafter mentioned, sealed and marked, "Tender for the County Gaol," before FOUR o'clock, P.M. on MONDAY, the 23rd of the said month of JUNE; and to attend, personally, before a committee of Magistrates, for the said County, by whom the said Tender will be opened at the Sessions House, Newington, on TUESDAY, the 24th of the said month of JUNE, at HALF-PAST ELEVEN o'clock. The Committee will not be bound to accept the lowest or any Tender, and security will be required for the performance of the Contract by the party whose Tender may be accepted.
WORONZOW GREIG, Clerk of the Peace.
Record Office, North-street, Lambeth, May 15, 1856.

MIDDLE LEVEL DRAINAGE.—To CONTRACTORS for PUBLIC WORKS.—Notice is hereby given, that the Middle Level Drainage Commissioners are desirous of receiving TENDERS for the WIDENING and DEEPENING of the NEW CUT through MARSHLAND, extending from the 16-feet River to the River Ouse, being about 3½ miles in length.—Plans, Sections, and a Specification of the Work may be seen at the Office of Mr. R. LUNN, the Superintendent of the Middle Level Works, March, Cambs, on and after MONDAY, the 26th day of MAY instant, and any further information may be obtained at the Offices of Messrs. WALKER, BURGES, and COOPER, 23, Great George-street, Westminster. The Tenders must be delivered at my Office, at Parliament-street, Westminster, by 12 o'clock on the forenoon of THURSDAY, the 5th day of JUNE next. The Commissioners do not pledge themselves to accept the lowest or any of the Tenders.
GEO. CLARK,
Clerk of the Middle Level Drainage Commissioners.
Dated this 14th day of May, 1856.

TO GASHOLDER-MAKERS and OTHERS.—The Directors of the Fareham Gas Company are prepared to receive TENDERS for the SUPPLY and ERECTION of a GASHOLDER, and the execution of other work, the specification (which may be had at the Office of Mr. THOMAS G. BARLOW, Civil Engineer, 3, Parliament-street, Westminster; or at Mr. J. MASON'S, Dowding-street, Fareham, Surrey). The Tenders are to be delivered in at Fareham on the 26th MAY instant, and the Directors do not bind themselves to accept the lowest or any Tender.
Fareham, 7th May, 1856.

CONTRACTS.

BUILDERS willing to CONTRACT for ERECTING and COMPLETELY FINISHING a PRIVATE DWELLING-HOUSE, in the parish of Ightham, may see the plans and specification on WEDNESDAY next, MAY 21st, at the Office of Mr. GEORGE GATES, 9, Ironmonger-lane, Lee, Kent. Quantities will not be supplied.

TO MANUFACTURERS OF GAS APPARATUS, IRON-FOUNDERS, &c.

THE DIRECTORS of the SWINTON and MEXBROUGH GAS-LIGHT COMPANY are prepared to receive TENDERS from persons willing to SUPPLY and FIX, COMPLETE the RETORTS, CONDENSER, PURIFIERS, GASHOLDER, GOVERNORS, MAINS, SERVICES, &c. required, according to the drawings and specifications prepared by Mr. T. F. CASHIN, C.E. and Architect, 16, Bank-street, Sheffield. On and after the 19th inst. the drawings may be inspected at Mr. CASHIN'S Office; and a copy of the specifications obtained, on payment of one guinea. Sealed Tenders to be delivered at my Office, on or before the 24th inst. The directors do not pledge themselves to accept the lowest Tender.
JNO. MELLOR STORY, Solicitor.
Swinton, Rotherham, May 8, 1856.

ROYAL ENGINEER CONTRACT.—WAR DEPARTMENT.—The War Department being about to enter into CONTRACTS for the following Works at Woolwich, Purfleet, and Shoeburyness, from the date of the acceptance of the Tenders, to the 31st MARCH, 1859, viz.:—
CARPENTERS.
BRICKLAYERS.
PLASTERERS.
PLUMBERS.
PAINTERS, GLAZIERS, and PAPER-HANGERS.
PAVIORS.
SLATERS.
SMITHS and IRONMONGERS.
MASONS.
UPHOLSTERERS.
GAS FITTERS.
Such persons as may wish to tender for the same may obtain schedules by applying to the Clerk of the Works, at the Royal Engineer Office, Grand Depôt, Woolwich, on or before the 23rd MAY, 1856, after which date no schedules will be issued. It must be understood that all such each party tendering may specify the per-centage on each trade separately, yet there will be only one Contract for each Station, embracing all the several trades.

TO CONTRACTORS AND BUILDERS.

NOTICE is hereby given that TENDERS will be received at the Office of the War Department, Pall-mall, London, on or before TWELVE o'clock, on MONDAY, the 26th MAY, 1856, from such persons as may be willing to enter into CONTRACTS for the construction of NEW PACKING-PLACE, BREAKWATER, and for Repairing the Concrete Slope, &c. of the Circular Redoubt, at Eastbourne, Sussex. Plans, specifications, and conditions may be seen, and every information obtained, on application at the Royal Engineer Office, at Eastbourne, between the hours of TEN and FOUR, daily, from the 12th to the 19th of MAY, 1856, inclusive (Sunday excepted). Tenders to be sealed up, and endorsed on the outside "Tender for Work, at the Redoubt, Eastbourne."
Royal Engineer Office, Eastbourne, May 5th, 1856.

NOTICE to BUILDERS and CONTRACTORS.—CONTRACT for REPAIRING certain portions of the RIVER FACE of QUEENBOROUGH WALL, and the TOP of the RIVER EMBANKMENT, from the Right Demi-bastion to the Government Boundary, at Sheerness.—The Commissioners of Royal Engineer give Notice, that sealed TENDERS will be received at the Office of the Director General of Contracts, Pall Mall, London, on or before THURSDAY, the 22nd instant, from such persons as may be desirous of CONTRACTING with the War Department, for REPAIRING certain portions of the RIVER FACE of QUEENBOROUGH WALL, and the TOP of the RIVER EMBANKMENT, from the Right Demi-bastion to the Government Boundary, at Sheerness. The plans may be seen, and printed specification and forms of Tender obtained, by persons fully competent to undertake the work (none others need apply), at this Office, between the hours of TEN and FOUR o'clock, from TUESDAY, 6th MAY, 1856, to TUESDAY, the 13th MAY, 1856 (Sundays excepted). The party whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately to be bound, under a penalty of £600, for the due performance of the contract. Tenders for the above Works to be addressed to "The Director General of Contracts, Pall-mall, London," and endorsed, "Tender for Repairing Queenborough Wall, Sheerness." No Tender can be admitted after the said 22nd day of MAY, 1856.
N.B.—The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, Sheerness, May 6, 1856.

NOTICE to BUILDERS and CONTRACTORS.—ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover District hereby gives Notice, that sealed TENDERS will be received at the Office of the Director General of Contracts, Pall Mall, London, on or before TUESDAY, the 3rd of JUNE, 1856, from persons desirous of contracting for RENEWING GRANITE PAVING, FIXING IRON FITTINGS, and PLASTERING, &c. to STABLES, at CANTERBURY BARRACKS. Drawings and specifications of the Works to be executed may be seen by persons fully competent to undertake the work (none others need apply), and forms of Tender obtained at the Royal Engineer Office, Canterbury Barracks, between the hours of TEN and FOUR o'clock, from MONDAY, the 19th of MAY, to MONDAY, the 2nd of JUNE, 1856, Sundays excepted. The party whose Tender may be accepted for the work will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of £60, for the due performance of the contract. Tenders for the above work to be addressed to the Director General of Contracts, Pall Mall, London, and endorsed "Tender for Paving Stables, &c. at Canterbury Barracks."
N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, Dover, 6th May, 1856.

CONTRACTS.

NOTICE to CONTRACTORS.—The Commanding Royal Engineer, Portsmouth, hereby gives Notice, that SEALED TENDERS will be received at the Office of the Director-General of Contracts, War Department, Pall-mall, London, on or before the 22nd inst. from persons desirous of entering into a CONTRACT for CONSTRUCTING a CAST-IRON BRIDGE of Communication from the Curtain to the Right Ravelin, and for RENEWING FIVE BRIDGES over the Ditch, Portsea Fortifications, Portsmouth. The Plans and Specification may be seen, and all necessary information obtained at this Office between the hours of TEN and FOUR each day Sundays excepted, until the 21st inst. The person whose Tender may be accepted will be required to provide two eligible securities, to be bound with him, jointly and separately, in a bond of £200 for the due performance of the contract by the 1st October, 1856. The War Department reserve the right of rejecting the whole or any of the Tenders. No notice will be taken of any Tender unless upon the printed form, which form may be obtained on application at this Office.
Royal Engineer Office, Portsmouth, 8th May, 1856.

TO CONTRACTORS and BUILDERS.—Notice is hereby given, that TENDERS will be received at the Office of the War Department, Pall-mall, London, on or before TWELVE o'clock, on the WEDNESDAY, MAY 28, 1856, from such persons as may be willing to enter into a CONTRACT for LAYING DOWN IRON PIPES, for supplying the Cavalry Barracks at Brighton with water. Plans, specifications, and conditions, may be seen, and every information obtained, on application at the Royal Engineer Office, at Brighton, between the hours of TEN and FOUR, daily, from the 14th to the 21st of MAY, 1856, inclusive (Sundays excepted).—Tenders to be sealed up and endorsed on the outside, "Tender for laying down Water-pipes at the Cavalry Barracks, Brighton."

TO SCAVENGERS AND OTHERS.

THE COMMISSIONERS of SEWERS of the CITY of LONDON hereby give Notice, that they will meet in the Guildhall of the said City, on TUESDAY, the 20th day of MAY next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for CLEANSING the STREETS and REMOVING DUST, &c. from the Streets of this City, for the term of one year from Midsummer-day next, agreeably to the provisions of a specification, a copy of which may be had upon application at this Office. The Commissioners will also at the same time receive PROPOSALS for WATERING certain of the STREETS of the said City twice a day, agreeably to a specification to be seen at this Office. The City to be divided, for the purposes of these contracts, into six divisions. Each contractor will be required to enter into bond, with two approved sureties, for the due performance of his contract. The Commissioners do not pledge themselves to accept the lowest Tender, nor any, unless deemed satisfactory. No Tender will be received after TWELVE o'clock on the day of treaty, nor shall any Tender be read which does not contain an inclosure of a 20*l.* Bank of England note, as an evidence of the sincerity made bona fide; which sum will be immediately returned to each person whose Tender is not accepted; and will be retained in the other cases until the contract and bond are duly executed.
JOSEPH DAW, Principal Clerk.
Sewers Office, Guildhall, April 26, 1856.

HARDWELL'S HEALTHY HOMES.—Such builders as may be willing to CONTRACT for the ERECTION of ONE of these DWELLINGS, in the St. James's District, may see the drawn and specification at 4, Great Queen-street, Westminster, any day, between the hours of TEN and TWO. The proprietor does not pledge himself to accept the lowest Tender.

ROADS and SEWERS.—To BUILDERS and OTHERS desirous of TENDERING for the CONSTRUCTION of a PIECE of SEWER and ROAD, at Upper Holloway, for A. JONES, Esq. 13, Paragon, Old Kent-road, may see the plans and specification for the same at the residence of Mr. THOMAS, Architect and Surveyor, No. 16, Denmark-street, Camberwell, on TUESDAY and WEDNESDAY, the 21st and 22nd inst.

EAST LANCASHIRE RAILWAY.—to BUILDERS and CONTRACTORS.—The Directors are prepared to receive TENDERS for the ERECTION of the following WORKS:—
1st. One Warehouse and other Works at Radcliffe.
2nd Passenger Station..... at New Church.
3rd Waiting Rooms..... at Musselcads.
Plans and Specifications may be seen at the Engineer's Office, Bury Station. Sealed Tenders endorsed "Tenders for Stations, &c." for each of the above-named Works, will be received by the undersigned not later than 27th inst.
MYLES FENTON, Secretary.
Bury, Lancashire, May 8th, 1856.

NEW PUBLIC BUILDINGS and MARKETS, ASHBY-DE-LA-ZOUCH.—To BUILDERS.—The Directors of the Ashby-de-la-Zouch Market Company, "Limited," will meet at TWELVE o'clock on MONDAY, the 2nd day of JUNE next, at the ROYAL GEORGE HOTEL, Ashby, for the purpose of receiving TENDERS for the EXECUTION of the works comprised in the ERECTION of a BUILDING for public purposes, for a Corn Market, Bank, Inn, and other works. Tenders with Particulars of Prices for the several works may be sent in, and Specifications at the offices of MR. HENRY J. STEVENS, the Architect, Post Office Chambers, Derby; or at the Committee-room of the Company, the Queen's Head Hotel, Ashby-de-la-Zouch, on and after MONDAY, the 19th inst. Plans of small Cottages proposed to be erected, and Further information may be obtained at the Architect's Offices as above. The Directors do not bind themselves to accept the lowest Tender, and will require the usual securities for the due performance of the Contract. By order of the Directors,
THOS. DAVENPORT, Secretary.
Ashby-de-la-Zouch.

[*For remainder of Contracts see next page.*

CONTRACTS.

TO BUILDERS, PAINTERS, and OTHERS.—HOUSE and PREMISES to be REPAIRED, No. 7, Aberdeen-place, Maida-hill, St. John's-wood. Specification to be seen at the Premises from TEN to FOUR for one week from MONDAY next, 19th MAY. Tenders to be sent to the Architect's residence on or before SATURDAY, the 24th instant.—G. GORDON SCANAM, Architect, 31, Alma-building, Notting-hill, Hammersmith-gate. The lowest Tender not necessarily accepted.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the whole of the WORKS in the ERECTION of SCHOOLS for the CHRIST CHURCH DISTRICT, Tunbridge Wells, may see the plans and specification at the Clerk of the Works' Office, Mount Ephraim, Tunbridge Wells, on and after MONDAY, the 12th inst., and obtain the necessary information as to the Contract. Sealed Tenders to be delivered at the Office of Mr. WILLIAM ROGERS, Architect, 13a, Cannon-row, Westminster, on or before FRIDAY, the 23rd inst., endorsed "Tender for Schools."—The Committee do not bind themselves to accept the lowest or any Tender.
May 14, 1856.

TO BUILDERS.

BUILDERS willing to TENDER for the ERECTION of a CHAPEL and HOUSE at Westonhill, near the Orgaal Inn, on the Portsmouth-road, Surrey, are requested to apply at the Office of Mr. WILLIAM ROGERS, Architect, 13a, Cannon-row, Westminster. TENDERS to be delivered to Mr. ROGERS, on FRIDAY, the 30th inst. at TWELVE o'clock. The Proprietors do not pledge themselves to accept the lowest or any Tender.
May 14, 1856.

TO BUILDERS.

BUILDERS willing to TENDER for thoroughly REPAIRING EIGHT HOUSES in Grafton-buildings, Duke-street, for the "Marylebone Association for Improving the Dwellings of the Working Classes," may see the specification and particulars at the Office of Messrs. W. G. and E. HABERSHON, the Honorary Architects, 38, Bloomsbury-square.

TO BUILDERS AND OTHERS.

PERSONS desirous of CONTRACTING for the ERECTION of a Farm House and Homestead on Pedwardine Farm; a Homestead on Buckton Farm; several additions to Homesteads on Wellington and Wolford Farms; and a Labourer's double Cottage on Coxall Farm; all on the Bramfield Estate in Herefordshire, may see the plans and specifications at the Orford Arms Inn, Brampton Bryan; or at the Office of Messrs. DENTON and DRAKE, 32, Parliament-street, Westminster, on and after the 19th of MAY. Tenders must be forwarded to Messrs. DENTON and DRAKE on or before the 9th of JUNE. (Quantities will not be supplied.)
15th May, 1856.

TO BUILDERS, IRONFOUNDERS, &c.

THE BURIAL BOARD for the Parish of Faversham, in the County of Surrey, are prepared to receive TENDERS for the ERECTION of about 300 feet of DWARF WALL, PIERS, and IRON RAILING at the New Burial Ground of the said Parish.—Plans and Particulars may be obtained at the Vestry-room, on and after WEDNESDAY, the 21st inst. And sealed Tenders addressed, "Tender for Iron Work," to be delivered at the VESTRY-ROOM aforesaid, on or before SATURDAY, the 31st inst. The Burial Board do not bind themselves to accept the lowest or any Tender by order.
C. H. MILLETT, Clerk to the Board.

WELLS and FAKENHAM RAILWAY.—CONTRACTS for STATION BUILDINGS.—The Directors of the Wells and Fakenham Railway Company are prepared to let CONTRACTS for the STATION BUILDINGS at Wells and Walsingham. Plans, specifications, bills of quantities, &c., may be had at the Offices of the Company, GEORGE BERKLEY, Esq. 24, Great George-street, Westminster, on and after MONDAY, the 19th of MAY, next.—By order,
JAMES HUTT, Secretary.
69, Lombard-street, London, May 9, 1856.

BOROUGH of STOCKPORT.—To CONTRACTORS and BRIDGE-BUILDERS.—The Council of the Borough of Stockport require PROPOSALS and TENDERS for the ERECTION of a STONE, or STONE and BRICK, BRIDGE, of three arches, over the river Mersey, between Heaton-lane and Cheshire-lane, the Parish of Stockport, together with the approaches thereto. The plans and specifications may be inspected at the Offices of Messrs. CAWLEY and RALFORD, Civil Engineers, 30, Dean's-yard, Westminster, on and after MONDAY, the 5th day of MAY next; and sealed Tenders must be delivered at the Court-house, Stockport, addressed to the Chairman of the Municipal Buildings Committee, on or before MONDAY, the 19th MAY next.
JOHN VAUGHAN, Town-clerk.
Court-house, Stockport, Ap. 21, 1856.

WARWICK LOCAL BOARD of HEALTH.—CONTRACTS for DRAINAGE and WATER WORKS.—The Board hereby give Notice, that they are prepared to receive TENDERS from parties who may be willing to CONTRACT for DRAINING certain STONEWARE and CAST-IRON DRAIN PIPES and CAST-IRON WATER-PIPES, Building in Engine and Boiler House, Constructing Reservoirs, Filter Beds, and Pump Well; also, for supplying a Wrought Iron Tank, and the Construction of a Service Tower and other Works. The Contract Drawings and the Specifications may be inspected at the Office of the undersigned, at Warwick, on and after the 8th inst.; where also statements of quantities and forms of Tender may be obtained. Further particulars may be given at the Offices of Mr. LEWIN, Engineer to the Local Board, 4, Trafalgar-square, London. Tenders must be sent in on or before the 2nd day of JUNE next. No Tender will be entertained unless it be made upon the printed form, Master of the Board.
JAMES TIBBITS, Clerk to the Local Board.
Warwick, May 1, 1856.

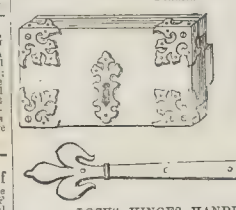
TO BUILDERS

NEW CHURCH at EASTWOOD, NOTTS. Persons willing to CONTRACT for the WORKS to be done in BUILDING a NEW CHURCH, at Eastwood, may see the plans and specifications, on application to the Architect, Mr. K. BARKER, on and after the 19th inst. Sealed Tenders to be sent to the Rev. H. W. PLUMPTRE, Eastwood Rectory, on or before the 29th instant. The lowest Tender will not necessarily be accepted.

TO CLOCK-MAKERS. — EIGHT-DAY CLOCK WANTED for the CASTLE CARY MARKET-HOUSE, Somersetshire. The clock will have to be placed in a roof, on timbers capable of bearing a weight not exceeding 10 cwt. The fall available for the weights is about 25 feet; but 25 feet would be rather more convenient. The most simple gearing motion to the hands, &c., must be carried along the roof horizontally about 25 feet; afterwards vertically about 10 feet, into an open lantern-head, 8 feet square, made of wood with three sides pierced for hanging a bell, with six spokes, 3 feet 6 inches in diameter. The works to include a train for striking the hours and quarters on a bell already fixed in the lantern, weighing 9½ lbs. TENDERS to be sent to Mr. RUSS, Solicitor, Castle Cary, on or before SATURDAY, the 24th inst.
Dated Castle Cary, May 1, 1856.

TO BUILDERS AND CONTRACTORS.

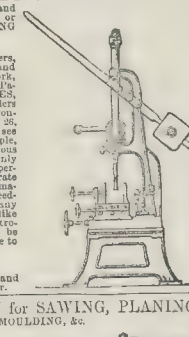
LINCOLNSHIRE.—NEW TUNNEL for DRAINAGE of WAINFLEET MARSHES.—All persons willing to CONTRACT for BUILDING a NEW TUNNEL, 90 feet long and 4 feet 6 inches wide, of BRICK and STONE WORK, with Sluice Doors, &c., through the Sea Bank, in Wainfleet Marsh, in the Parish of Wainfleet All Saints, and Hundred of Skirbeck, in the Parts of Lindsey, in the County of Lincoln, are desired to deliver in their proposals, in writing, sealed up, directed "Tenders for Wainfleet Marsh Sluice," to me, at the Angel Inn, on Wednesday, the 21st day of May next, at Two o'clock in the afternoon precisely, at which time the Tenders will be opened in the presence of such Contractors as may attend.
Wainfleet, May 1, 1856. DAVID MARTIN, Surveyor.



CONTRACTS.

WELLS, Somerset.—To BUILDERS and CONTRACTORS.—Persons desirous of CONTRACTING for the ERECTION of new PAPER-MILLS at Wookey Hole, near Wells, may inspect the plans and specification at the Office of the undersigned, on and after THURSDAY, 8th inst. Sealed Tenders to be delivered in or before 31st inst. The lowest Tender will not necessarily be accepted.
EDWIN HIPPISLEY, Architect and Surveyor.
Dated May 8th, 1856. Wells, Somerset.

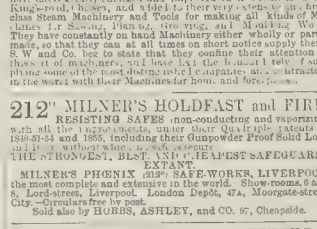
THE CROYDON LOCAL BOARD of HEALTH are desirous of receiving TENDERS for PROVIDING and LAYING 955 feet of STONEWARE DRAIN-PIPES, of 12 inches in diameter, at the Canterbury road, Thornton-heath, Croydon, at depths varying from 3 to 13 feet, in accordance with the specification and drawings, to be seen at the Office of Mr. THOMAS COX, Surveyor, at the Town Hall, Croydon, on or after the 22nd instant.—Tenders to be sent in on or before FOUR o'clock, on TUESDAY, the 27th instant.
By order of the Board,
Croydon, May 14, 1856. HENRY RICHARDS, Clerk.



TO BUILDERS.—A Gentleman wishes to ERECT some COTTAGES or VILLAS on his own Land, advancing half the outlay, and granting leases at ground-rents, in small or large lots. Apply to Mr. KNIGHT, Surveyor, 14, Argyle-street, Regent-street, who also has a Brickfield to Let on easy terms, that is capable of producing millions of first-rate Brick.

HART AND SON,
IRONMONGERS AND MANUFACTURERS,
53, 54, 55, & 57, WYCH-STREET, STRAND,
London.

LOCKS, HINGES, HANDLES, &c.
First-class Prize Medal, Paris Exhibition, 1855.
Illustrated Price-catalogues post-free on application.



NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

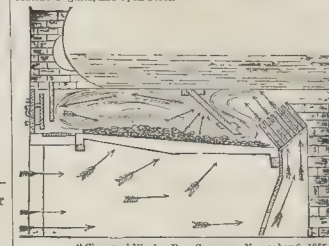
House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at Mr. Plenteet, POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self feeding, it does not require any skill or care in using like the older inventions hitherto used. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the Kingsroad, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to these sort of machinery, and have had the honour of having supplying some of the most distinguished engineers and contractors in the world with their Machines for hour, and force.

212° MILNER'S HOLDFAST and FIRE-RESISTING SAFES (non-conducting and vaporizing), with all the improvements, under their Quadruple Patents of 1849-51-54 and 1856, including their Gunpowder Proof Solid Lock and Bolt without wards, keys, or escutcheon.
THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.
MILNER'S PHŒNIX (212°) SAFE-WORKS, LIVERPOOL the most complete and extensive in the world. Show-rooms, 6 and 8, Lord-street, Liverpool. London Depôt, 47A, Moorgate-street, City.—Circulars free by post.
Sold also by HOBBS, ASHLEY, and CO. 97, Cheapside.



TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c. The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire, Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron Tube, Composition, Iron, and Brass Cocks, Copper Cocks, Brass and Lacquered Gas Tube for Pillar Brackets, Gasaliers, &c. Bell Brass for Engravers, Cushions, Gas Fire and Coke Stoves, Register Stoves, &c. &c.
RICHARD LEWELLEN'S Brass and Bell Foundry and Metal Warehouse, No. 9, 11, and 12, Charles-street, Long-acre, London.

WOOD CUTTING MACHINERY.
JOHN M'DOWALL and SONS,
WALKINSHAW FOUNDRY, JOHNSTONE, near Glasgow,
MANUFACTURERS of VERTICAL SAW-FRAMES
(driven by straps),
For cutting balks of timber, from 5 feet on the side down to the smallest deal frame.

Patent vertical saw-frames, of the following dimensions, with steam-power attached; circular cross-cut radial sawing machines; patent moveable ditto; patent horizontal cross-cut sawing machines, for heavy timber; planing machines, for working boards from a ¼ of an inch thick to 6-inch deck plank; revolving planers, for squaring and shaping heavy timbers, as used by ship-builders, &c.; patent curvilinear sawing machines, for circles, sweeps, and straight cutting, well adapted for ship-builders; power mortising and tenoning machines; moulding machines, single and double; veneer mills of all sizes, with all appendages; sale-board machines, for hat-boxes, &c.; patent silent feed motions for saw-frames; and every description of machinery for cutting and shaping timber, all constructed of iron, of the best materials, and first-class workmanship. Mr. M'Dowall has been in the engineering and millwright business for upwards of 36 years, but during the last 24 years he has directed his attention particularly to the manufacture of wood-cutting machinery, as evidenced by the numerous patents he has obtained for its improvement, and by the extensive orders his firm has been favoured with from the British and other European Governments and private establishments in almost all parts of the world; and from their large and commodious premises, and first-class plant made for every department of the work without regard to cost, the largest contracts can be executed with a regularity accuracy, and despatch, which cannot be exceeded by any other firm in Europe.—Applications as above for further particulars, will be promptly attended to.

CONTRACTORS.—MATTHEW T. SHAW has on SALE a large quantity of Contractors' Rails and Earth-tip Waggons, Wheels, and Axles, and every description of Railway Plant and Stores; Girders of wrought-iron for Bridges, and Buildings designed and manufactured. Castings of every description. Deliveries in a few days.—84, Cannon-street, City.—P.S. Wrought-Iron Rolled Pitches 1 to 6 feet.

LESS FUEL, MORE STEAM, NO SMOKE.
GARDNER'S PATENT SMOKE CONSUMER is SELF-ACTING, EASILY FIXED at a SMALL COST, IMPROVES the DRAUGHT, and SAVES FUEL. Applicable to all Furnaces, Boilers, Ovens, Locomotives, Marine Engines, and Open Fires.

"Chemical Works, Bow Common, November 9, 1855.
"DEAR SIR, In answer to your further inquiry concerning the saving of fuel in connexion with the use of your patented apparatus, by which inquiry I was hitherto from incomplete observation, unable to reply, I beg now to state that we are enabled without difficulty and without smoke, to command a full supply of steam, and to generate it much quicker than we could previously. We employ an ordinary furnace coal. I feel satisfied there is a considerable saving of fuel, the precise amount of which we cannot at present determine.
"I remain, dear Sir, yours truly,
"To E. V. GARDNER, Esq." "FRED'K. ALLEN.
Apply to the PATENTEE, 24, Norfolk-street, Middlesex Hospital; or to Messrs. BURRIDGE and HEALY, 118, Dorset-street, Fleet-street; or Z. D. BERRY, Albion Works, Victoria-road, Pimlico. Bakers' Ovens fitted for Iron-included.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 139, Shoreditch.

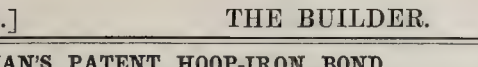
COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, conchhouse, and other gates and doors. They have also a new description of non weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced at pleasure. Also spring hinges and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast and Wrought Iron Boiler Plates, and STEWART'S PATENT CANTILEVER CAST-IRON WATER-PIPES.
Office, No. 7, Bise-lane, London.

TO IRONMONGERS, BUILDERS, &c.
PATENT WROUGHT-IRON WELDED TUBE for GAS, STEAM, WATER, and ENGINE WORK. Non-corrosive, for portable and improved furniture.—HULETT and CO. 95, Chiswell-street, Finsbury.



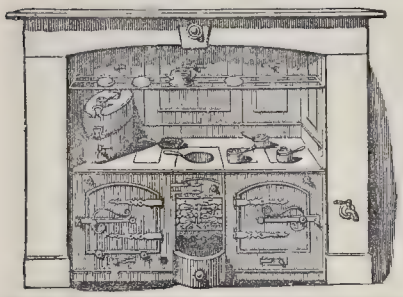
TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES beyond the current Price of Hoop-iron.

Gauge.	In. wide.	Per 1,000 ft.
No. 16	1¼	7s. 0d.
15	1½	7s. 6d.
15	1¾	8s. 0d.
15	2	8s. 6d.
15	2½	9s. 6d.



THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 12 inches, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming REVERSED CLAWS, which are so bent, that a direct end grain of the iron is presented longitudinally, and which, became when built into the brick work, embedded in the structure, by which means a COMPLETE and PERFECT DETAIL TIE throughout the whole building is obtained.

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.

London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, to which they have made important additions, the main features of the same being explained in the following description and Engraving.

A represents the Patent Halter-guide and Collar-rein, the ball of which is taken to the back of the manger-works with freedom and case up or down the guide-bar, and is noiseless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

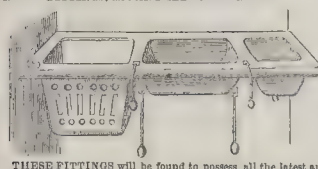
B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers, Sand-trap Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.



An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-Iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

The New Illustrated Catalogue for 1856 gratis on application. Estimates and Designs.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

THESE FITTINGS will be found to possess all the latest and most important improvements, and are of the best manufacture. All kinds of Stable-furniture in stock. Iron Hurdles, Gates, Fencing, Tomb-railings, &c. New illustrated Catalogues forwarded on receipt of two postage-stamps. JAMES BARTON, Ironfounder, &c. 350, Oxford-street, London.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled. GIRDERS (cast and wrought-iron). COLUMNS. Sash Weights. Hand-Pipes. Eave-gutters, various shapes. Level or ornamental Rain-Pipe Heads, of these and other designs, and all castings connected with buildings, in London or sent out at cheap prices.

CASTINGS WAREHOUSE, 65, UPPER THAMES-STREET.

GAS COOKING-STOVES, for large or small establishments.—DEANE, DRAY, and CO. 1, Arthur-street East, London-bridge.

Testimonial respecting the Crystal Palace Kitchen, as fitted by DEANE, DRAY, and CO.

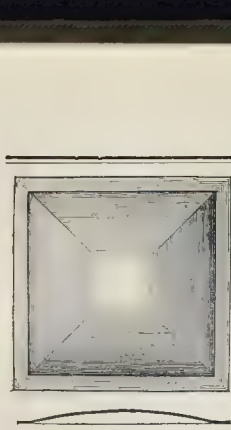
8, Ridgmount-place, Hampstead, March 9th, 1855.

Gentlemen,—I have great pleasure in bearing testimony to the capabilities of your extensive many Gas Cooking Apparatus, being the largest and most perfect yet in use. Suitable for hotels, mansions, club-houses, private houses, and the army; having cooked in one day 1,000 lbs. and many cwts. of ham, beef, veal, mutton, lamb, bouyne, &c.; roasting in one department a baron of beef weighing 150 lbs in nine hours, fifty-three minutes, presented by J. Hanister, esq. Threadneedle-street, to the directors, for the banquet given to the foreign ministers. They have been in full operation for ten months, and are now in as perfect order as when first finished. They have not cost one shilling for repairs.

I am, Gentlemen, yours respectfully,

EDWARD HORNE.

Messrs. Deane, Dray, and Co.



OLD STOVES and RANGES.—

E EDWARDS, SON and CO. have constantly on hand a quantity of OLD STOVES and KITCHEN RANGES, in very good condition, which are taken down by their establishments when they erect new work, and which are to be sold at exceedingly low prices.—42, Poland-street, Oxford-street.

JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

STEAM BOILERS of every description, Wrought-iron Girder Bridges, Roofing, Sheeting, Tanks, Gasholder Tanks, Cisterns, Columns, Pillars, Girders, Joists, Rolled Iron for Shipbuilding, Railway Chairs, Bridge Rails, Fencing, Gates, Palisades, Hurdles, Iron Bedsteads, Mangers, Troughs, Sheep Troughs, Cattle Troughs, Iron Doors, Shutters, Frames, Sashes, Casements, Fenders, Stoves, Ranges, Grates, Kitchen Utensils, Pots, Pans, Saucepans, Gridirons, Frying-pans, Coal-scuttles, Shovels, Tongs, Fire-irons, Fire-bars, Oven-doors, Ash-pans, Smoke-jacks, Weights, Weighing-machines, Scales, Beams, Anvils, Vices, Screws, Screw-jacks, Cranes, Pumps, Pump-work, Pipes, Syphons, Valves, Cocks, Taps, Ball-cocks, Lead-pipe, Lead-traps, Lead-soil-pipes, Lead-waste-pipes, Lead-flats, Lead-roofing, Lead-sheeting, Lead-gutters, Lead-work, Lead-weights, Lead-shot, Lead-bullets, Lead-balls, Lead-cisterns, Lead-tanks, Lead-coffins, Lead-coffin-plates, Lead-coffin-handles, Lead-coffin-screws, Lead-coffin-nails, Lead-coffin-ornaments, Lead-coffin-linings, Lead-coffin-trimmings, Lead-coffin-furniture, Lead-coffin-fittings, Lead-coffin-mountings, Lead-coffin-decorations

Plan and Section of Buckled Plate; Convex Side.

MALLET'S PATENT BUCKLED PLATES.

TUPPER AND CARR,

SOLE LICENSEES AND MANUFACTURERS.

THESE Plates are applicable to every purpose where strong, rigid, light, and durable load-sustaining surfaces are demanded; as for the Flooring of Bridges, Viaducts, Jetties, Fireproof Flooring for Buildings, Fireproof Partitions, Bulkheads, Doors, and Shutters; the Plating in between Iron Piling for Wharf or Dock Walls; the Covering of Iron or other Roofing, as for Building-Slips in Dockyards, for Railway Stations, &c. The construction of Iron, Military, Colonial, or other Huts, Stores, and Iron Buildings of all sorts; the Formation of Water-Tanks; the Covering of Reservoirs of Waterworks; and, generally, to every purpose to which Corrugated Iron has been applied, besides many others to which that is inapplicable, as, for example, the Construction of Balcony or Cantilevered Galleries, Projecting Footways, &c. the Plates deriving their support solely from themselves and the walls

BUCKLED PLATES may be united to each other, or to the frame of the structure they cover, by either lap or butt joints, and either by screw bolts, rivets, or wood screws (to timber), and the joints are made absolutely water-tight when required, by rivetting and chinking up, or by interposed strips of felt saturated in oil cement, or in tar and pitch, or by strips of vulcanised India-rubber, or by a thin layer of oil putty.

The Size of the Patent Buckled Plates is 3 feet by 3 feet.

For further particulars, prices, &c. apply to the Licensees,—

TUPPER AND CARR,

3, MANSION-HOUSE-PLACE, LONDON, AND 6, BERKLEY-STREET, BIRMINGHAM.

136, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK.

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

MARBLE Works by PATENT MACHINERY, Commercial-road, Pimlico, London.
THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Sale consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

MARBLE and STONE CHIMNEYS.—150 MARBLE CHIMNEYS of various designs and colours, most of them fixed, are now on view at the Cambridge Heath Marble Sawing-Mills. The proprietor has again enlarged his workshops, and erected so much improved machinery, so as not only to compete, but is able to manufacture more, and consequently cheaper than any house in the trade.

The Trade supplied.

MARBLE.—The Italian Marble Company, Importers of the produce of their own quarries, in the province of Mass-Carrara, Italy, beg to inform the general Marble Trade in the United Kingdom that they are prepared to undertake contracts for any quantity of Statuary, Veined, Sicilian, Bardilla, Dove, and other Marbles, in blocks of all dimensions, delivered on shipboard at Leghorn, or in dock, London. A constant stock always on view, and orders taken for Paving Slabs, Garden and Hall Statues, Vases, Tazzas, Mortars, Consoles, Chimney-pieces of all classes, Circular Table-tops, Monuments, &c. executed in Italy.—For further particulars, inquire at the Office, on the premises, Bridge Wharf, Millbank, Pimlico, adjoining the east side of Vauxhall-bridge.

WILLIAM W. BONNIN, Secretary.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-cross, London, continue to supply the trade with all descriptions of Marbles, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

Lloyd's Marble Wharf, Thames-bank, Pimlico, Adjoining Vauxhall-bridge.

ITALIAN STATUARY, veined, Sicilian, dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf at all hours.

STONE! STONE! STONE!—To the TRADE.—The cheapest place in London for Portland and Bath Stone, Yorkshire Landings, Steps, Curb, Paving, Self-face Slab, Granite Pitching and Curb, Guernsey broken Road Materials, and every other description of stone, at JOHN KNIGHT and SON'S, Devon Wharf, Mile-end. York tooled paving, 3s. 6d. per 100 feet; slab for hearths, 4d. per foot sup.; slab for chimney-pieces, 2½d. per foot sup.; 8 by 3 window-sills, 6d. per foot run; 13 by 3 coping, 8d. per foot run; box chimnies (any opening), 8s. 6d. each. Terms cash on delivery.

FREESTONE.—Architects and Others are reminded that they can obtain the CASTERTON Freestone in blocks of any portable size, on applying to PHAS. and OCT. N. SIMPSON, Stamford. Specimens may be seen, and information obtained at the Offices of Messrs. PINDER, SIMPSON, and SONS, 29, Savile-row, Burlington-gardens, London.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER.

Marble of all kinds and of best quality, in block and slab, Marble mortars, &c.

FOR MACADAMIZING ROADS.—The hardest and most durable STONE for ROAD-MAKING.—The Proprietor of an extensive Quarry just opened at Dancannon—a Rock containing BLUE ELVIN GRANITE, which makes little dirt or dust, and has been proved by hydraulic pressure to be 25 per cent. harder than Aberdeen Granite—is now open to contract to supply any quantity at the following low charges, delivered out of the vessel in the Thames:—Unbroken lumps, 8s. 6d. per ton; broken, 4s. per ton. Apply to Mr. JOHN NEWTON, Norway Wharf, Hertford-road, Kingsland-basin.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street, Manager—JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

STONE, GRANITE, MARBLE, and SLATE, from Bath; Bramley Fall, Caen, Darley Dale, Portland, Purbeck, Yorkshire, Aberdeen, and Cornwall Blocks; Paving, Landings, Slabs, &c. supplied direct by rail or vessel, also from their wharfs, at Millbank, City-road, and Deptford, by W. and F. FREEMAN, Millbank-street, Westminster.

ANCASTER STONE, so remarkable for its free working quality, combined with colour and durability. Price, and cost of transit to any part, may be obtained, upon application at Mr. W. THOMPSON'S Office, Elmer-street, Grantham.

TO CONTRACTORS FOR PUBLIC AND OTHER WORKS.
THE HAYTOR GRANITE QUARRIES.

TO BE LET, with immediate possession, the noted and valuable GRANITE QUARRIES of HAYTOR DOWN, in the parish of Ilsington, in the county of Devon; six miles from Chudleigh, six from Ashburton, eight from Newton-Abbot, where there is a railway-station, and twenty miles from Exeter. The Quarries are fully opened, and railroads communicate to each of them. They are known by the Old Quarry No. 1, the New Level, working under the sole of No. 1, the No. 2 Quarry, and the magnificent Quarry called Holwell Tor, which are all in a capital state for immediate working on an unlimited extent. Stones of all scantling, from the smallest Kirb to the largest columns or blocks, may be got with the greatest facility. Annexed to the Works are an excellent Builder's-house, workshops, and sheds, and, if required, several labourers' cottages. The stone is transported by means of a tram-road and canal to the port of Teignmouth.—For any further particulars, apply to the Duke of Somerset's Agent, Mr. BEARNE, at the Office, Teigngrace, Newton-Abbot, Devon; Mr. BEATER, Teignmouth; or Mr. SOUTHEY, Haytor Down.

RAWDON-HILL STONE.—Messrs. TRICKETT and PERKIN are prepared to execute orders to any extent for their much-admired Building Stone. Depôts, where large stocks are kept, No. 3, Stone-wharf, Great-Northern Railway Station, King's-cross; Victoria Stone-wharf, Millwall, Poplar. Blocks quarried to suit customers for columns, cornice, landings, steps, ledgers, headstones, cills, &c. Delivered to any part by vessel or railway trucks.

"This stone when better known, must come into extensive use; I should think it exceedingly suitable for the London market."
C. L. DARSEER, F.G.S.

Address, JOHN TRICKETT, Headingley, Leeds, Yorkshire; or, SAMUEL TRICKETT, Victoria-wharf, Isle of Dogs, London.
N.B. A large quantity of Foundation Landings for sale.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman, Carges shipped to order from Caen quarries. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf, as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE.

YORKSHIRE STONE.

GEO. VINT and BROTHERS, IDLE, near LEEDS,

Beg to inform Architects, Surveyors, Contractors, Builders, and Masons, that they can supply to any extent all kinds of YORK STONE, including Paving, Bramley Fall, Park Spring, Robin Hood, Harehill, &c. of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SOLES and WOOD invite the attention of Builders and Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

TO BE SOLD, at greatly reduced prices, 10,000 Feet of ORNAMENTAL BALUSTRADING of varied designs; also 1,000 square Balusters 2 feet high, and about 1,500 Trusses, being the remainder of the Annual Sale of the Patent Siliceous Stone Company.—Apply immediately to Mr. HENRY HODGE, Company's Offices, Whitehall-wharf, Cannon-row, Westminster.

PARIS EXHIBITION. — ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; tables and exquisitely decorated slabs for the tops of loo tables, chiffoniers, consoles, &c.; baths, baptistries, altar-tablets, pilasters, columns, vases, pedestals, and brackets; wash-hand tops, billiard tables, lintels to halls, vestibules, and dairies. Price lists can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single foot to the most extensive contracts, for home and abroad.

GREEN SLATE.—The Green Slate produced from the Tyn-y-Werrid Quarries, has been pronounced superior in colour, grain, and cleavage, to any hitherto used. Blue and Purple Slate of the best description.—Apply to Mr. OGILVIE, 1, Cushion-court, Old Broad-street, where samples may be seen; or to Mr. JENNINGS, Penygroes, near Carnarvon.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.

ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 9l. to 10 guineas. Slate Cisterns made to any size.—J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex.

TO CAPITALISTS.—Capitalists are invited to INSPECT one of the finest and most perfect SLATE FORMATIONS now existing in the Principality, combining an area upwards of one hundred acres in extent, of the most solid material, rarely to be equalled, but certainly not to be surpassed. The quarry can be reached by rail in nine hours from the metropolis, and is only distant seven miles from the South Wales Railway. In the process of manufacture, the edges of the Slate, solely through the operation of machinery, are cut by pressure, and consequently by this mode the Slate is exempt from flaw or fracture. Specimens of the material will be transmitted to any party who may require them by receiving their address. If after a survey of the quarry, there should be a disposition to treat with the proprietor for the working of the Mine upon an extensive scale, a satisfactory reference would be required.—Address to the Proprietor, Summerton Slate Quarry, Letterston, Haverfordwest. Specimens to be seen at the Office of "The Builder."

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

SLATE.—HONDURAS-WHARF, BANK-SIDE.—H. SHEFFIELD has the pleasure of informing the trade, builders, and others, that he has an excellent assortment of the best Bangor Slates, at the lowest prices. Shipping and all orders promptly attended to.—Offices also, 6, Rood lane, City.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations,
FROM 2s. 9d. PER SQUARE YARD.
Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.
Apply to JOHN PILKINGTON, Poloncean and Limmer Asphalte Office, Monument-chambers, 14, Fish-street-hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

TO BUILDERS and OTHERS. — 500 YARDS of clean-washed Thames BALLAST TO BE SOLD to clear the Phœnix Wharf, 70, Baukside, Southwark, at 2s. per yard.

AND WILTON ROAD, PIMLICO.

STEAM FRET-CUTTING WORKS.—To BUILDERS, CARPENTERS, CARVERS, CABINET and PIANOFORTE MAKERS, and others.—SANDY and CO. Established twelve years, 60, Tottenham-court-road. Every description of fret and other open work cut in a superior style, with economy and despatch. Shapings, bevel patterns for founders, devices for illuminations, &c. cut in any thickness.

TO BUILDERS, COACH-MAKERS, DECORATORS, HOUSE-PAINTERS, &c. &c.

CHAS. W. NOBLE (late A. and F. Strong), VARNISH MANUFACTURER, continues to supply every description of Varnishes and Colours, of the very best quality, and at the lowest prices. The Varnishes manufactured by Noble have stood the test of nearly a century, made of pure materials, insuring that deterioration in varnish—body, polish, and finish, for which his predecessors have been so long and so far famed.
** Methylated Spirit Varnishes, Follshes, &c.; also Noble's Enamel Paper Varnish, for decorators, &c. Coach-painters' and Lithographic Colours.
N.B.—Merchants and shippers will find an advantage in exporting Noble's Varnishes.
Manufactory—MITCHAM, Surrey.
Wholesale and Retail Warehouse—117, LONG ACRE, London.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings. A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

TO TIMBER MERCHANTS and OTHERS. The Proprietors of Lett's Wharf, Commercial-road, Lambeth, offer the most convenient Wharf for landing all sorts of English Timber, &c. Spacious Dry and Drawing Docks, 30 and 10-ton Cranes, Sawpits for converting Timber, &c. Freights paid on delivery.—Apply to G. NOKES and CO. as above.

LETT'S WHARF PATENT SAWING, PLANING, and VENEER-CUTTING MILLS, Commercial-road, Lambeth.—The proprietors beg to announce to the trade that they have completed their extensive arrangements, and will be happy to execute all orders intrusted to their care with despatch and punctuality.
N.B. All goods sawn at these mills fetched and delivered free of charge.

TIMBER SAWING-MILLS, Belvedere-road, Lambeth.—ROBINSON and BARTRAM respectfully inform their friends in the Timber and Building Trades, that they have now completed their New Mill for Sawing building and other Timber, and will be glad to receive their favours in this department of sawing. Full particulars will be forwarded on application, per post or otherwise. Timber up to 55 feet long can be cut at these mills.—N.B. A powerful Crane for landing timber on to carriages, at 1s. 3d. per load.

GREAT REDUCTION. — Yellow Deals, 3s. 6d.; Spruce, 3s.; Pine Plank, 3s. 9d.; 9x Yellow Battens, 12l. 10s. per 120 12 feet; Mahogany, 6d. per foot. Cartage free to any part of town.—T. FORMAN, 1, Walnut-tree-walk, Lambeth-walk.

IMPORTANT to BUILDERS and PAINTERS.—Genuine White Lead, 22l. per cwt.; Linseed Oil, 2s. 7d. per gallon; Boiled Oil, 2s. 11d. per gallon; Turpentine, 2s. 7d. per gallon;
Fine Pale Oak Varnish, 7s. 6d. per gallon.
For cash, at EDWARD PRICE'S Oil and Colour Warehouse, 45, Coleshill-street, Pimlico.—Every article for the trade at the lowest price.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 44, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

TO FRENCH POLISHERS, CABINET-MAKERS, BRASS-WORKERS, &c.—A considerable reduction has taken place in the prices of French polish, white and brown hard spirit varnishes, spirit lackers, and finishing spirit. The present price is 6s. to 8s. 6d. per gallon; white French polish, 10s. per gallon; white shellac, 1s. 8d. per lb.; gums, shellacs, and acid at the lowest prices. A net cash list forwarded on application to JAMES SLIPPER, 37, Leather-lane; and 14 and 15, Dorrington-street, Holborn, London.

FREEHOLD ESTATE at HACKNEY, near the Railway Station, where trains and other conveyances start for the City every quarter of an hour, TO BE LET, in plots averaging 130 feet deep, on building leases for ninety years, land-tax redeemed. The roads and sewers are wholly completed, and the property situate on a fine gravel soil, in a most eligible position for villas, family residences, and shops.—For terms and particulars apply to Mr. HERING, Architect, 23, Duke-street, Portland-place; or Messrs. GRAY and SON, Estate Agents, Church-street, Hackney.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 3, Danes-inn, St. Clement's, Strand.

FREEHOLD LAND for SALE.—TO BE SOLD, about Fifteen Acres of LAND, situate within three miles of the Metropolis, suitable for building. Excellent brick earth and building materials on the premises.—Apply to Mr. CHARLES LAWS, Architect, 12, Doughty-street, Bedford-row.

FREEHOLD BUILDING GROUND.—TO BE LET or SOLD, on advantageous terms, TWO PLOTS of GROUND, situate in the most preferable part of St. John's-wood.—For particulars apply by letter, post-paid, to W. LEWIS, 2, Craven-terrace, Craven-hill, Paddington.

FREEHOLD MANUFACTURING PREMISES, near the Eastern Counties Railway Terminus in Shoreditch.—TO BE SOLD or LET, the above ESTATE, comprising extensive Manufacturing Premises with dwelling-house, two cottages, shops about 180 feet long, large yards, stabling, &c. with capital Drainage. Also, TO BE LET, a part, or the lease of the whole, TO BE SOLD, of large Premises adjoining, consisting of two workshops about 60 feet long, four cottages, stabling, and other buildings, with a large yard, also thoroughly drained.—Apply to Mr. TURNBULL, 48, Worship-street, Finsbury.

FENCHURCH-STREET, and MINCING-LANE, East Corner.—TO BE LET, on a Building Lease, an ELIGIBLE SITE for BUSINESS PREMISES. Sealed Tenders, addressed "to the Clothworkers' Company," to be left at the Hall, in Mincing-lane, by TUESDAY, the 27th instant. Further particulars may be obtained by application at the Hall, or at Mr. LINGE'S office, 34, Gower-street, Bedford square, between the hours of TEN and FOUR.
R. B. TOWSE, Clerk.
Clothworkers'-hall, May 1856.

LAND for FACTORIES and DWELLING-HOUSES, most eligibly situate, lying between the River Wandle and Garratt lane, at Waudsworth, and near Two Railway Stations, TO BE LET, in one or more plots, for Building purposes. Lease 99 years. Money advanced if required.—Apply to Mr. GEORGE LOW, Architect, 1, Church court, Clement's-lane, City.

STRATFORD, ESSEX. — FREEHOLD LAND, within three miles of London, exonerated from land-tax and free of tithe, TO BE LET, on Lease, for a long term of years, in large or small plots, suitable for manufactories or building purposes.—Apply to Mr. W. H. DEAN, Auctioneer and Surveyor, Stratford; or to Mr. GEORGE POWNALL, Surveyor, 37, Bloomsbury-square, London.

HOLLOWAY. — Valuable BUILDING GROUND TO LET, with liberal cash advances, to respectable builders, admirably situated for good Villa Residences, which are much required in this favourite and highly respectable locality. The situation is most healthy, possesses beautiful and commanding views, and the access to all parts of London easy. Property in this neighbourhood lets and sells rapidly.—For further particulars, apply to Mr GEO. CLARKSON, Surveyor and Land Agent, 48, Penton-street, Pentonville.

SUPERIOR BUILDING LAND to LET, near Carlton-hill, St. John's-wood, and Kilburn-gate and railway station, 120 feet above the Thames, commanding views of Hampstead, suited for good class villas of 60l. to 120l. yearly value. Leasehold for 99 years. Rents from 3s. 6d. to 6s. per foot frontage. Address, Mr. BALL, 44, Regent-street, Piccadilly.

TO BUILDERS, &c.—An undeniable SITE for VILLAS, at CAVERSHAM, Reading, to be DISPOSED OF, on lease or otherwise, with accommodation, if required. Villa residences are much in request, and a capital return may be assured.—Apply to Mr. KNIGHTON, Caversham, Reading.

BUILDING-GROUND at CAMDEN TOWN, TO BE LET, for third and fourth rate houses. Builders can be accommodated with Bricks and Timber at the market price, if required. Apply at Messrs. SPRINGFIELD and COOPER'S Lime-wharf, King's-road, Camden Town; or at the Constitution opposite, where plans of the estate may be seen.

MUSWELL-HILL, HORNSEY, HIGH-GATE, or near those Places.—WANTED, a FREEHOLD or LONG LEASEHOLD DETACHED COTTAGE, containing Eight or Ten Rooms, with a Stable and large Garden, or to have some Land attached.—Parties who can offer an acre or two of Free or Copyhold Land in the above situations will also send particulars to S. R. Post-office, Moorgate-street, Bank.

SUSSEX.—TO BE SOLD by PRIVATE CONTRACT, a most desirable small FREEHOLD FARM, within a mile of a first-class station on the Brighton line, and within a short distance of a church, consisting of about 27 acres of arable and grass Land, in a high state of cultivation, with a Farm-house, ample Farm Premises, and two Cottages, all in good repair. The situation is high, dry, and healthy, commanding extensive and varied views, and is well adapted for erecting any description of residence, an abundant supply of good building-stone being on the spot.—Apply to Mr. G. F. PLAYFORD, Grove Farm, Crawley, Sussex.

WATERLOO BRIDGE WHARF, Commercial-road, Lambeth. These desirable FREEHOLD PREMISES, with thirty arches under the Waterloo Bridge Road, TO BE LET on LEASE or SOLD.—For particulars apply to HENRY MYETT, Esq., 8, Bank-st., 31, King's-road, Bedford-row.

MAITLAND-PARK, HAVERSTOCK-HILL, HAMPSTEAD-ROAD, land-tax redeemed.—TO BE LET, upon building leases, for ninety-nine years, desirable BUILDING SITES upon the above Estate. The continual demand for houses in this locality, and the picture-que position of the property, adjoining the grounds of the Orphan Working School, render this a desirable opportunity for builders or gentlemen wishing to erect villas for themselves.—For plans and terms apply to the Secretary of the Orphan Working School, 32, Lombard-street; Messrs. TERRELL and CHAMBERLAIN, 30, Basinghall-street; the Architects, Messrs. WEHNERT and ASHDOWN, 42, Charing-cross; or at the Lodge attached to the school.

MARINE.—FREEHOLD BUILDING LAND for SALE, about SEVEN ACRES, at Hythe, Kent, having nearly 470 feet frontage southward towards the sea, and 650 feet in depth eastward towards the west. The plot is capable of being laid out in a tes for the erection of upwards of sixty semi-detached and other houses, with gardens and pleasure ground. The Corporation of Hythe have lat ly out upwards of 2,000l. in the erection of an ornamental building with warm baths immediately adjoining the site, and have also formed an excellent promenade protected by a sea-wall next the beach. The inland scenery is extremely beautiful, and the surrounding country affounds walks, cycling roads and pleasant walks. In consequence of Her Majesty's Government having established at Hythe a school for musketry in connection with the Minie rifle practising ground, there is an increasing demand for houses in this place with but little accommodation at present; it is therefore presumed that it would be an eligible investment for capitalists, builders, and others.—Further particulars may be obtained on application to Mr. S. B. WILSON, Architect and Surveyor, No. 7, Frederick-place, Gray's-inn-road, London, where plans of the property may be seen.

TO BUILDERS.

LEE, near BLACKHEATH.—FRONTAGES TO BE LET, for detached or semi-detached villas, on the Belmont Estate. This estate contains the finest sites for building purposes anywhere round London, and good villas are in great demand, on account of the situation being lofty, of well drained, and exceedingly healthy. Assistance will be afforded to responsible parties.—For particulars, apply to Messrs. J. and C. W. TODD, Millers-row, Brompton, London, or Belmont, Lee, Kent, or Messrs NELSON and INNES, 8, Whitehall, and of Messrs KIRKMAN and ENGLEHEART, King William-street City

TO BUILDERS.—FREEHOLD BUILDING LAND TO BE LET on LEASE, for a Term of 999 years, at Kenwood, Harrow, Stratford, Mitcham, Wimbledon, Chertsey, Ash, near Aldershott Camp, and Wharf-road, City-road. Cash advanced, if required.—Apply to Messrs BLAKE and SNOW, Solicitors, 22 College hill, Cannon-street, London.

WOODCOTE ESTATE, CARSHALTON, SURREY.—TO BUILDERS and OTHERS.—To be LET for a term of 99 years, adjoining the Carshalton Station, on the London and Epsom Railway, several plots of BUILDING LAND, eligibly and delightfully situated close to the picturesque village of Carshalton. The situation is most desirable, and commands extensive and varied scenery, and is peculiarly applicable for the erection of detached and semi-detached villas. Leases granted direct from the freeholder, and no may advance, if required. The Land is situate thirty minutes' journey from London-bridge. For terms and to see plans, apply at the Office of the Architects to the Estate, Messrs WEHNERT and ASHDOWN, 42, Charing-cross.

GUILDHALL, May 10, 1856.—The Committee for Letting the City's Lands will meet at Guildhall, on WEDNESDAY, the 21st inst. at One o'clock precisely, to receive PROPOSALS for LEASES, in lots, of several HOUSES and PREMISES, No. 123, Fenchurch-street; No. 8, Bitter-square; and a workshop in Culver court, Fenchurch-street; No 1, Banner-street, Finsbury; Nos 1, 2, 3, St. Luke's-passage, adjoining; Nos 47 and 48, and Nos. 54 to 71, Banner-street; No. 3, Artillery-court, Chiswell-st; Nos. 36 to 31, Mark-street, Nos. 1 to 4, and a workshop, in Mark-place; No. 24, Matthew-street, No. 58, Great Tower-street; Nos. 102 and 103 Paul's-street, and Nos. 1 to 20, Finsbury-square; and Nos. 4, 5, 6, 7, Butcher-row, Ratcliff. Plans of the property may be seen, and further particulars and forms of Tender obtained, at the Architect's Office, Guildhall. FERDINAND BRAND, Comptroller.

HORNSEY-ROAD.—Eligible BUILDING LAND, adjoining the Hanley Arms.—TO BE LET on lease for 80 years, about the freehold, a compact piece of eligible BUILDING LAND, adjoining the Hanley Arms and fronting Hornsey-road. The present old houses (which will be included) to be immediately pulled down. No roads nor sewers required to be made.—A plan may be seen, and further particulars known on application to H. W. POWYS, Esq. Solicitor, 38, Russell-square; or Messrs DENT and SON, Surveyors, No. 36, Southampton Buildings, Chancery lane.

VALUABLE FREEHOLD LAND, Upper Holloway, near the Archway Tavern.—TO BE SOLD or LET on Building Lease for 99 years, direct from the freeholder, a piece of valuable LAND, near the Archway Tavern, Upper Holloway, having a frontage to an intended new street of about 500 feet, averaging in depth 150 feet to 175 feet. The party taking this land may build thereon an inn or tavern, a privilege not granted to the owners who have purchased the adjoining land.—A plan may be seen, and further particulars known on application to H. W. POWYS, Esq. solicitor, 38, Russell-square; or Messrs DENT and SON, Surveyors, 36, Southampton Buildings, Chancery-lane.

WORCESTER.—FREEHOLD BUILDING LAND, close to the City of Worcester, FOR SALE, at moderate prices, in respect of perpetual ground rents. The lots are admirably adapted for first-class villas, for which a great demand exists. Apply to C. C. H. St. Patrick, Esq. Solicitor, Worcester.

TO CAPITALISTS, &c.—WESTON-SUPER-MARE, SOMERSET.—Important and valuable FREEHOLD LAND for building, in the very centre of the town, the whole close to good roads, and to the sea. There is ample space (nearly four acres) for the erection of 80 or 100 houses.—Plans and further particulars of R. GUY PHILLIPS, Esq. Weston-super-Mare.

OLD FORD, near VICTORIA-PARK.—Valuable FREEHOLD BUILDING GROUND TO LET, with liberal and advantageous terms for immediately erecting houses, which are much required in this rapidly-improving neighbourhood, and which let and sell rapidly. For further particulars apply to Mr. LEE, CLARKSON, surveyor and Land Agent, 27, Penton street, Islington.

MILTON, KENT.—To Builders, Capitalists, Land Societies, and others.—Twenty-one Acres of Freehold Building Land, land-tax redeemed

MR. T. S. SMITH has received instructions from the trustees under the will of the late Wm. Harvey, Esq. to DISPOSE OF, by PRIVATE CONTRACT, a very valuable FREEHOLD ESTATE, distinguished as Parrock House, situated in Milton, Kent, within short distance of the town of Gravesend, consisting of a desirable family residence, approached by a carriage-sweep, through a park-like paddock, gently undulated, and beautifully planted and belted with fine ornamental timber, walled farm, pleasure, kitchen garden, and orchard, in all about twenty-one acres, having good frontages to the old London road, and offers are to capitalists and building societies an estate well situate for the erection of villa or cottage residences, within a short distance of the North Kent and Tilbury Railway Stations. Printed particulars and cards to view obtained of Mr. T. S. SMITH, Auctioneer, Surveyor, and Estate Agent, 44, Lombard-street, and Upton, Essex, where a plan may be seen.

TO BUILDERS, CONTRACTORS, AND OTHERS.

TO BE DISPOSED OF, a BUSINESS, carried on for some years with good success by the Advertiser, in and around a seaport town in the West of England. The premises, near the water-side and most convenient, may be rented or purchased.—For particulars, apply to Messrs. W. and T. MAY, Builders, stoke, near Devonport.

TO BE SOLD.—A Light Mechanical BUSINESS, with a good Private Connection.—For particulars, inquire of Mr. ANGE, 284, Crescent-street, Euston-square, New-road.

TO PLUMBERS, PAINTERS, &c.—An excellent opportunity offers to a respectable Man, who can command about 150l. and wishes to establish himself in the country, a few miles from London.—All letters to be post paid, and addressed, S. A. Office of "The Builder."

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural, Civil Engineering, and Mechanical Drawing; Colouring, Shading and Tinting; Ornamental and Water-Colour Drawing; Perspective, Isometrical, and Geometrical Drawing, Making Finished and Working Drawings; Preparing Specifications, Taking out Quantities, Estimating, Measuring and Valuing Builders' Work, &c. &c. Terms: Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter. There are no vacations, the terms include the whole of the above, with the use of Drawing Boards, T Squares, Plans, Drawings, Models, &c. Prospectuses and full particulars may be had at the Offices, 24, Guildford-street, Russell-square.

MEDIÆVAL ILLUMINATION.—WANTED, a GOOD HAND.—Apply, by letter, to F. SKIDMORE and SON, Coventry.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.
N.B. A few New and Second-hand Levels and Theodolites always for Sale.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for H.C. Water-pipes. Vulcanized Rubber Springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.
Diving-dresses of superior make, and improved Vulcanised Rubber Supply-pipes for ditto.
Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order
N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., RYDE, ISLE of WIGHT.—Second Testimonial.—"March 10th, 1852. In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 60 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster

No.	1	1½	1¾	2	2½	2¾	3	3 in.
9d.	11d.	1s.1d.	1s.3d	1s.5d.	1s.7d.	1s.9d.	2s.	2s.3 d.	2s.6d.	2s.9d.

Super-strong stout quality.

2	2½	2¾	3 inches.
2s.	2s.3d.	2s.6d	2s.9d.	3s. per yard.

No. 6. A cheaper hose to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.

1	1½	1¾	2	2½	3 inches.
8d.	10d.	11d.	1s.	1s.3d.	1s.6d. per yard.

The hose is Burnettized at an extra charge of 3d. per yard. Union Joints, Branch Pipes, and Jets, are also supplied.

TO ENGINEERS, MACHINE MAKERS, AND OTHERS.

CHARLES MACINTOSH and CO. Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all degrees of elasticity, recommend this material as capable of sustaining the action of hot or cold water, gas, steam, acids and grease. It is used extensively for valves in marine and land engines, railway buffers and springs, washers for pipe-joints, hose and pump valves for gas-holders and pumps, alkali caterns, &c. &c. Articles moulded or otherwise, made to any size or figure—Address, 3, Cannon-street West, London; and Cambridge-street, Manchester.

THE LONDON and WESTMINSTER BANK issues CIRCULAR NOTES of 10l each, payable at every important place in Europe. These notes cannot be used without charge, and they are cashed abroad free of commission. The Bank also issues, free of charge, Letters of Credit on all the principal cities and towns in Europe. Letters of Credit are issued only at the Head Office in Lothbury. The Circular Notes may be obtained at the Head Office in Lothbury, or at any of the Branches, viz:—
Westminster Branch, 1, St James's-square.
Bloomsbury ditto, 214, High Holborn.
Southwark ditto, 4, Mount-pleasant, Borough.
Eastern ditto, 87, High-street, Whitechapel.
Marylebone ditto, 4, Stratford-place, Oxford-street.
Temple Bar ditto, 217, Strand.
The rate of interest allowed on deposits of 200l and upwards, at the Bank or any of its Branches, is now 5 per cent.
J. W. GILBART, General Manager.

TO CAPITALISTS AND OTHERS.

EAST COWES PARK, intervening between her Majesty's Royal Domain of Osborne and East Cowes, to be purchased and further developed under a Deed of Arrangement between the Proprietors. Capital, 400l. to be raised by subscriptions of not less than 100l. each many of which are already subscribed for, payable by instalments. The estate comprises 146 acres; has been expensively laid out; many mansions and other buildings have been erected, producing a large income, and possessing unusual productive and capabilities for greatly increasing it; a pleasure-garden of 22½ acres formed in the centre; three miles of iron palisading, lined with gates, &c. and is so situate that her Majesty and suite proceed through this private estate dire t to Osborne. The property has been valued by two eminent surveyors at above 35,000l. and it is calculated will ultimately realize upwards of 50,000l. with interim increasing income. Each subscriber will become a proprietor to the extent of his subscription, and will receive, annually, 5 per cent. interest, and each subscriber to have the option of taking part of the land in lieu of subscription.—Prospectuses, with pictorial view and plan, can be obtained at the Offices of L. G. WHITEHURST, Esq. 6, Guildhall chambers, Basinghall-street; of Mr. LANGLEY, Clarence-cottage, East Cowes-park; and applications for the unsubscribed remainder to be made personally or by letter to the Secretary of the United Orders Assurance Company, 63, Pall-mall, where prospectuses, view, and plan may be obtained, the surveyor's report inspected, and engineer's specimens of the clay produce seen, and every information ascertained.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Standees and temporary Awnings on shar of hire. Orders per post receive the most prompt attention.—WILLIAM PERRY, 11, 12, Bore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

The Builder.

VOL. XIV.—No. 693.

THE roads through London require assistance. Within a short time very great advances have been made in the character of our civic buildings: the leading thoroughfares and defiles have been adorned with many edifices of a style and pretensions hitherto unknown. The Exchange was the first grand innovation; then the Coal-Exchange; the various palatial insurance offices; the Hall of Commerce; then club chambers: a great extent of houses, lateral upon old streets and lanes, has been demolished, and renewed in a material and fashion, at all events, superior: still, with few exceptions, the causeways are narrow and tortuous as before.

Cannon-street is an exception. This is really an ornament to the City; and offers for commerce an opening without which the vital regions of the metropolis must, in the plethora of trade and population, have stagnated, if not ceased to pulsate.

Moorgate-street, on the other side, added an artery to the constricted system of circulation. These two improvements emanated from the civic functionaries! All honour to them for municipal care and forethought. The half million yearly, reported to be within scope of their rental, has not been wholly misapplied; nor has the change wrought in the capital, so far as such alterations were carried out, been subversive of their interests: on the contrary, the returns produced by the remodelled districts have repaid the enterprise and spirit by which they were dictated.

By one, however, who looks prospectively at that which has been done, and that which yet remains to be effected, there is a danger to be apprehended: it is, that the narrow ways of ancient London, though margined by palaces, may hereafter, when amendments shall be further carried out, become comparatively mean as contrasted with the routes which will certainly be constructed.

As the limits of the city are destined to comprehend the whole circuit of the great metropolis, so the lines of communication must not only be multiplied, but enlarged. It will be impossible to change the width of the central streets, already finished and embellished with noble structures, but new lines must be opened. Every other capital has its grand causeway,—Paris, her Boulevards; Rome, Il Corso; Naples, the Gran' Strada di Toledo; Dublin, Sackville-street; and New York, the imposing Broadway. London has—what? The Strand, and Holborn and Oxford-street,—all good as central routes for their several quarters; but what are they for the Queen of Cities? Look at the strictures, the straits, the narrows and rapids,—no, not rapids, but too often, dead locks, of the 'bars and crossings in so vast a torrent of rolling life!

There ought to be in London a great central duct, to which all others should be tributary and subordinate,—a "Via Condotti," a "Corso," or a "Via Sacra." This line should not only be direct, but intermediate between Holborn and the Strand: *it should also be level*, and the line pointed out seems to favour this end most to be desired; for the levels between Leicester-square and Paternoster-row, as laid down on the sewers' map, range between 46 and 56 feet, save only in one point, and that is at Farringdon-street hollow, where the gauge is just 26 feet above tidal level.

Hitherto, all wains approaching the City had to descend 30 feet and to rise again to the same elevation. The horrors of Snow-hill are too well known to need observation. Ludgate-hill is not so penal to our draft-horses, yet it is on a steep incline and heavy pull. All this might be obviated by a viaduct across Farringdon-street.

This road should commence from the City (in ancient times all our grand conceptions had thence their source and origin) in a direct line westward: it should open out from the statue of Sir Robert Peel 100 feet wide, slick through Paternoster-row. Leave the valuable shops in St. Paul's-churchyard if you like, that is, if they are too costly to pay the tribute to our great architect, Sir Christopher Wren, now deferred 200 years! Cut on thence, with the same *latitude of design*, straight to Gough-street,—thence to Carey-street (across Chancery-lane),—thence, diagonally, through blocks of wretched and dingy buildings, bounded by Vere-street, Wild-street, Stanhope-street, to Hart-street, and thence across St. Martin's-lane, between New-street and Long-acre; so crossing St. Martin's-lane and issuing into Leicester-square (north side) without interfering with Cranbourne-new-street, except at the point of junction.

Thus the present business streets would be spared, and the slums, only, opened out to fresh air and daylight. The noble civic esplanade would not only confer a value on that which, in its present condition, is a pest and a disgrace, but would enhance the worth of the vicinal streets, which are always sure to rise in estimation as the neighbourhood becomes respectable.

In so extensive a clearance, a great displacement of the working classes must demand new locations: it would be easy, by properly digested plans, to meet that requirement, so as not to drive them to quarters too remote from their avocations. Ranges of new and lofty buildings, with noble and imposing shops below, might be adopted, as in Victoria-street, to the improved health and increased comfort of working men and their families; and the traverse streets might also be arranged upon a similar plan—suitable not to M.P.'s and rich bachelors, but for honest workmen, their wives and children.

A main street worthy of the metropolis ought to be 100 feet wide. It is needless to refer to instances to prove that the carrying out of a plan which has been well conceived, with spirit, must always pay: the streets and squares of Belgravia prove it, and Mr. Jackson's *ultra latitudinarian* new roads at Brompton may also be cited in evidence of the fact, long since prognosticated, that "the liberal soul shall be made fat." A smaller site is always accepted as more valuable in an open position than a larger in a close one.

The long-neglected and slumbering condition of the civic estate in continuation from Farringdon-street to Islington,—the neutral and rude waste of that most valuable plot of ground on which the prison formerly stood in Farringdon-street, as well as of the other vacant site of the City Compter (next Christ's Hospital),—the neglected and *disgusting aspect of the river slums*, besides smaller blemishes everywhere, reproach the authorities with sluggishness.

Were there but one mind with one authority amongst them, and the rental no more nor less than it has been for years past; then, as cunning capitalists, calculating upon only the profits of improved value in judicious outlay, the City would not have been left as it has been, mapped out and ammorcelled in its *pristine complexity*:—no, the crooked ways would have been made straight, and the rough places plain.

What Napoleon has done for Paris, at an enormous outlay, might be effected here, with greater facility, as well as with less violence to vested interests.

It is but lately that works of an extensive nature,—such as the great plan of sewage, and the oft-mooted construction of quay-walls for the river,—have been received as public problems: the admission of the idea is a great advance towards the consummation of the design. Of all these the *Builder* has often treated. Engineering and architectural taste and skill are notably not deficient in the land. All Europe, as all colonies and foreign states, bears evidence of their achievements. Now, in the shade of our universal peace, the talent of Britons will, it is hoped, be turned towards the transformation and embellishment of the world's great commercial metropolis. Abroad, *the vista* has been always valued, whether in city-ways, parks, or avenues. Look at the Champs Elysées, Versailles, &c. HERE we obtruncate every open route: Pall Mall! Whitehall!! and Lincoln's-inn-fields, wholly *built in!!!*—all spoiled in the cooking.

The great central thoroughfare, to be in keeping with the Queen of Cities, should be in no part less than 100 feet wide: it would infallibly extend (in time); retrograde from Long-acre across Leicester-square, and take up the line of Piccadilly; thus dividing the whole area of trade, and liberating the constricted ducts of Holborn and the Strand. Whilst in progress, all the proximate quarters would keep pace with the enhanced value and merit of the "Via Sacra" here sketched out.

DESIGNS FOR CAVALRY BARRACKS.

THE rooms at Burlington House being required by the University of London, the exhibition of the Designs for Barracks had to be closed, as we apprehended in our last notice; and we believe the drawings by this time will have been stowed away in the attics of the building. The claims of unsuccessful competitors as to their designs—to which we have given expression—probably will in some manner be regarded. Still—however right on the part of Government, not to omit such consideration for the competitors in question—we who have preferred their claims, must not allow it to be supposed that any compensation will accrue to them, by the mere possession of their drawings.

For the competitor the drawings can be comparatively of little use—even to himself, after a competition. We have tried to show how some general advantage might be gained by keeping works longer together, and arranged for easy reference and comparison; and, believing that such course would afford the main advantage that any individual should calculate upon, under existing circumstances, in competitions, we continue to regret that the last opportunity has not been turned to adequate account.

Considering the heavy personal interests,—it is seen to be one of the difficult points in the competitions question, that at the close of the contest, and then alone, are the best materials gathered, from which to initiate the actual building design. To cast back all such valuable contributions, or to keep them huddled up where they cannot be inspected, may be consistent with justice to individuals—though little serviceable to them; but, neither course is consistent with that progress which should be a common aim. We are therefore, on due consideration, strongly disposed to urge, that the principle of remunerating unsuccessful competitors, and making their ideas serviceable, is generally the correct one. Limiting the number of competitors, however, is objectionable,—if new ideas are the object.

In the position of the question of barrack accommodation, as set forth in the Committee's report, the chief point of difference between infantry and cavalry barracks affecting the disposition of *plan*, appears to be involved with the requisite of the riding-school. This is to be so placed, "that every horse may be

brought from his stable into the riding-school without going into the open air." Therefore, whilst in the infantry barracks, the competitors have variously chosen to make the parade ground, or a covered drill-court, or the stores, or the canteen, or the commanding-officer's quarters, what we may call the *focus* of the plan; in the fresh case, each of these presumed centres of distribution is almost of necessity ceded to the riding-school; and there are extremely few of the twenty-five sets of drawings which endeavour to group the quarters round the parade-ground.

The committee "see no objection to the practice of allowing the men to live in rooms over the stables, provided that care be taken in the construction of the ceilings of the stables, and to prevent the foul air from entering the men's rooms through the windows." Nearly all the competitors have therefore kept to this arrangement,—which is certainly a very convenient one. The point, however, still deserves consideration: objections will not fail to be expressed to the arrangement,—allowing that by proper contrivance and attention, noxious effects might be reduced to a *minimum*. The stalls, it may be useful to notice, in their dimensions are directed to be 9 feet by 5 feet 8 inches. A width of 6 feet had been named in the case of the officers' stables to the infantry barracks. The horses, as at present, were to stand with their heads to the external walls, down each side of a 12-feet passage.

The number of horses to be provided for, on the usual scale of cavalry regiments, is 271 troop-horses and 50 officers' horses,—the latter in separate stables. The number of men, exclusive of officers and non-commissioned officers, is set down as 334. There are 27 officers, and the same number of non-commissioned officers, —the latter consisting of nine staff-sergeants, and eighteen sergeants attached to the "troops." Of the "troops," or divisions of cavalry regiments, there are usually six; and besides the regimental sergeant-major, these require (making up the eighteen) six troop sergeant-majors (answering to pay-sergeants of infantry), and twelve troop-sergeants. Thus, in some respects, the scale of accommodation is much less than in the case of infantry barracks, whilst a few additional features are required in the case of cavalry beyond what may have been mentioned. Such are the horse infirmary (also to be made capable of access under cover); and the forges, saddlers' workshop, granary, hay and straw barn, and foul litter-sheds. The other arrangements are the same for cavalry as for infantry, in proportion to the number of men.

Twenty-five designs for cavalry barracks having been sent in, and these being classified as we stated in the case of the designs for infantry barracks; the committee met on the 11th of December, and on the 14th, selected five designs, "as worthy of further consideration."

The list, as we find it, gives the names,—"Centaur" (Mr. Morgan's design); "Brevitas" (Mr. Young's); "Paritur Pax Bello" (Messrs. T. H. and M. D. Wyatt); "Y-Fynd Dwy-y-Fydd," and "Balaclava." On the 15th they made selection, as the names now stand. Messrs. Hunt and Stephenson's estimates, with 10 per cent. addition, were as under:—

No. 1. (Messrs. Wyatt)	£118,137
No. 2. (Mr. Morgan)	133,159
No. 3. (Mr. Young)	123,337

We may observe, that the estimates do not appear to have been "detailed estimates," in the ordinary sense, though they were, doubtless, made with care. We hear, however, that those for the infantry barracks are not satisfactory to some parties.

In a former number, we printed a description of the design of Messrs. Wyatt,—but we may remind our readers that in the plan, the men's quarters and stables form three sides of a quadrangle; in the centre of which is the riding-school building—along with dining kitchens, one for each troop, and together with library and reading-room, all reached by three covered ways from the quarters; that the horse infirmary stands at the back, and is reached also by a covered way; and that the parade is in front of the quadrangle just referred to, and is placed endwise, flanked by the officers' quarters on one side, and the chapel-school, canteen, hospital, and sergeants' quarters on the other. We may also add, with reference to the stables, that the troops are separated by archways through; and that from these last, the stables are entered, the doors thus being one at each end of the compartment for a troop. Each troop, however, has two stables, but communicating with each other. There are staircases to the quarters above, for each company: they are placed two next each of the three archways, the quarters having external galleries at the back. The foul litter-sheds are under these galleries. The dormitories open out directly from the galleries, as also do the lavatories. Each troop has four dormitories; the two sergeants' rooms being in the middle of the four,—thus, inspection as regards two of the rooms, would not approach to what most of the witnesses considered indispensable. We notice points such as this last, as it were interrogatively, and with reference to principles of arrangement,—what principles have been adopted as the basis of selection;—or whether any have been considered and set aside;—or is it left to us to show that before any *model* building can be commenced, the *desiderata* in such buildings must be assessed and placed in the order of their logical sequence? We have before expressed fear that the report, even by its precision in some things, has fettered invention, the real object being merely to afford information upon the military points. Here, again we touch upon a matter of great importance in the competitions question—the nature and limits of the "instructions." Again, if there are objections to dormitories lighted from the sides, they would appear to hold against the present design. The beds, thirteen in each room, are placed round the room; and what is in the centre marked with the letter T, it is due to the designers—after what was said in a letter in our pages—to say, appears to be a table, and not what was supposed. The plan under notice has the roadway all round, next the external wall, a feature which it might be well to adopt in all cases. It is here shown to be applicable for ball-practice. The cricket-ground, cesspools, and gas-works are to be provided externally. Were it shown to us that ready access to the parade-ground need be not a primary feature, or that the quarters need not necessarily look on to the parade, we should regard the arrangement of this plan as highly successful; for, as its authors say, by it every trooper is enabled to go from his bed-room to his stable, riding-school, dining-room, and reading-room under cover, whilst every troop-horse may be taken from its stable to the riding-school and the horse-infirmary under cover, and may be also cleaned and shod under cover.

Mr. Morgan's plan is even more successful in the points just mentioned, though it appears to be defective in some other particulars. The main group of buildings has a corridor of communication—15 feet wide and 14 feet high—running the whole length,—from the horse-infirmary at one end, to the officers' stables at the other. The riding-school is connected with it in the middle of its length; and ranges of buildings open out from it, four on each side,—for the six troops, and stores. Also leading from the same corridor, and intermediate to the quarters, are two smaller blocks of building, containing staircases, litter-sheds, and conveniences, and terminated in each case by a ventilating shaft. The official buildings form a front range of the same group next the parade; and, with the remainder of the barrack buildings, that part of the plan closely resembles the same architect's design for infantry barracks. Thus, it will be observed, the principal part of the plan is an arrangement of buildings enclosing six courts. Of these, the middle court, at the rear of the riding-school, is an exercising court, with a covered ride around it. At the front, the two courts outside, it would seem, would have to be crossed to get to the stores; and the entrances, we fear, would be found inconvenient. Ten feet, in most cases, may be wide enough for a cart-way; but is scarcely so, considering the oblique course which would have to be taken, according to the plan. It also seems to us that in planning entrances to stables, every turn that the horse would have to make is a defect. The dormitories (in this case also over the stables) are arranged on a principle generally resembling that of the design for infantry barracks,—but, there are separate dining-rooms, viz. one dining-room over the horse-infirmary and one over the officers' quarters,—three kitchens being attached to each dining-room. Grouping the quarters and stores round courts of their own, in one view, is better than another arrangement,—having regard to the distribution of the stores, and the opportunity thus afforded to the private of passing from one part of the barrack to another in undress. Mr. Morgan's design is also put forward as well planned for the duties of an inspecting officer, who could walk through all the stables and barrack-rooms, and "arrive at the point at which he started." But that which appears most to require notice is the arrangement of contrivances for effecting ventilation. In the dormitories, the arrangement contemplates the admission of fresh air by the windows, which are at the top of the room, with perforated glass and regulating swing casements; and from the fire-clay stoves, which project, and have a warming-chamber communicating with the open air. The escape would be at the ceiling. In the stables there is a fresh-air flue between each stall,—size, 14 inches by 14 inches, —admitting the air over the level of the horses' heads, with balance-valve. The provision for the escape is by flues 14 inches by 9 inches, from the ceiling, and passing up the walls into the roof; also by flues, 9 inches by 9 inches, opening immediately over the mangers; by others, in the iron columns, for the removal of products of combustion from the gas-burners; and, on both sides, by the windows, which are hung on centres. To the windows externally, and forming an additional covered way all round, is an overhanging penthouse roof, which might divert effluvia from the dormitories above; and, constructed of non-conducting materials, would promote equable temperature. The stables of each troop are not sub-divided; and generally, as in the barrack-room, large spaces are advisedly chosen with regard to ventilation. The two extracting-shafts already mentioned are proposed to be heated by gas-jets. The whole plan is put forth as devised so as to gain as much natural or spontaneous warming and ventilation as possible,—by extension of the buildings to the sun and air, and by avoidance of confined spaces. Is this principle, however, fully carried out in the quarters of some of the troops? "The rooms," says Mr. Morgan, "also present their length to the action of the sun and air,—an important feature in the warmth and cheerfulness of a chamber," and "the windows are planned of moderate size, to avoid large heating or cooling surfaces, but with a proper regard to cheerfulness and health."

An ordinary plaster ceiling and floor, being obviously unsuitable, Messrs. Wyatt proposed girders and joists of rolled iron, with concrete filling, and boarded floors above. Mr. Morgan proposes brick arches. He rejects the common lime-and-hair plastering as too absorbent, and proposes to cover the whole of the brickwork with a thin coating of Portland cement. The paving was to be laid with channelled vitrified bricks in cement, on ten inches of concrete, and the drainage he proposes to be a compound of underground and surface drainage,—gratings 45 feet apart, being fixed to the drain along the heel-posts, and self-acting apparatus supplied with water from the rainpipes and sinks, being provided to flush the drain-pipes.

In Mr. Young's plan, the general principle of distribution appears to be the same as in the design last named; but the quarters are somewhat differently arranged. If we suppose two cruciform blocks of building to be placed side by side thus, ++; and then to be joined horizontally at the head and foot, we shall have gained a general idea of the plan. Of the cruciform portions, each is composed of the quarters of three troops, and the officers' stables,—the latter inside, and connected with the riding-school, which thus is in the centre of the whole group. The horizontal line to be supplied at the foot or front, contains the official buildings and chapel-school, and the other line has in the centre the infirmary stables. Other parts of the general plan do not differ essentially from

Mr. Morgan's arrangement. At the intersection of each cross is an octagonal block of building, containing staircases, and tanks for the supply of water, and having a ventilating shaft in the centre. Corridors of communication run round the octagon,—with archways for carts. With these corridors are connected the covered ways which run along one side of each stable, and across the barrack. Covered ways are provided all round both quadrangles. In the upper floor, a dining-room and kitchen is provided at the commencement of each wing. Out of this leads the 9 feet corridor of the rooms. Mr. Young thinks that a competing architect is perhaps the last person who should furnish an estimate of his own design.

No. 4, with the motto, "Y-Fynd Dwy-y-Fydd," by Mr. H. Prichard, has the quarters arranged in the plan of a large segment of a circle, on the argument that this arrangement combines concentration and convenience of supervision, with economy of construction,—as to the latter in the item of roofs. Officers' quarters form a detached building in the chord of the arc, and at the middle thereof. Behind them, at right angles, and connected with the quarters, is a covered drill-court, and in the same line behind the quarters is the riding-school. The horse-infirmary, wash-house, stores, hospital, and other important buildings, are placed detached, at the back of the ground. The front of the plan is marked as a cricket-ground. The married privates' quarters are attached to one end of the riding-school. Over part of the latter is the chapel-school. In the stables there is a middle wall, and the horses' heads are turned in that direction,—or leaving a gangway next each external wall. The arrangement is turned to account in the dormitories, the fireplace being provided in the middle of the room. Covered ways, back and front, are shown in the chief parts of the plan, but do not communicate with some important buildings. The staircases are external. The dormitories are proposed to be divided by partitions of corrugated iron, double, with a cavity. The same material is used for ceilings. The corridors of the barrack-rooms are to serve as dining-rooms, flap-tables being there proposed. The ground for parade, as shown in the plan, would be limited to the quadrant-shaped spaces between the men's and the officers' quarters; or the "cricket-ground" would have to be gravelled and appropriated.

The fifth design of the five first selected, with the motto "Balaclava," was numbered 24 in the rooms. The parade-ground was shown as laid out in lawns, and it had other features which must be considered as defects,—the covered ways to the riding-school being very round-about from some of the quarters,—the school being towards one corner of the ground; and the rooms of the married privates being shown as opening from the corridors of the privates' quarters. The central position was given to the officers' quarters. The plan was devised on the scale of eight troops.

In No. 6, "Cordon," Mr. Thorold placed the riding-school, with the quarters connected at right angles, but somewhat radiating, so as to be less confined in arrangement than in the case of his design for infantry barracks.

In No. 7, "Con Amore," Mr. Kerr kept to the principle which he followed in his design for infantry barracks. As in that case, the officers' and men's quarters are grouped round the parade-ground, so that the stables have what seems to us the *advantage* of direct entrances at the ends, from the parade or an ample space of covered way, instead of, as in some cases, from an inconvenient passage. The covered way runs along the back of the stables, and communicates with the riding-school,—which occupies a central position, along with the chapel-school, in the line of buildings on the side of the parade opposite the entrance-gate. The troops are, as before, in detached buildings; and the plan is so arranged, by provision of recesses at the ends of the stables, that horses could be turned at the entrance to the covered way with as little obstruction to it as possible. The litter-sheds are across the covered way, separately ventilated. The dining-kitchen in the building of each troop occupies a position between two stables. The accommodation for married privates is on the same principle as in the design for infantry barracks,—the plans generally resembling one another.

There is both care and merit in the design numbered 10, with the motto "Britannia," by the same hand as one of the designs for infantry barracks; and in No 11, "Adequito," apparently by Mr. H. H. Fulton, the same attention to ventilation and to general construction is shown as in the design which he also had in the collection down stairs. So much labour as he has given to his drawings and specifications, should offer much that would be valuable in barrack-building. We confess to some apprehension as to the possibility that the manuscript matter of the designs was not always read. Another design, which appears to be by the author of a set down stairs (No. 13, with the motto, "In spe," in a horse-shoe), adopts the circular form of plan: it is difficult to see with what reason. There is more of point in the placing the stables and men's quarters away from each other,—whatever may be thought of the principle.

In No. 18, "Pugnamus Vincere," the panopticon principle is boldly adopted, with the riding-school (octagonal) as the centre to the stables and quarters radiating from it. The ablution-rooms are at the ends of the stables, and the married women are provided for in floors over the ablution rooms. In this design lines of rails are proposed to be laid along the stables, and intersecting them, or concentrically with the riding-school; and they communicate with the granary, and other parts of the barrack. The officers' quarters are at the front of the ground, but joined to the men's quarters by a covered drill-ground. No. 22, by Mr. W. R. Farrell, has a general plan of octagonal form, with bastions. No. 27, "Curragh," Mr. J. Constable, like the plan by the same author, for infantry barracks, is also made defensible, having bastions at the angles, and intermediate redans in the long curtain walls. These bastions and redans are the sites of the hospital, suttler's establishment, married soldiers' quarters, wash-house, gas and water works, and stores for coals and forage. The men's quarters and stables are in the centre of the ground; and together with the officers' stables, form two squares, separated by the riding-school. The officers' quarters are at another part of the ground, across the parade.

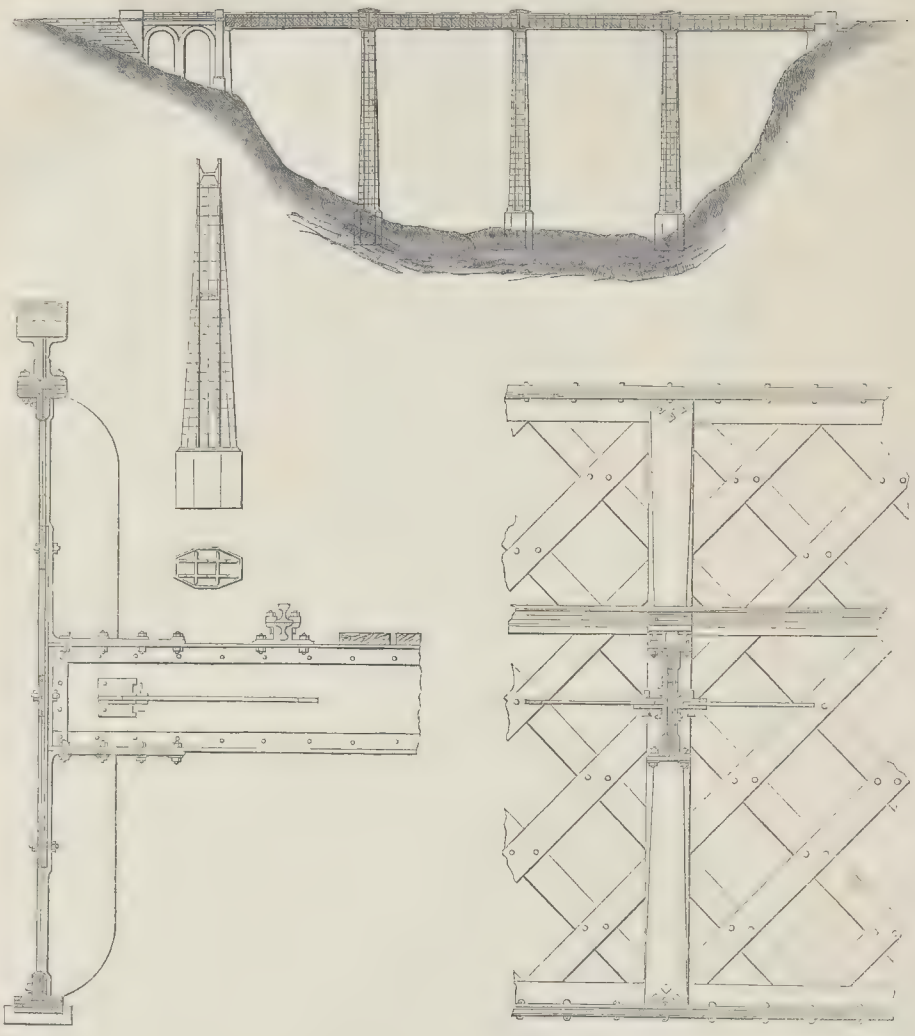
We did not notice in the collection at Burlington House, a design by M. Hector Horeau, shown by a photograph and description now before us; but the opinions on which it is founded may be worthy of attention in this article. Part of Mr. Thorold's *plan* resembles it, at first sight. With one general plan, the author contemplates a barrack capable of being used with little modification, either for infantry or cavalry. At the outset, he lays down as a principle, that a barrack should be only a durable camp. This would seem to be quite the opposite of what has been acted upon by most of the competitors in the late competition. Amongst other points which he prominently advances, is that of the importance of a plan which may conduce not only to classification of ranks, to facility of superintendence and communication, to economy of construction and working, to sanitary requirements, and to military education; but which also by the very order and simplicity of its arrangement, may produce a constant impression upon the soldier. His plan also recognizes the value of impressions derivable from objects of nature; avenues of trees and grass-plots being introduced with an effect which has been hardly sought for by others. For the men's quarters, he advocates the adoption of rooms or halls of considerable internal height, with partitions half the height,—and this arrangement he believes to recommend itself not only because the contrivances for ventilation required where there are upper stories, are, in his opinion, only expensive and ineffectual palliatives, but because he also thinks his arrangement as contrasted with that of small rooms, is more consistent with convenience and superintendence, as with considerations connected with morality as well as discipline. He also believes that in placing the rooms of the men over the stables, every object to be attained in a barrack, suffers. He proposes a large covered court (which would be the riding-school in the case of a cavalry barrack), measuring 360 feet by 120 feet, out of which open, on each side, the galleries or compartments for the several companies of infantry, or in the case of cavalry regiments, the stables on one side and the dormitories opposite. The covered court or riding-school opens from the grand parade, next which are the officers' quarters; and at the further end of the plan are the chapel-school, and canteen and other buildings, and a large space of ground symmetrically arranged, to be devoted to [illegible] amusements. There are roads for the "service," round the plan, lined with trees, and these can be entered by side gates, placed obliquely at the grand entrance, which is recessed, and is in the centre opposite to the covered court. In the residences of the officers, and other principal buildings, effect is not neglected; whilst the men's quarters have somewhat the character of sheds. The design, however, presents many useful hints in the sanitary aspects of the subject, which we cannot further allude to. M. Horeau's photograph, showing on one sheet of paper, the whole of his drawings, affords the hint as to a mode of turning the competition to account. Our correspondent (see the note below) has got hold of the right idea; but *photography* might answer all purposes.

In here terminating our series of notices of an architectural competition, which certainly has been the most remarkable we have been called upon to notice,—we again urge, that it has yet to be turned to account. It has cost us no small amount of labour and time to give the few particulars that we have been able to place in print. It has been simply impossible for us, without neglecting every other object, to do justice to the subject; but in labouring through the mass of material before us, we could not help often feeling a misgiving whether the members of the committee had done as much. It is calculated that 1,100 or 1,200 drawings were sent in, and there were probably twice that number of pages of manuscript.*

LATTICE BRIDGE ON THE ST. GALL AND APPENZELL RAILWAY.

WE are indebted to Mr. Villiers Sankey for particulars of the St. Gall and Appenzell Railway, which was opened on Easter Monday last, and for the details of a very remarkable Lattice Bridge which carries the railway over the Sitter river, given him by Mr. Hartmann, the chief engineer for the line.

The railway has had many difficulties to contend with, inasmuch as St. Gall is the highest town in Europe, being 2,050 feet above the level of the sea. The gradients are therefore necessarily very steep, in general, in order to get up to the level of the town; but what makes the difficulty still greater is the number of cross valleys that interrupt "the even tenor of the way," and necessitate the construction of lofty viaducts to span the deep ravines across which the railway has to be taken at an enormous height above the surface of the ground: several of these are of stone, and three of iron, namely, the one over the Thur, near Wyl; that over the Glatt near Flawyl; and especially that over the Sitter, at about 3 miles distant from St. Gall, which is about 560 feet long, and 200 feet above the water of the river. It is a wrought-iron lattice bridge, supported upon cast piers, which rest upon light stone pedestals, founded upon the solid rock. These stone foundations of the piers are 40 feet high, the cast-iron piers being 161 feet 5 inches high, and at the base 20 feet in the direction of the



* The design for infantry barracks—No. 5, "Victoria,"—is by Messrs Guillaume and Campbell

We append the letter above alluded to. It refers to what it would be desirable to do in *all* competitions,—whether competitors have pecuniary compensation or not.

"SIR,—I would suggest that, should Government determine *not* to remunerate the architects as proposed in your last number for their designs submitted in the late competition, they, the Government, should be solicited to cause reduced copies of *all* the drawings to be lithographed: it would render them more useful for general reference, and the presentation of a copy of the work to each architect concerned would, I think, be appreciated not only for its great value, but also as an act of graceful courtesy to those gentlemen who have done so much towards the solution of a question really of importance to the nation at large. I cannot think that, under the circumstances, the necessary outlay should operate as an objection. Possibly photography might be of service to reduce the scale in the first instance.—E. B."

ST. GALL AND APPENZELL RAILWAY.

Lattice Bridge over the Sitter River.

Details of Bridge over the Glatt.

length of the bridge, and 40 feet in the direction of its breadth: these piers are smaller as they rise, having a batter of $\frac{1}{7}$th. The lattice frames, two in number, which support the roadway, are 13 feet 9 inches deep, and the rails are placed a little above the neutral axis, being 7 feet 10 inches above the lower flange of the lattice. These lattice frames are formed of bars of wrought iron, 5 inches wide, and $\frac{5}{8}$ of an inch thick, bolted in the usual manner; and crossing one another diagonally, they are strengthened by upright bars placed at intervals, 8 inches by $\frac{5}{8}$, which are stiffened by angle and vertical irons, as shown in the accompanying drawing of the details of the bridge over the Glatt, which is of similar construction. The two centre openings of the viaduct are 137 feet 9 inches span, while the two nearest the land, one on each side near the abutments, are 129 feet 10 inches between the supports.

This bridge contains 1,001 tons of cast-iron, at 22*l.* 1s. 2d. per ton; 238 tons of wrought-iron, at 33*l.* 14s. 6d. per ton; and 24 tons of iron, in bolts, nuts, screws, &c. at 40*l.* 15s. The foundation of each of the three piers cost 620*l.* up to the top of the masonry, where the iron work commences. The cast-iron was all imported into Switzerland, from Pfoxthin, in Germany; the wrought iron from Belgium; and the angle iron was obtained from England.

The excursion train, which was the first that crossed the bridge, consisting of two locomotives (the one called "The St. Gall, and the other, "The Appenzelle"), and twenty-five carriages each 30 feet long, and filled with guests, invited to be present at the ceremony, passed over the bridge three times, and remained on it for a long time, so that there was a very good opportunity of seeing how the bridge behaved. It only sank two lines when loaded with a weight of 227 lbs. to the square foot, and a rod firmly attached to the bridge, with a fine division marked upon it, being carefully observed by a theodolite during the passage of the train, showed that the bridge underwent no oscillation or lateral movement, as the division of the rod coincided with the cross hairs of the instrument, without any deviation, while the train was passing over it, precisely the same as when the bridge was unloaded. Before witnessing these experiments, it was thought that it would have been a good precaution to have made the bridge for a double line of way, so as to have given a greater guarantee against lateral motion; but, from the above experiments, it appears evident that the bridge is abundantly strong for all purposes to which it will be applied, as it showed no signs of weakness although loaded by two locomotives, and an unusually heavy train, while the sounds of

music, the firing of cannon, and the shouts of the assembled thousands, although rending the air, and throwing everything around into vibration, had no perceptible effect upon the viaduct.

The iron work of this bridge is made exceedingly light, having many interstices and open spaces left on every side, so that the beautiful scenery of the neighbourhood, and the distant mountains of Appenzell, almost always covered with wreaths of snow, may be seen through them to great advantage: and thus the new railway viaduct, instead of interfering with the beauty of the scenery, adds an additional charm to it, and is admirably in keeping with the weather-beaten rocky heights, surmounted with feathering firs, that flank the ravine on either side.

This railway, which joins the line from Zurich at Winterthur, forms a principal part of the important network of railways with which Switzerland will soon be covered, especially when it is continued on the other side of St. Gall as far as Rorschach, on the banks of the Lake of Constance, where it will form a junction with the South-Eastern Railway of Switzerland, which runs through the Rhine Valley, and is nearly finished as far as Chur, or Coire, the capital of the Grisons; and in the event of the peace lasting long enough, this latter line will be continued through the Luckmania, and so into Italy.

The portion of the line, however, between St. Gall and Rorschach, is fraught with many difficulties, the principal of which is the steepness of the gradients; for as the line has to rise nearly 1,000 feet in a distance of about eight miles, the gradients will hardly be anywhere much better than 1 in 40: add to this, the bad quality of the ground, which is exceedingly sidelong, and, from its nature, constantly subject to slips. Then, again, the cross valleys necessitate the construction of expensive works of skill, among which may be mentioned the stone viaduct of Goldach. The various difficulties and obstacles have now, however, been all, in a measure, overcome or removed by the indefatigable zeal and talent of the engineer; and this part of the line will be opened for passenger traffic in a very few months.

The accompanying drawings will serve to complete the necessarily short and imperfect description of this interesting railway, and the points which form so prominent and pleasing a feature in its construction.

THE ARCHITECTURAL ROOM; ROYAL ACADEMY.

ANXIOUSLY as we have aided the establishment of "The Architectural Exhibition," in Suffolk-street,—the provision of ample space for setting forth annually by plans and sections, as well as views, the works of English architects, we must continue to express a hope that Architecture may not be altogether unrepresented in the annual Exhibition of the Royal Academy. Attention is there gained for it from persons who at present, at any rate, will not travel after it, and in other respects the maintenance of its conjunction with the other fine arts is most desirable. In the present exhibition there are but few really architectural works,—between eighty and ninety; but considering the large number of drawings which were gathered together in Suffolk-street on the last occasion, we ought perhaps scarcely to express surprise. None of the Academician architects exhibit, but two of the associates, Mr. Sydney Smirke and Mr. Scott, do; the former sending two sections of the new reading-room at the British Museum, one showing it finished, the other showing its construction (1115); and the latter an isometrical view of Exeter College, Oxford, setting forth the contemplated new chapel and other buildings (1094); and a view of a new church about to be erected at Haley-hill, Halifax (1107), of the Geometrical, or Early Decorated period, and with a noble tower. The buildings for Exeter College are in the same style: the chapel has a polygonal east end, and a *flèche* springing out of the top of the roof at a short distance from it, after the *Saintes Chapelles* of France. Mr. Smirke's new reading-room, we have already illustrated and described. It is constructed wholly of iron and brick, lined with the fibrous material of which we spoke some time ago, intended to receive painted decorations, and sculpture to a considerable extent was to be introduced at the spring of the dome. We are glad to hear that the trustees have agreed to recommend the expenditure, at once, of the sum of 5,000*l.* on the painted decorations of the room, and we hope the architect will be allowed to introduce the best art that can be obtained,—not merely what will "do," but the best that can be had. The most elaborate and admirable drawing in the exhibition, or rather series of drawings, is (1154), "The Courts on the South Side of the Crystal Palace, Sydenham," by M. D. Wyatt, from whose designs, as all our readers know, they were erected. The amount of labour and thought expended on this work is scarcely realized by ordinary observers. Mr. E. Falkener has some elegant Pompeian Studies (1121, 1122); and Mr. F. P. Cockerell several very beautiful drawings of buildings in Rome and Venice, especially (1140) a study in the latter city. Amongst the drawings of buildings already illustrated in our pages, are (1118) Castle Cary Market-house, by F. D. Penrose; (1142) the Birmingham and Midland Institute, by E. M. Barry; (1146) the Music-hall in Covent-garden, by W. F. Hill; (1175) Bylaugh Hall, Norfolk, by Messrs. Banks and Barry, and some others. The last-named architects exhibit also a view of the new hall intended to be built in the rear of the Milton Club, Ludgate-hill, for which their designs were selected, it will be remembered, in a limited competition. It has an aspect of flatness, and will depend greatly for its effect on the decorations introduced. Mr. E. Barry adds a view (1080) of St. Saviour's Church, Haverstock-hill, wherein colour will be used to some extent. An increasing tendency to this is observable throughout.

No. 1061 is a design, by H. R. Newton, for forming a new roadway into St. James's-park, by taking away the ground on each side of the Duke of York's column: this would be a dangerous experiment not advisable. A way into the park at Spring-gardens, added to the road by the German Chapel, would answer every purpose. 1063, the Schools erected at Gold's-hill, West Bromwich, by S. W. Daukes, with their gablets, involves the question of water-pipes, raised by us some time ago;—a dozen pipes are shown: and this is further illustrated in (1083) Design for the proposed Town-hall, Rugby, by C. L. Eastlake, where five down-pipes are shown on the front, and two more would seem to be necessary. 1071 is the design for an iron church, by W. Slater, referred to in our recent notice of the Ecclesiological Society: this is placed so far out of sight, that we can form no opinion upon it. 1075, proposed interior of a new building on Cornhill for a commercial firm, by Messrs. Barnett and Birch, shows columns, arches, and coffered ceilings. A well-coloured drawing (1076) shows the interior of the new parish church of St. John the Baptist, at Bedminster, by J. Norton, with the sculptured reredos at the east end, which excited so much ill-feeling. The church is very creditable to the architect. 1081, the Branch Bank of England, at Hull, by P. C. Hardwick, is scarcely worth exhibiting; but in 1136, views of Addington Park, Bucks, the architect gives us something to praise: the style adopted is the later Gothic of France. 1134, new Assize Courts now erecting at Taunton, by W. B. Moffatt, does not speak its purpose, at least in the view here given. Made up of an assemblage of small parts, Domestic Gothic in style, we should have guessed its appropriation several times before we arrived at Assize Courts. 1145, St. Mary's Church, Martham, Norfolk, now in course of rebuilding, by P. Boyce, has one of the fine hammer-beam roofs for which the county is celebrated. In the City Bank now erecting in Threadneedle-street, at the corner of Finch-lane, set forth in 1148, by Messrs. Moseley, the circular arch of the entrance doorway in the circular corner has an effect which is not altogether agreeable. In 1155 and 1165 are set forth the mansion now erecting for Baron James de Rothschild at Ferrières, in France, by Sir Joseph Paxton. It is a very large and important structure, in arrangement something like the residence at Mentmore, erected by Sir Joseph, and exhibited some time ago, and has square towers at the angles. It is Italian in style, and has a rectangular porch, in the adornment of which sculpture is introduced to a considerable extent. 1171 gives a view of the schools and residence now erecting at Ferryside, Carmarthenshire, by R. K. Penson; and the same architect exhibits a view of Dynevor Castle, in the same county, where he has made some effective alterations. In 1173, the Inlet Tower for the water works now in the course of construction by the Government of India, for the supply of Bombay, Mr. Conybeare has adopted for the octagonal lantern and balcony at its summit, the Indian variety of pointed architecture, to show the applicability of it for structures of cast iron. Of Mr. Conybeare's elaborate report on the supply of water to Bombay we have already spoken. The design by P. Bremner (1177), for alterations at Branksea Castle, Dorset, the seat of Colonel Waugh (who was recently mentioned by us), shows a wilder luxuriance of gargoyles, bosses, statues, and stone lions, than we are in the habit of achieving, and will bear taming down. Amongst the good drawings may be mentioned 1057, the Upper Cloisters of a Convent at Valladolid, Spain, by T. R. Macquoid; and 1093, the Church of the Annunziata, Genoa, by A. W. Blomfield.

METROPOLITAN FIRES AND METROPOLITAN WATER SUPPLY.

THE remarks on "*Fires; the best Means of preventing them and arresting them*," by Mr. Braidwood, published in these pages last week, are valuable and worthy of attention. There are many "flagrant cases" of faulty construction, and more cases of gross negligence in the use of fires and lights generally. Numerous as fires are, the only wonder is that they are not more numerous: take the case of house-construction. Do not working men of all trades smoke and use "*lucifers*" for lighting their pipes—said lucifers being thrown down at random? Do not some carpenters and joiners work knee-deep in shavings, with wood fires on the hearth, naked candles on the bench, and a naked pipe in their mouths? Do not house-painters use oil and turpentine regularly with waste cloth, cotton, or hemp, occasionally to wipe up stains; or, with the turpentine, to clean the work to be finished, throwing these down carelessly? Are not lucifers used in the kitchen, in the parlour, in the office, and in the warehouse? Do not masters and servants leave open boxes of lucifers about in improper places, scatter them carelessly in drawers, on counters, or on the floor? Now it should be remembered that the nibbling of a mouse, the friction of a shoe, or of a moving door, or of a drawer, or even the shaking, or falling, or crushing of a box containing lucifers, will ignite the matches, and a fire may be the consequence. The inference is, lucifer matches are not used with sufficient care: they should not be given to servants without due caution as to their use: they should not be allowed to lie exposed on shelves, on tables, on floors, or in drawers; and should only be kept in tin boxes. Individual care is absolutely necessary.

As to the metropolitan water supply, water may be abundant; but for fire-extinguishing purposes, it is not available without the intervention of fire-engines: there is the pressure in the mains, but it is not active, by reason of the pipes not being properly graduated, and the "head" being too distant. Again, only a short time since, there was not one improved fire-cock or hydrant on any of the mains within the bills of mortality: the old fire-plug was alone in use. Government have insisted on the companies carrying out many and valuable improvements in the mode of water-supply. The river water is taken above metropolitan sewage contamination: the water is filtered; and open reservoirs are abolished. The supply is to be constant, and at "high-pressure." But not one word as to *active* pressure and improved fire-cocks. In this respect there will be no change: rude wooden plugs will be driven into open pipe-ends, and 150 feet head will be absorbed by friction, so that 10 feet head is not

available. In many northern towns water will rise, in a jet, from the surface of any street, 90, 100, and even 150 feet vertical, in volume and force equal to many hand-fire engines. Large buildings and much valuable property have been saved in Manchester by the use of water so available and so applied. The water-mains throughout the metropolis may be made as useful as the water-mains are in Manchester. Improved hydrants, or fire-cocks, may be applied so as to supersede the clumsy and unscientific plug. The only difficulty is—lack of will and the money. Rent enough is paid by the consumer to demand the additional advantage and protection.

Over the whole of the metropolis, pumps are still in use. Many of these are resorted to for street and road watering: this is simply a barbarism and gross waste. A watering-cart stands idle whilst a man pumps, say, 250 gallons of water. This process may occupy fifteen minutes. Now, by hose and hydrant, from an active water-main, such a cart may be filled in thirty seconds. More than half the time of man and horse is consumed in return journeys: as much ground is traversed empty as full: with hydrants and a movable stand-pipe there need not be one yard in length of journey wasted, as a water-cart may be re-filled by the driver in less than five minutes at any point. One watering-cart, working under such a system, is equal to three working from pumps. The cost of each thousand gallons of water should not be more than sixpence. The roads in Hyde-park are watered from pumps: there can be no doubt as to this pump plan being more costly and more inconvenient. The old fire-plugs are a disgrace to the companies: for use in case of fire, for use in street-watering, and for general use, the pressure in the water-mains should be made active; proper hydrants should be fixed at short intervals, and all modern facilities for the use of water should be rendered available.

PROVINCIAL NEWS.

Peterborough.—The first stone of a training institution for schoolmasters was laid here on Wednesday in last week. The site was given by the Bishop of Peterborough, and consists of about an acre of ground on the north side of the cathedral, called Tout-hill-close.

Chelmsford.—The directors of the new Corn Exchange Company met on Friday in last week, to consider the tenders for the erection of the new corn exchange, and buildings connected therewith. Five tenders were received:—

	£	s.	d.
Messrs. G. Mansfield and Son, London	6,450	0	0
Mr. Jas. Brown, Bocking	6,200	0	0
Messrs. J. Little and Son, London	5,738	0	0
Mr. Wm. Hill, London	5,697	0	0
Mr. S. Simpson, Ipswich	4,923	3	9

The lowest tender was accepted. It includes the expense of taking out the quantities for parties tendering, and 100*l.* for any extras that may occur. The contractor guarantees, under a heavy penalty, to complete the building by the 1st of the ensuing October.

Leicester. — The tender of Mr. Broadbent, builder, for the erection of the new corn exchange here has been accepted. His offer was to construct the new exchange over the present market-house for 1,559*l.* to be finished externally, either in Portland cement, or in red brick. The architect, Mr. Ordish, decided that red brick should be used. The other tenders were,—Messrs. Stirk and Mayne, 1,655*l.*; Mr. Rushin, 1,929*l.* with 40*l.* additional, if a cast-iron roof were required. Another tender was lodged after the time specified, but not entertained. The requisite amount has been secured.

Oxford.—We understand, says the local *Herald*, that Mr. Faulkner's suggestion for public fountains as memorials of the peace has met with so much encouragement, that a public subscription has been originated, to which the Mayor has promised 10*l.* 10s. and other gentlemen donations also. The matter was to be considered by the commissioners on Wednesday.

Worcester.—The erection of St. Peter's Infant School here is forthwith to be commenced. The site is one between the parochial schools in Frog-lane and St. Peter's Church, and the southern front will face the northern side of the Porcelain Works. The new building will be 75 feet long by 23 wide, and of brick, with stone dressings, and chiefly Broseley tiles. It will be chiefly lighted from the front. The interior will be divided so as to give a class-room at one end and an entrance-hall and cloak-room at the other; whilst the central portion, to the length of 48 feet, by the whole internal width, will be appropriated as the school-room. The height from the floor to the wall-plate is to be 11 feet, the roof open to the ridge, and the timbers framed and stained so as to be ornamental. The front elevation contains five windows, the central three lighting the large room, and the others the smaller. The plainness of the front will be relieved by a gable at the centre, and the ridge of the roof over the class-rooms will be lower than that over the main building. The builder was Mr. George Hunt, of Evesham.

Dudley.—At the last weekly meeting of the local guardians, Mr. Lovatt, of the firm of Messrs. Bidlake and Lovatt, the architects of the proposed new workhouse, was in attendance, and a report frrm the building committee was read, announcing that thirteen tenders had been received for building the new workhouse and school. The amounts of the respective tenders were read; these were as follow. The first of the three amounts is for the workhouse alone; the second for the school; and the third for the two buildings:—

	£	s.	d.	£	s.	d.	£	s.	d.
No. 1	14,625	0	0	3,250	0	0	17,875	0	0
„ 2	13,503	0	0	2,770	0	0	16,273	0	0
„ 3	12,703	6	0	2,528	3	0	15,231	9	0
„ 4	12,460	1	0	2,673	7	8	15,134	8	8
„ 5	12,295	0	0	2,700	0	0	14,995	0	0
„ 6	12,415	0	0	2,505	0	0	14,920	0	0
„ 7	12,323	19	7	2,556	10	5	14,880	10	0
„ 8	12,286	10	0	2,479	0	0	14,775	10	0
„ 9	11,918	17	11	2,570	7	1	14,489	5	0
„ 10	11,664	0	0	2,683	0	0	14,347	0	0
„ 11	11,441	0	0	2,553	11	6	13,994	11	6
„ 12	11,457	13	4	2,460	5	8	13,917	19	0
„ 13	11,520	0	0	2,314	0	0	13,834	0	0

The report stated that, so far as was known, the tenders were much more satisfactory than on the former occasion. It was resolved, said the report, that the seven tenders lowest in amount should be laid before the Board for consideration. The names of the last seven tenderers were given as follow:—No. 7, Mr. John Elliott, Wolverhampton; No. 8, Mr. J. S. Ferguson, Nottingham; No. 9, Mr. John Parnell, Rugby; No. 10, Messrs. Nelson and Co. Dudley; No. 11, Messrs. J. and G. Lilley, Measham; No. 12, Messrs. Trow and Son, Wednesbury; and No. 13, Mr. Charles Burkett, Wolverhampton. The subject was referred back to the committee. An entry on the minutes, expressing the satisfaction of the Board with the tenders, was agreed to. Mr. Lovett mentioned that the tenders would have been nearer still to the estimate had there not been the addition of a dining-room, costing 700*l.* or 800*l.*

Pembroke Dockyard.—The works now in progress at Pembroke Dockyard are expected to occupy two years in construction, as they embrace very extensive alterations and improvements. The fortifications at Dale Point, on the northern side of the haven, are proceeding, and, when completed, will form an important adjunct to the forts on Thorn Island and the Stack.

Warrington.—At the last quarterly meeting of the town council, it was stated, according to the *Manchester Courier*, that the museum committee estimated the cost of the present building, including plastering and heating apparatus, at 1,600*l.* leaving a margin of 400*l.* which would enable them to erect a curator's house in the north-east angle of the building. The plans so far acted upon had been drawn with the ultimate design of completing the building with a lecture-room, over which might be erected accommodation for the school of art, in case arrangements might be made with the committee of that institution for the purpose. The street-improvement committee reported that a shop at the bottom of Bridge-street and corner of Mersey-street, had been purchased for 300*l.* in order to widen Mersey-street. The general purposes committee reported that Mr. Coxon, the borough surveyor, had submitted a sketch of the kind of baths which he considered necessary for Warrington. He estimated the cost, exclusive of the site, at about 2,000*l.* and recommended Crown-street or Oxford-street as the most eligible site. A discussion ensued, and it was ultimately agreed that the baths in Church-street should be purchased. Mr. Litherland's tender for drainage, Messrs. Pennington's for walling, and Mr. Ladd's for erecting lodges, had been accepted.

South Shields.—At the South Shields Town Council meeting held on Wednesday in last week, the borough surveyor, Mr. Thompson, presented and explained the plan of the drainage for the Waterloo Vale and Central district. This work, according to the local *Gazette*, will be commenced shortly: the plan will be at once submitted for approval to the Central Commission. This large plan shows a system of drainage, extending from and including the Ogle Estate, to the Mill Dam as the main outlet. It accommodates Thames-street, and all streets and lanes of North-street, and the whole of Waterloo Vale, extending to Mount-terrace, as well as a portion of the densely populated part of the borough above the Mill Dam.

Dundee.—St. John's Church of Scotland schools, at Hawkhill, were opened on Friday in week before last. The building is capable of accommodating nearly 200 pupils (boys and girls), according to the Government rule. The site is central, and was acquired for an annual feu duty of 10*l.* commuted into a cash payment of 115*l.* and a 5*l.* feu duty, which is estimated at the value of twenty years' purchase. The General Kirk Session of Dundee defrayed the cost of the site.

Elgin.—A contract entered into with Mr. D. Morrison, for laying the High-street with square stone blocks, from the Court-house to the School-wynd, is now completed. There are now about a thousand yards of the street finished in this style,—the last 500 yards of which is laid down by the present contractor at an expense of 500*l.* The blocks of stone used, says the *Forres Gazette*, are of the hardest material from Spynie Quarry. They measure from 12 to 16 inches long, and 5 to 6 inches broad, and 9 inches deep. The causeway appears to answer the intended purpose. To have this improvement carried westward along the whole of the High-street is considered desirable. Elgin was long noted for its ancient highway, rising archedly towards "the crown of the causeway," where the high-minded folks were said to walk in a very exalted mood of mind: modern improvements, we suppose, are likely to modify this ancient state of things considerably.

VIEW OF THE LOUVRE, PARIS.

In illustration of the particulars given in our pages from time to time of the works which have been going on at the palace of the Louvre, we add a second view of that building, showing the new parts, with their rich adornment of sculpture, from the hands of many of the principal sculptors of France.*

DRAUGHTS IN CHURCHES.

May I ask some of your readers to give me a receipt for making a draughty church comfortable. A church has been built at Torquay, Devon, very lofty, with open roof, and in the winter it is impossible for the invalids who frequent the town to attend, from the cold draughts passing from the roof, and in summer the church is equally oppressive from want of ventilation, and the heat caused by the sun upon the slates. To remedy these evils the architect, I hear, has suggested felt between the boards and slates, but there is a dispute as to whether felt will be sufficient. Many persons wish for a false roof twelve feet below the present one, as they state the cold draughts are caused not by the cold air coming through the slates into the church, but by the hot air rushing to the roof and driving the cold air down into the church. Now can your readers assist *us* from their experience? It will be a real work of charity, as we suffer very much in the winter; and, by the advice of those who have also suffered and remedied the evil, we may obtain some suggestion that will do good service to the public, and especially to my fellow sufferers and myself. An Invalid.

* See p. 1, *ante*, and elsewhere On p. 137 will be found references to various notices of buildings in Paris in our previous volume.

THE ADDITIONS TO THE PALACE OF THE LOUVRE, PARIS.

PROGRESS IN DESIGN AS APPLIED TO MANUFACTURES.*

FICTILE MANUFACTURES.

IN no department of British industry has the value of a gradual introduction of improved modes of decoration been more clearly proved than in that of porcelain and ordinary earthenware. To any one who, like the writer of this paper, visited the Staffordshire Potteries nineteen years ago, and observed the state of things at that time, and has had the privilege of an occasional visit, at stated intervals, during the period which has intervened, it must be very obvious that a change, such as we frequently hear pronounced as impossible in other industries, has come over nearly the whole of the productions of that district. Far from resting satisfied, however, with even the present state of things, it is quite clear that every coming year will tend to still greater progress than that already realised, and that those who pertinaciously persist in the common fallacy that to do as they have done is all-sufficient, will be left behind in the race.

The illustration of the fictile manufactures of Staffordshire in the Paris Exhibition was of such a character as to prove most unmistakeably that a great improvement had taken place since 1851; and, without being prepared to approve, on artistic grounds, all that has been done, yet, with the experience of the past upon our memory, it would be unjust not to award the credit due to intelligent effort and steady enterprise. To two houses, that of Messrs. Minton and Co. and Messrs. Copeland, the credit of the earlier movements is due; but others have followed, who, applying a better style of art to less exceptional articles than those produced by these two firms, have certainly aided in no slight degree the more recent improvements; and it is quite evident that, at the present time, whatever fault may still be found with the subjects employed for the purpose of decorating the cheaper ware, yet that the character of the art employed is much higher than formerly. In the blue transfer ware, for instance, there is a decided tendency to mosaic forms, less attempt at projection in light and shadow, and although the details are often more architectural than fictile, yet the result is felt to be more suited alike to the use of the article, the surface decorated, and the method of ornamentation.

In these forms, too, one can trace the influence of the merest elementary outlines in use in our schools of art, of which that established in the Potteries eight years ago has been one of the most practically useful.

In the cheaper kinds of porcelain, neatness approaching severity is gradually taking the place of the blotchy floral designs which formerly disfigured forms which ought to have suggested more tasteful decorations. Nor have the forms themselves been neglected, since in many articles of every-day use, a purity of outline formerly unknown has taken the place of the eccentric convolutions which bid defiance to common sense and the ordinary rules of proportion.

Into the higher class of porcelain painting an artistic refinement has been introduced which contrasts in a remarkable manner with the hard, wiry, and laboured results of some twelve or fifteen years ago. One feels that the workman is more of an artist, and yet not the less of an artisan than formerly.

It may be reasonably asked, to what cause is this change to be attributed? and it may be replied that at one period matters were really so bad that a change was inevitable in order to retain the trade in the higher branches, and there can be no doubt that the efforts after improvement in this direction led to corresponding efforts in the production of less costly articles. The introduction of Parian, however, would appear to have given the first impulse towards a higher style of art. The enterprise which prompted the employment of artistic talent in the production of statuettes, either original or as reductions from celebrated works, modern and antique, was soon engaged in the improvement of analogous branches of fictile art. The key-note was struck in Parian, but the theme has been carried out, step by step, in other materials and modes of application, such as tiles, vases, garden decorations, and domestic services.

Recently the efforts to emulate the productions of Palissy, and rival the Majolica of the best periods, have been attended with so much success, that he must be a hyper-critic indeed who would not join in a congratulatory compliment to the skill which had solved the problem of modern progress in British fictile art so successfully.

In thus endeavouring to do justice to the progress made in the Staffordshire Potteries, the productions of Worcester must not be forgotten. In 1845, a first visit to this city showed the writer how much in arrear its porcelain manufacture then stood, even as compared with that of Staffordshire. Since that period a marked improvement has taken place, and "the faithful city" bids fair to resume its old position, and even excel it, in the manufacture of the higher class of porcelain. Here, again, the influence of reproductions in imitation of past modes of decoration has had its influence, and the imitation of Etruscan methods in the manufactory of Messrs. Kerr and Binns, followed as this has been by the successful production of admirable specimens, which go far towards rivalling the best class of Limoges ware, cannot fail to influence other departments, and stimulate to corresponding improvements. Good work of any kind always has this healthy influence, that it renders the mind impatient of that which is less perfect, and thus imperceptibly necessitates progress. In this fact lies the value of bringing fine works of art of every kind before the people. The mind once imbued with a true sense of the beautiful, detects at a glance any anachronism in form or colour, although the "why and wherefore" of the defect may not be so readily discovered. This can alone come of sound education and a knowledge of principles.

Let it not be supposed, however, that all recent progress in fictile art is confined to reproductions and imitations of antique types or methods. During a visit, the other day, to the Staffordshire Potteries, two new modes of decoration presented themselves. Of one of these specimens are forthcoming. This consists of an inlaid coloured body upon Parian, and seems admirably calculated, from its conditions, to necessitate severity in ornamentation. The process has been so far worked out by Messrs. Rickuss and Toft, and is of an economical character. Of the other process, now in the course of development by Messrs. Pratt, no specimen has, unfortunately, been forwarded, owing, as it would appear, to the proprietors not being at present prepared to bring it before the public. Some admirable things, however, are in progress, and, judging from a complete specimen, the results appear likely to be of a very satisfactory character. The process consists of enamelling upon terra-cotta, the outline of the ornament being printed by transfer, and the colours afterwards put in with a brush.

METALLIC MANUFACTURES.

In the wide and constantly extending field of the fancy metal trades of Great Britain, the opportunity for progress in design is so great, that, with much to regret and find fault with, there is also much which cannot fail to satisfy and encourage all who take an interest in the application of art to industry. Perhaps the greatest revolution in the higher departments of design, especially as applied to gold and silver, has arisen out of the great modern discovery in science of the deposition of metals by galvanic action. The opportunity thus afforded for copying or reproducing, at a comparatively reasonable cost, the fine works of past times, has tended to educate the taste of the people, and lift us to a higher plane of judgment in modern productions. Thus, the test by mere material value in bullion weight, which had usurped the place of the esthetic value conferred by art, has been gradually giving way, and the importance of the latter is gradually becoming more and more recognised. This is seen in the character of the works now usually produced for testimonial services and for racing prizes. It is useless to say that these are not always appropriate,—often, indeed, exceedingly inappropriate,—but as an evidence that a desire for something more than a given number of ounces of gold and silver is giving way to some consideration of the form in which the metal comes, they are evidence of progress.

Again, let any person whose recollections of the displays made by our gold and silver plate manufacturers date some fifteen or twenty years, compare the character of the productions then exhibited in show-rooms with that of some of the leading houses now, and then consider the change. In the show-rooms of Messrs. Elkington, Mason, and Co. of Birmingham, there are at the present time ten times more works, in which appropriateness and purity of design, in connection with excellence of art-workmanship, is displayed, than could have been produced, twenty years ago, by all the houses in England put together.

The progress made in the manufacture of church plate and general metal work for ecclesiastical purposes, as indeed in all matters connected with church ornaments, is well known to all who take an interest in the progress of the arts of design. The manufactories of Messrs. Hardman, of Birmingham, Skidmore, of Coventry, and others, have produced works from time to time, within the last few years, which would have done credit to any country and any age, if the fact is taken into account that the question of cost was a serious element in their manufacture. And here it may be permitted to say a word about the influence which one mind alone undoubtedly exercised, not only on the particular department of art to which he specially devoted his attention, but, indeed, upon all of a kindred character, in which other minds were engaged who could appreciate his arguments, and apply the principles he enunciated. For however much we may differ in many points from the late Mr. Pugin, as to his special views of the mission of art, and the application of modern scientific and mechanical means to the reproduction of works of excellence, his earnest and fearless denunciation of all "shams,"—his exposure of false systems of ornamentation—his thoroughly zealous working out, "in season and out of season," of his own views in his own way, must ever command the respect of every true and earnest lover of art, since it is to the influence of his example, in one direction, that we owe so much of the progress to be recorded in other departments of art-manufacture. It is therefore but an act of justice to his memory, which all who differed from him on special points can at least afford to perform—to fairly and honestly acknowledge how much he did in his comparatively limited time for the domestic and manufacturing arts of his country, both directly and indirectly.

That an enormous amount of work is still thrown away upon comparatively very indifferent designs in gold and silver is quite true. That the human figures and animals are pressed into service, rightly or wrongly, and that these are often wonderful examples of the ignorance of their producers, is also true. That ornamental types, originally designed for any material but metal, are introduced without the slightest consideration as to fitness, is a fact which is patent to all who interest themselves in this question; yet, with all these drawbacks, and many more not so easy to enumerate, it is affirmed that much has been done during the past few years for designs as applied to gold and silver plate and its imitations.

In brass and bronze work the same may be said; for, notwithstanding the ultra-naturalesque character of many productions still in the market, and likely still to "sell," an approximation has been made towards a much purer style, and this, too, since the Great Exhibition of 1851. It must never be forgotten that much of the over-ornate tendency, so visible in the ornamental brass manufactures of Birmingham, arose from a slavish and unmeaning following of the French, especially after the Exposition of 1844. It is satisfactory to know, however, that the present tendency has not its origin in this direction, and that in the brass and bronze chandeliers, gas brackets, and works of an analogous character, efforts are now being made, and some of them very successful ones, too, to work out a more severe style of treatment as applied to those useful articles; and, whilst giving less weight of metal and more hand-

* From a Paper by Mr. Geo. Wallis, read at the Society of Arts.

work, to produce tasteful results by a little more brain work at the outset. In fact, manufacturers are beginning to acknowledge that artistic talent, carefully directed to practical ends, will *pay* when it secures simplicity and elegance in design. Nor is this applied so much to the costly articles as to those coming within the means of persons of moderate income. In short, the construction required by the use appears to be first considered in the specimens alluded to, and then the ornamentation is carefully adapted to the embellishment of the necessitated form. This, we apprehend, is sound practice, based upon sound principles. Under any circumstances, the results are satisfactory, so far as manufacture goes; and that the articles will make their way in the market in due time, it would be as unreasonable to doubt as it would be to doubt the influence of light upon darkness.

In iron castings, especially those suited to the furnishing of entrance-halls and garden decorations, to quote the display of the Coalbrookdale Company in the Paris Exhibition will be quite sufficient as an indication of progress in this direction; for, without absolutely declaring that everything manufactured by this firm is perfection, one cannot hesitate to acknowledge that the improvement, even since 1851, must be visible to the most careless observer.

In connection with this part of our subject, the remarkable strides in design as applied to the Sheffield manufacture of stoves, grate-fronts, &c. must be noticed. It will be remembered how thoroughly well Sheffield maintained its position in the Great Exhibition of 1851. Since that time great progress has been made, and, although this was not illustrated to its full extent at Paris, it is not the less a fact. It is not the less gratifying, too, to know that here, at least, the influence of the instruction given in the School of Art has been acknowledged, and that those who availed themselves of its teachings have sought to do it honour.

CHURCH BUILDING NEWS.

Romford.—The new Roman Catholic chapel, built at the expense of Lord Petre, at Laurie Town, Romford, was opened on Tuesday in last week, by Cardinal Wiseman. Mr. Nichols was the architect. The edifice is in the Early English style. The walls are of rag-stone facings, with Caen dressings, and the roof is tiled. The length of the body of the building is 65 feet, the width, 23; the sanctuary, 12 feet by 16: there is a porch on the south side, 13 feet 6 in. square. The height is 30 feet. The roof is open with diagonal braces, and diagonal boarding stained light and dark oak. In the centre is a bell turret, with cupola, braced on the roof, rising above it to the height of 16 feet, and with one bell. At present the building will seat 200, but provision has been made for the erection of a gallery to hold 50 more. The cost of erecting the chapel was 1,800*l.* and the total outlay about 2,000*l.* The builder was Mr. Hammond, of Warley. In the interior, the body of the chapel is occupied with a double row of low benches, stained to imitate oak, and the passage between them is paved with Minton tiles. The chapel is dedicated to St. Edward. Mrs. Clifford has presented a stained window to be placed above the altar, and also a rose window at the east end of the chapel. To the right and left of the entrance to the sanctuary are figures of the Virgin and Child and of St. Joseph.

Lacock.—The foundation stone of a new church was laid in this parish, on 26th ult. The church is being built at the expense of Captain Gladstone, M.P. at a cost of about 1,600*l.* and will contain 150 sittings. The foundation stone was laid by Mrs. Gladstone. The building will be in the Early English style, from designs furnished by Mr. Gabriel, of London, architect. The builder is Mr. B. Mullings, of Devizes. The church is dedicated to St. Ann.

Fisherton (Salisbury).—The consecration of Fisherton Cemetery took place on Thursday, in week before last. According to the *Wilts Mirror*, the cemetery is situated in the parish of Bemerton, nearly a mile beyond the county gaol, on the Devizes road, and is about two and a half acres in extent. The spot is a very elevated one. The entrance is from the Devizes road, through a gateway of Early English architecture, having a tower on the north side, in which is a small room for the porter, with other conveniences. The effect of this entrance, says the *Mirror*, is by no means picturesque; and it is said to be contemplated by the Burial Board to remove it, and erect a kind of lodge. The ground appropriated to members of the Established Church is on the south side, and is divided from the Dissenters' portion by a sunken fence. The chapel is in the Decorated style, and is about 27 feet long and 17 feet wide. It has a porch on the north side, a chancel, a side aisle on the south side, and a bell on the gable end. The exterior is faced with flints, with Bath stone quoins and windows. The roof is open, the seats are of wainscot, and the floor of the building is laid with tiles, some of which are glazed. The chapel upon the unconsecrated portion of the ground is situated on the north side, and is in the Perpendicular style, and about 21 feet in length and 14 feet in width. It has a bell-turret surmounted with a vane, and the exterior, like that of the Episcopal Chapel, is faced with flints, with stone quoins and windows. The roof is framed and panelled, and the paving is decorated with encaustic tiles. The architect was Mr. John Turner, and the builders were Messrs. Gover, of Winchester. Mr. John Harding has officiated as clerk of the works.

Dorchester.—The new cemetery extras, over and above the originally supposed cost, will be 600*l.* and at meetings held in the vestry-rooms of the parishes of Peter's, Trinity, and All Saints, to obtain the consent of the ratepayers to a further levy of rates, to cover that sum, the proposition was unanimously carried. Trinity parish contributes 264*l.* 8s. 10d.; St. Peter's parish, 195*l.*; and All Saints' parish, 140*l.* 11s. 2d. The whole costs attendant on the cemetery, including consecration, and two years' salary of the clerk to the board, printing, &c. were 3,800*l.*

Sherborne.—In St. Mary's Church an improvement will shortly be made, through the instrumentality of the rector, the Rev. Talbot Greaves, by the construction of a tower with peal of bells. The tower will be built at the end of the edifice overlooking St. Mary-street. Upwards of 600*l.* according to the local *Journal*, have already been voluntarily offered by the gentry and inhabitants of the town towards defraying the expense.

Chalford Lynch.—The corner-stone of a new church which is being erected at Chalford Lynch, in the parish of Bisley, was laid on Thursday, in week before last. The land was given by a chaplain at present at Scutari, and the principal part of the funds by an unknown individual. It is intended as a chapel of ease to the mother church at Bisley, and is being erected in the Decorative style of the thirteenth century, with accommodation for 287 persons, principally free. Mr. G. F. Bodley, of Brighton, is the architect. Messrs. Wall and Hook are contractors for the masonry; and Mr. Restall, of Oakridge, for the carpentry.

Marston (Ross).—On the 11th ult. the foundation-stone for the much-needed new church for the parish of Marston, near Ross, in the county of Hereford, was laid by Mr. W. Brooke. The building consists of a nave, chancel, and south porch, with a double bell-cot over the western gable, after the Decorated style of English architecture. It is from the design of Mr. T. Nicholson, of the city of Hereford, diocesan architect, and is in course of construction, under his superintendence, by Messrs. Pearson, of Ross, builders.

Shrewsbury.—The projected restoration of the Abbey Church in this town, has been brought to a standstill for want of funds. The church needs very considerable repairs and alterations—in the interior especially. Mr. Randal, the architect, has carried out the restoration, so far as the funds at his disposal would allow. Another appeal for support, according to the local *Chronicle*, will shortly be made, and we hope it may be successful.

Ilkeston.—Since the restoration of the parish church of Ilkeston, Derbyshire, the churchwardens have obtained subscriptions for transforming the hitherto Italian tower into an Early English one. This has been accomplished without taking down any part of it, with the exception of the unsightly pinnacles (erected with the tower, some seventy-six years ago), which have been replaced by new ones. The design is by Mr. T. L. Walker, late of Leicester, who left for China before the completion of the works, which have been completed by, and under the superintendence of, Messrs. Lindley and Firn, of Leicester, builders, the contractors under the same gentleman for the rebuilding and restoration of the church. No scaffolding was made use of, but no accident occurred.

Morton.—The parish church of Morton, in Derbyshire, has been entirely rebuilt within the last two years, and from time to time has received additions to its internal fittings and decorations. It is distinguished among the county churches by the quantity of stained glass with which it is enriched, and another large window has just been added, as a memorial to the late Mrs. Turbutt. The window-frame is in the geometrical style of fourteenth century, and was reserved from the old church as it existed before the late restoration: it is now filled with stained glass by Mr. Warrington. The tracery is filled with the monogram IHS, angels with thuribles in adoration, &c.; and there are three lower lights of large dimensions, of which the first contains the Saviour bearing the Cross, with a kneeling female in grief at his suffering: the central light contains the Crucifixion, the Virgin and St. John on the sides, and Mary Magdalene at the foot of the Cross: the third compartment has Mary at the feet of Jesus, after the Resurrection, illustrating the text "Touch me not," &c.; the whole three surmounted with foliage, intermingled with canopied arches, and tabernacles containing angels. The reredos beneath the window, composed of ancient carved work in oak, has been painted by Mr. Warrington.

Whetstone.—The parish church here has now been restored and repaired. The tower, originally built of pebbles and sand with very little lime, and the spire, have been taken down, restored, and rebuilt. The tower must have been in a very dangerous condition for many years, as in 1826 an attempt was made to secure it by building a stone ashlar wall and buttresses under part of the north side, at an expense of 1,400*l.* (a pretty profitable job to the builders, as remarked by the *Leicester Advertiser*, and nearly enough at the present day—using the old material—to have rebuilt the whole—tower, spire, and church). This wall only accelerated the destruction of what it was intended to sustain, and must have, ere long, brought the other parts of the fabric to the ground, as the present builders, in scaffolding for taking down the spire and tower, found the latter in a much more dangerous condition than, on examination from the ground, could have been imagined. The spire, built of Attleborough stone, has been used again, its shape being a little altered, and a lightning conductor added. The windows of the tower have been restored, and a new three-light belfry-window, new doorways and doors, with a new broken parapet and new pinnacles, cornices, strings, gargoyles, &c. &c. added. The new walls are faced with Enderby granite. The church has been thoroughly cleaned within. The chancel arch has entirely gone: the piers which formerly supported it and two rudely-carved capitals only remain. The church itself is altogether in a very dilapidated condition. A huge buttress of bricks being put up as a prop on the north side, and the soil having been thrown up to the walls, has rendered the foundations anything but secure. The whole cost of the rebuilding, cleaning, &c. together with a new stone platform and steps to the entrance-gates, will, it is expected, be under 800*l.* Messrs. Parsons and Dain, of Leicester, are the architects, and Messrs. Lindley and Firn the builders.

Alvaston.—The erection of a new church, of which Mr. Stevens is the architect, and Mr. G. Thompson the builder, has been carried on successfully, and the structure is now almost completed.

Bolton.—The Dissenters' chapel in the new cemetery will be erected by Mr. James Marsden; cost, 570*l.*; architect, Mr. Woodhouse. There

are other chapels, lodges, &c. to be contracted for.

Carlisle.—The friends of the Dean of Carlisle have resolved to place a stained-glass window in the cathedral to commemorate a series of losses recently sustained by him in his family. With this view, a meeting was held in Carlisle on the 30th ult. when a committee was appointed for the purpose of carrying out the object in view.

Armagh.—The Roman Catholic cathedral at Armagh is nearly completed. The United States have subscribed the sum of 2,302*l.* towards its erection. The amount *intended* to be spent on it is 10,700*l.*

ART AND THE REJOICINGS ON THE 29TH.

THE arrangements with which Hyde-park and the Green-park are disfigured, and have been for some weeks past, inspire us with apprehensions as to the way in which the promised "rejoicings" are to be carried out on the 29th. Some huge sheds, of surpassing ugliness, have been erected, and these are so designed, that *raking shores* on all sides are necessary to keep them up! The instructions are said to be for fireworks, "as on previous occasions," and we know what such an order as that led to in the case of the "proclamation." It would be a sufficient reply for ignoring every improvement in pyrotechny since 1814. Some say we may think ourselves very well off if we get anything so good as it was on that "previous occasion." There are many living who remember distinctly the fireworks and games, exhibited in the parks, in 1814;—the mock battle and burning of the fleets on the Serpentine, and the water rockets, which were played off with excellent effect; the Temple of Concord, in the Green-park, which was designed by Smirke, and the numerous allegorical transparencies painted by Stothard, Hilton, and other artists. Then there was the Chinese bridge, across the water in St. James's-park, with a pagoda of immense height, which at night blazed with gold and silver light, and from the towers of which fireworks of various kinds were let off with good effect. This tower accidentally took fire, and was destroyed, with loss of life.

Wonderful changes have taken place in the country since 1814: improved taste and a certain knowledge of art have spread amongst large classes: science has also produced great results. The improved scenery and costume of the stage, the displays at some of our public gardens, have assisted to make the multitude critical; and the facilities for travelling abroad have enabled many to form a comparison between the arrangement of foreign festivals and our own.

These and other considerations render it necessary that the fireworks and the general design and effect of the matters intended for the public amusement should be better in every respect than those made more than forty years ago. Comparing, however, the frightful wooden sheds to which we have alluded with the well-designed structures of good architectural proportions which were used for similar purposes on former occasions, for instance, in 1748, and the terms of the instructions given from head-quarters, we cannot help having some misgivings about the 29th. The advice and assistance of the architect and artist should be obtained by the gentlemen of the Ordnance, and something like art should be imported into the devices. It is said that large masses of troops will be brought for the purpose of review into the neighbourhood of London. Might not military music on a very great scale be made available? Handel composed warlike music expressly for a public rejoicing about a century ago.

In 1814, large galleries were erected for the accommodation of the Court and others, and a portion of St. James's-park was set apart for those who chose to pay an admission fee. This appropriation of space for exclusive purposes seems to have been adopted with some misgivings, for the Government issued various notices of their great anxiety to give every accommodation to the public.

Many persons are now seeking to know how they are to see the fireworks without difficulty; and no doubt some provision is necessary; for, without desiring the division of classes, or anything of that sort, we ought to remember that a large number of children and females, unaccustomed to great crowds, will be brought to see this sight,—for the safe accommodation of whom "Pater Familias" would willingly pay. We have heard of one, indeed, who wanted to hire a house in Park-lane for the night, and was repulsed with scorn! A gallery well placed, covered with crimson, and decked with banners, would add much to the effect; and if it were generally known that any sum paid for admission would be appropriated to the relief of the children of soldiers who have fallen in the late war, we believe that the public would be perfectly satisfied. Ample entrances to all the parks should be made.

THE CRYSTAL PALACE, SYDENHAM.

THE opening *fête* for the new season, held on the 9th, when the Queen and Prince Albert were present, and the Scutari Monument and Peace Trophy, designed by Baron Marochetti, were unveiled, passed off brilliantly, and gives promise which should lead to a large issue of season tickets. The presence of five or six hundred of our soldiers from the Crimea, who defiled before her Majesty, gave an almost national character to the meeting, and inspired the greatest enthusiasm. The Scutari Monument is erected in the Nave, on the south side of the Centre Transept; a great mistake, so far as the building is concerned, as we have already said: the Peace Trophy is on the north side; and Marochetti's two Equestrian Statues of Richard Cœur de Lion, and her Majesty Queen Victoria, stand respectively at the foot of the Monument and the Trophy. The Monument consists of a lofty obelisk on a quadrangular base, which has a winged figure at each angle, and an inscription on the face: the whole height is about 100 feet, and the general effect not unsatisfactory. We cannot say as much for the Peace Trophy: a female figure with arms outstretched, and clad in gold and silver tissues, stands on a pedestal of the ugliest possible form, coloured in the ugliest possible manner. It would do discredit to a third-rate confectioner. The rapidity with which the Monuments have been put up is very remarkable. The fountains played in the afternoon; and all the arrangements made by the Company were very excellent.

METROPOLITAN BOARD OF WORKS.

AT a Meeting of the Board held on Friday, the 9th, the following reports by the Superintending Architect were agreed to:—

1. On Mr. R. Carbine's application for consent to erect a shop on the forecourt of No. 6, Pleasant-place, Hackney.

2. On application of Mr. Geo. Legg, for consent to the erection of a bow-projection to the front of Mr. Bryan Donkin's house, Grose's-buildings, Blackheath.

3. On application of the Board of Works of Lewisham, for consent to erect a porch on the forecourt of No. 2, Grove-place, Lewisham.

4. On application of Mr. Samuel Hemming, for the approval of the construction of a temporary iron church at Highbury.

5. On application of Mr. Richard Cattarns, Secretary to the Iron Steam Boat Company, for approval of the construction of a travelling crane at Nine Elms, Vauxhall.

6. On application of Mr. James Gooch, for consent to the erection of an addition in front of No. 1, Medina Cottages, Islington.

7. On application of Mr. Joseph Thompson, for consent to the erection of a building on the forecourt of No. 8, Clarence-place, Camberwell-road.

8. On application of Mr. James Telfer, for consent to erect a shop on the forecourt of No. 9, Durham-place, Hackney-road.

9. On application of Mr. Alfred J. Hiscocks, architect, for approval of the construction of an iron building at Tyndale-house, Wimbledon Park.

10. On application of Mr. F. Bellamy, for approval of the construction of a poultry-house in the rear of No. 5, Medina-cottages, Seven Sisters-road, Islington.

11. On application of Mr. R. L. Sibley for a fee for supervising the erection of a furnace chimney-shaft.

12. On application of Mr. John Tarring, architect, for consent to the erection of a porch to Sussex-villa, Camden-hill, Kensington.

At a previous meeting, in respect of a difference between the architect of the Surrey Gardens and the District Surveyor, as to the construction of parts of the new Hall, the Board determined, with the advice of the Superintending Architect, to support the District Surveyor in his objections; and accordingly alterations were agreed upon by the architect of the building to meet these views.

COMPETITIONS.

Middlesex Industrial School.—We are glad to be able to state that at a meeting of the Committee of Magistrates for providing this school, held on Monday last, it was resolved to refer the forty-one designs sent in to three architects, not being competing parties, to select the seven plans in their opinion most suitable, to carry into execution the printed instructions issued by the Committee. The gentlemen invited to make this selection are Mr. Sydney Smirke, Mr. P. C. Hardwick, and Mr. Pownall, the County Surveyor.

Independent Chapel, Aylesbury. — We are informed that twenty-four designs were sent in, and that the one by Messrs. Poulton and Woodman was accepted: it is a Gothic design, to cost about 1,500*l.*

Norwich Workhouse.—I have just received the "Instructions to Architects," which I beg you to notice in the *Builder*, on account of one special peculiarity. They provide, by clause No. 20, for the drawings being sent, not by railway or carrier, but *by post*, prepaid; a provision which also appears in the advertisement for designs. Now the specified drawings will each require a sheet of double elephant paper, which, to go "by post," will require *folding twice*, viz. across its length and across its breadth. No drawing *can* be strained, or framed and glazed. It is evidently the intention of the guardians to get rid of the exceedingly troublesome mode that now obtains, and to confine all the competitors alike to plain unadorned sheets of paper only. The "sending in" by post, is therefore a very wise arrangement, which will save the competitors much annoyance, and enable the guardians to receive and examine all the designs in one tolerably sized room, instead of having to hire the whole of the apartments of a town mansion to see them in, as was the case with the designs for the Army and Navy Club, and more recently the plans for the Government Barracks. It will, however, be utterly unfair if the guardians do not rigidly adhere to their own rule, by positively refusing to receive any designs transmitted otherwise than by post; and I beg you to give me a corner of the *Builder*, to impress on both guardians and competitors the vast importance of *strict compliance* with this part of the instructions.

A PROBABLE COMPETITOR.

MANY THINGS.

OLD "whitewash," &c. may readily be removed from walls by scrubbing with sand and water,—the latter being previously acidulated with about ·04 of its weight of commercial hydrochloric acid. The commonest variety of the acid, to be had for 1d. or 1½d. per pound should be used for the purpose.

To your Melbourne correspondent who wishes to cool his habitation, I can only say that cold is always produced by evaporation, and that the temperature is lowered in proportion to the amount of surface exposed: the rest must be left to your correspondent's ingenuity. If he can arrange some highly porous covering for his roof, and can keep the same constantly moist (not wet) by the help of a good water supply and a few yards of small tubing perforated with fine holes throughout its entire length, I doubt not that the desired object will be satisfactorily attained.

The "porous surface" might be made in many ways: layers of hay or straw even would answer, if occasionally renewed; and I think the employment of "boiler-felt" would leave nothing to be desired: in a word, let your correspondent examine one of the "Patent Porous Butter-Coolers," lately introduced, and carry out the same principle *in extenso*.

It may perhaps be as well to mention that a cheap and efficient imitation of the above convenient, but, for the million, rather high-priced article, can be easily manufactured in the following manner:—

Take an ordinary flower-pot of the required dimensions, invert it, and stop the small hole with "Portland cement;"* then insert over it another pot (of

* One part of the cement and two of fine sand.

such size that the space left between the sides of the two shall be rather less than half an inch), and fix their rims together at the bottom with the same cement. The inside of the smaller pot must be made impervious by a coat of some resinous substance, say either a mixture of wax and resin applied in the melted state, or else some "liquid glue" (solution of ordinary "shell-lac" in "methylated spirits"), laid on with a brush. The butter-cooler is then complete. Care should be taken that the pots are quite dry before the varnish is applied to the inner one, and three days should elapse after this last operation before the cooler is used.

If it be desired to combine a cooler for wine, &c. with the preceding, a small unglazed drain-pipe may be cemented (socket-end downwards) upon the top of the butter-cooler, and the object is accomplished. The cooler is filled with water from the top through the hole left in the larger flower-pot, and should rest on a large plate, with the butter, cheese, or other edible raised slightly on a smaller one underneath the cooler itself: a bottle may then be placed in the upper part of the contrivance. Some of the coolers used at present allow the water to permeate their substance and pass to the inside: as must be sufficiently obvious, this arrangement will not.

Certain substances (for instance, cream cheese) are injured by a moist atmosphere: in such cases a little Scotch oatmeal, carefully dried, should be placed round them: this will keep the confined air perfectly dry.

In answer to "A Builder," I beg to say that a solution of soluble silica is of great service in making friable or partly-decomposed building-stones hard and durable: the patent process of Mr. F. Ransome is, in my opinion, the best. Upon the subject of "soluble silica" I shall probably have a word or two to say hereafter.

"Philo's" suggestion about coffee and eggs I have known and often applied for some years past. I would merely warn your readers against the sudden addition of boiling water to a concentrated solution of albumine or vitelline (as present in the egg), as coagulation then generally takes place, and the curd thus formed is most unwholesome and indigestible: the addition of a very small pinch of carbonate of soda will prevent coagulation, otherwise the water must not be quite boiling.

I should imagine that iron water-pipes might be cleansed by filling them with brine (or dilute oil of vitriol), and passing up them strips of metallic zinc in contact with their inner surfaces, allowing the whole to remain for a day or two. If the pipes were then flushed, and a small piece of zinc kept attached to them here and there, inside, I think your correspondent would no longer complain of the ferruginous nature of his water. WENTWORTH L. SCOTT.

INSTITUTION OF CIVIL ENGINEERS.

THE evening of the 29th ult. was devoted to the discussion upon Mr. F. M. Kelley's paper, "On the Junction of the Atlantic and Pacific Oceans, and the Practicability of a Ship Canal, without Locks, by the Valley of the Atrato."

It was admitted that a correct description had been given of the routes hitherto proposed, and of the valley in question, but that the route by Panama would be found the most economical and most convenient, if the communication was made between the River Chagres and the Rio Grande, where there were only fifteen or sixteen miles from tide to tide, instead of by Chorrera, as proposed by M. Napoléon Garella.

A letter was read, addressed by Baron Von Humboldt to Mr. Kelley (after examining the maps and plans), expressing great confidence in the survey made and levels taken by Mr. Kennish and his predecessors.

Humboldt expressed an opinion that a free and open discussion would demonstrate the relative advantages and disadvantages of each proposed locality, and there would really be little difficulty in tracing the proper route, wherever there were good plans and sections, such as had been made under Mr. Kelley's directions, of the valley of the Atrato. His opinion in favour of that route, as compared with all the others, had always been strongly expressed; and, in his works, he had even given all the details he had collected, relative to the small canal stated to have been made in the year 1778, by the Indians, under the directions of a monk, the Curé of Novita, in order to unite the waters of the River Raspadura with those of the River San Juan, and thus establish a water communication for canoes across the Isthmus. He alluded also to the labours of Capt. Fitzroy, R.N. who had, in his report on the Isthmus of Central America, descanted on all the known routes; and he recalled the statement of Lieut. Wood, R.N. when surveying the coast, to the effect that he travelled on foot with native guides, from Cupica to the Napipi, in which he bathed, and returned to his ship within six hours, and that the most elevated ground passed over did not exceed 300 or 400 feet. In fact, Humboldt looked upon the proposition of forming an inter-oceanic canal by the valley of the Atrato as perfectly feasible; and he even added, "without locks, or, if possible, without tunnels."

Notices of Books.

WE wait for space to notice as they require a number of books now before us;—Mr. Cresy's "Supplement" to his "Encyclopædia of Civil Engineering" (published by Messrs. Longman), which contains valuable matter; Mr. William Linton's beautiful volume, "The Scenery of Greece and its Islands," illustrated by fifty views (Lodge-place, St. John's-wood); Mr. Ruskin's fourth volume of "Modern Painters" (Smith and Elder); M. Tegoborski's work on "The Productive Forces of Russia" (Longman); and Mr. Wornum's "Characteristics of Styles: an Introduction to the Study of the History of Ornamental Art," published by Chapman and Hall. The same publishers have issued a volume by Mr. Burchett, "Practical Perspective;" the course of lectures delivered in the schools of art in connection with Marlborough House, where Mr. Burchett is head-master of the Training and Normal School. From Messrs. Blackwood we have "The Science of Beauty, as developed in Nature, and applied in Art," by Mr. D. R. Hay, which is a *résumé*, with some original matter, of the author's former works, for those who desire to become acquainted with his theory of beauty in form and colour. Mr. H. R. Twining's second volume on "The Elements of Picturesque Scenery" (Chapman and Hall), is full of thoughtful and suggestive observations for those who will patiently study it. The eighth volume of the "Sussex Archæological Collections, relating to the History and Antiquities of the County," published by J. Russell Smith, for the Sussex Archæological Society, contains several papers of considerable value and interest.—Mr. Ruskin's "Notes on some of the Principal Pictures exhibited in the rooms of the Royal Academy, &c." (Smith and Elder), differ in this from the pamphlet of last year, that whereas then the notices were chiefly adverse, they are now, with the least possible exception, complimentary. In his preface Mr. Ruskin makes some observations respecting the probable difference, in aim, between anonymous and acknowledged criticism; asserts "the dishonesty of criticism in general;" and expresses regret, in which we participate, "that people should be so ready to call every kind of fault-finding 'hostility,' the moment they can bring it home to a known person."

Miscellanea.

OFFICE TABLES IN THE METAL TRADES.—A large sheet adapted for office walls has been published by Mr. William Johnston, of Glasgow, Metal Merchant, containing numerous tabular arrangements on the properties and prices of the metals chiefly used in the arts and manufactures. It is said to be compiled from the most recent and authentic sources, and contains much valuable and useful matter, including a central map of the fluctuations of price in the chief metals during the last sixteen years, and a general table of the physical and chemical properties of all the metals and metalloids, separate tables showing the weights of various forms and sizes of manufactured metals, &c.

MECHANICAL DRAWING AND EDUCATION OF THE HAND.—In a little sixpenny tract under this title, printed at the United National and Free School, Painswick, and sold by Groombridge, the advantage of the cheap French cases of drawing instruments, sold in Paris at from 1 franc 75 cents, or 1s. 6d. up to 20 francs or 16s. for use in primary and other schools as well as schools of art, is urged in form of a letter to the Dean of Hereford, by Mr. W. H. Hyett, F.R.S. There are samples of these cases in the Museum of the Department of Science and Art in Marlborough House. Surely the same sort of instruments could be as cheaply produced in this country, did the mathematical instrument makers know there was a sufficient demand for them. In the tract alluded to, their importation wholesale is recommended. Our home manufacturers should see to this, and by providing a prompt supply prevent the establishment of such a trade to their own prejudice. The tract of Mr. Hyett is worth perusing.

CLARE MARKET.—There is nothing like the "argumentum ad hominem," and I will plainly put it to you, as your house of call is in the locality in question, to ask yourself when you next walk cityward through the confined precincts adjacent to Lincoln's-inn Fields, whether such an ill-conditioned, badly accommodated, offensive, and dirty thoroughfare as that leading through Clare Market, ought to be tolerated; and whether you are not, as a public advocate, bound to protest against it? Late in the evening, especially on market-days, the press of persons there is so great, as not inaptly to remind one of a flight of rooks or starlings, fluttering over a feast fortune has presented to their notice. Surely something may be done to rectify this abuse. Model lodging and washing houses we have got the poorer classes, is there no means of providing appropriate places for marketing? I believe there are some parts of the metropolis where ample provision is made to this end. Perhaps it will be urged, that there would be an interference of vested rights, an immemorial usage perhaps of vending cats' or dogs' meat; one would certainly be averse to give occasion of umbrage to the victuallers of the canine and feline tribes, but no one in his senses will dispute the position that these are very trifling considerations, when placed in competition with what concerns the welfare and dignity of the "human form divine." As one of the public interested, I am content to leave the subject in your hands: perhaps it may have been previously agitated; if not, I hope it will not escape the notice of the *Builder*, and if it should happen that a phalanx of respectable inhabitants of the neighbourhood should, with an eye to amelioration, invade the passages of Clare Market, it is to be hoped they will not find the "pass" another Thermopylæ stoutly defended by "three jolly butchers."—FORUM.

CHELTENHAM SCHOOL OF ART.—The report for the third year has been just presented to the committee and friends of this school, by the hon. treasurer, Mr. W. M. Tartt, J. P. Whilst maintaining its usual amount of teaching at the central school, its operations have been widely extended amongst the colleges and schools of the town; the master, Mr. James Wright, having altogether about 1,100 pupils under instruction, in nine or ten separate institutions. In all an extensive use is made of the black board and class lectures. In the central school the evening students have commenced a small weekly book subscription, in order to form a nucleus of a Fine Art library, and to secure the *Builder* and *Art Journal* being always on the table for their information in Art matters.

THE VICTORIA DOCKS.—Certain modifications are being made in the twenty-one years' lease of the works of the Victoria Dock Company, to Messrs. Peto, Betts, and Brassey, one of which comprises an increase of the sum for expenditure in the construction of works on the additional land east of the docks, from 933,000*l.* to 1,199,000*l.* the entire parliamentary capital, under reservation of 5,000*l.* as a bankers' balance in hands of the directors. Sir M. Peto mentioned at a recent meeting of the company, that the tonnage entering the docks has exceeded 1,000 a-day since the opening.

NEW SCHOOL OF ST. THOMAS, CHARTERHOUSE. The foundation stone of the New School of St. Thomas, Charterhouse, Golden-lane, was laid on 8th inst. by Mr. W. E. Gladstone, M.P. in the absence of the Marquis of Lansdowne, who was to have gone though the ceremony. The existing schools of St. Thomas, Charterhouse, were established for the purpose of educating the children of the costermongers and poor inhabitants of Golden-lane and Whitecross-street. Of the lowest class of children, however, there are still 2,386 who do not attend any school whatever. To meet this deficiency, the present school has been promoted. A freehold site in Golden-lane was procured, and plans prepared by Mr. Hesketh for a building containing three school-rooms, and capable of accommodating 1,000 children. The cost of this building (including purchase-money of site for building and play-ground, 2,200*l.*) is estimated at 8,452*l.* Two-thirds of this, viz. 5,634*l.* 13s. 4d. will be defrayed by the Committee of Council. For the remaining, viz. 2,817*l.* 6s. 8d. the treasurer (the Rev. Mr. Rogers, incumbent of St. Thomas, Charterhouse) appeals to the public.

RATCLIFF, OR REDCLIFF.—We are informed that Mr. Andrews, the engineer, has brought to light some interesting relics of former London, in excavations making at Redcliff for a new dock for the West India Dock Company. Our correspondent says they came to a stratum of red earth, and thinks we may have here the reason of Redcliff being so named. There was also an extensive causeway of wood construction at a spot known as the Danish-causeway. There is a street here called Shakspeare's-walk. The reason may be worth inquiring into. We are told many ancient fragments are found, and, from want of care, are taken possession of by the workmen.

STRIKES IN SCOTLAND.—The masons in Kilmarnock struck work on Saturday before last for 26s. a week. The miners in various parts of Scotland have for some time been on strike, and the struggle still continues, although the men are getting worn out by privation and long endurance. It is computed that for some weeks past 40,000 men have been voluntarily idle, and an amount of wages equalling 320,000*l.* has been lost to them and to the country. The strike is against a reduction of wages.

ACCIDENT WITH A LADDER.—In Clement's-Inn-passage lately, three men were repairing the roof of premises belonging to a butcher, and having all got upon the ladder at once, after performing their work on the roof, while in the act of coming down, the ladder broke, and all were precipitated to the ground, except one, who was caught in the thigh by the butcher's hooks, where he hung till extricated. The other two were also severely, if not fatally injured.

NORWICH FREE LIBRARY.—At the last meeting of the Town Council, the committee reported that the Free Library would be ready for occupation next Michaelmas. The cost of the site was stated to be 1,850*l.*, and of the building, including all expenses, 4,108*l.*, making a total of 5,958*l.* At a previous meeting, statements were made that the contract had been broken by the erection of the additional story. The committee, including several legal gentlemen, are said to be of opinion that it is not broken, there being the usual clause in it for any enlargement or alteration of the original plan. The contractor, says the *Norfolk Chronicle*, has taken a whole year for the erection of another story. Though the money has been advanced for the building, some members of the council will not vote for a halfpenny rate. In the new building, besides three vaults and a large room for the Free Library, there will be large rooms for the Literary Institution, the Museum, the Chamber of Commerce, and the School of Art. A subscription has been opened for the purchase of books, and the secretary has already received a considerable number in the shape of donations.

ACCIDENT AT THE WEST INDIA DOCKS.—During the heavy north-east gale on Tuesday in last week, an accident took place at the West India Docks, by the bursting outwards of the lock gates of the Limehouse entrance of the South West India Dock, or City Canal, by which the whole of the shipping in the dock was placed in peril. The canal runs parallel with the large principal export dock, and within the last year or so, a new dock of gigantic proportions has been constructed at the Blackwall end, which connects the canal with the other extensive basins of the company. The entrance-locks are each fitted with two gates, so as to equalize the pressure of water. At the Limehouse end, however, the outer gate nearest the river was undergoing some repair, and could not be used, so that the whole pressure of water in this section of the dock was against the inner gate. It was constructed of timber 2½ ft. thick, ironed and bolted, and so built and hung as to open inwards. In the course of the evening the wind blowing directly up the canal, had the effect of causing some swell at the Limehouse extremity. The tide in the river was nearly at its lowest ebb, the entrance-lock as far as the inner gate almost dry, and on the other side of the gate in the dock there was a depth of water of some 20 feet. Suddenly the gates, probably weighing 20 tons, were smashed outwards, and swept in fragments into the river, the waters of the canal bursting down into the lock with overwhelming fury. In the torrent were swept away craft of almost every description, but two boats only are said to have been lost, although many were stranded. There were between 70 and 80 merchant ships lying at the various jetties, at each side of the canal. These were carried away from their moorings. The larger ships, however, quickly grounded in the mud. The gates are reported to have been almost the only property injured, and the entrance has been refitted.

CAMBRIDGE ARCHITECTURAL SOCIETY.—At the third meeting of this Society, held on Wednesday, May 7th, the Rev. H. R. Luard read a paper on the Church of S. Apollinare in Classe, at Ravenne. He dwelt particularly on the mosaics which adorn its walls, and gave a sketch of the rise and progress of that art.

A SCOTCH ARCHITECT IN NEW YORK.—A New York paper speaks in high terms of the fine specimens of domestic architecture to be seen in the celebrated street Broadway in that city. It says,—"Wonderful piles of marble, brown stone, and brick have arisen as if by magic, and the indefatigable pioneers of up-town civilization are still building with unabated industry." In Thirty-seventh street, also, it says,—that "a number of houses are going on which bid fair to surpass everything in the neighbourhood." This high praise is chiefly bestowed on Mr D. Jardine, architect, New York, from whose plans the buildings referred to were erected. It gives us pleasure to learn that Mr. Jardine is a native of Whithorn.

POLYTECHNIC INSTITUTION. — The unfavourable weather on Monday had little or no effect on the numbers visiting this establishment. Two new musical performers were introduced. Mademoiselle Mundie on the Cyther or Zitter, an instrument in use in the south of Germany, executed two pleasing pieces, and met with a cordial reception; but the extraordinary performance of Herr Ziros on the musical toy the Hemmilinska, must be heard to be appreciated. Picco's Pastoral Tibia requires the accompaniment of a band, and is a wonderful performance; but Herr Ziros is his own accompanyist, and executes three distinct parts with great facility. The entertainments concluded with an illustration of Bunyan's Pilgrim's Progress, some of the views for which are not so good as they should be. We must not forget to mention an excellent model of the north and south sides of the city and fortifications of Sebastopol, on a scale of 36 inches to a mile, which has been added to the collections here.

MR. WICKES'S "SPIRES AND TOWERS."—A wish has been expressed by some of the subscribers to Mr. Wickes's work, on English Mediæval Spires and Towers, that a supplementary volume should be issued, containing a number of beautiful and interesting illustrations, which want of space necessarily excluded from the two volumes already issued; and the author has decided on preparing such a volume for publication, if sufficient patronage be extended to the undertaking. It would comprise upwards of sixty subjects (the majority of which are referred to, and described in, the essays contained in the work itself), and would be uniform in size and price with the former volumes. As the publication of this supplement would involve considerable time, labour, and expense, and as it would be valuable to those only who possess the preceding portions of the work, the number of copies printed would be limited to the actual number of copies subscribed for, and the author, therefore, is anxious to receive, as speedily as possible, the names of those patrons of the work who desire to be furnished with copies of the supplement. The published volumes were so well done, and form so excellent a work, that we sincerely hope a sufficient number of subscribers will be found to induce Mr. Wickes to carry out this proposition.

THE ARCHITECTURAL MUSEUM.—Two lectures have been delivered here in accordance with the advertised list. We shall as heretofore print the substance of them.

THE BIRMINGHAM RECREATION SOCIETY.—The information sent us on this subject it appears was (doubtless inadvertently) wrong in naming Sunday as the day on which the rooms of the Society are open from 2 p.m. till 10 p.m.: it should have been Saturday not Sunday. The rooms do not appear to be open at all on Sunday.

THE RESERVOIR IN HYDE-PARK. — It has often struck me with surprise, and must, I think, many other frequenters of the parks, that the unsightly reservoir near Grosvenor-gate should still be tolerated. The parks have been greatly improved within these last few years in planting, widening walls, placing seats, &c. I do hope, now that attention has been given to this subject, that this basin will not be overlooked. It is an obstruction to the view and to any improvement of the walks near it, and is, with its hideous fountain, as ugly a thing as can be well conceived. Nothing but the greatest necessity ought to excuse its further remaining.—A PARK STROLLER.

ONSLOW BAPTIST CHAPEL, BROMPTON.—A site having been obtained near Queen's-elms, part of the land belonging to the Hospital for Consumption, the first stone of a chapel for the Baptists was laid on the 6th inst. The edifice will be in the Pointed style of architecture. The extreme length will be 85 feet, breadth 65 feet, height 52 feet, and two towers, each upwards of 90 feet high. The building is to be faced with Kentish rag, relieved with Bath stone dressings.

BARN-FLOORS.—Mr. Greaves, of Matlock Bath, Derbyshire, has favoured the Council of the Royal Agricultural Society with the following information respecting barn-floors, in reference to an inquiry made by Colonel Chapman, "whether any cheaper and equally durable material had been met with, as a substitute for barn-floors, than the old-fashioned oak flooring, for which an estimate had been sent in to him for 40*l.*" :— "In reference to your inquiries relative to the laying of barn-floors, I strongly recommend asphalte in preference to wood, for many reasons, a few of which may be mentioned; as, first, the imperviousness of asphalte to moisture; second, the exclusion it occasions to vermin; and, third, the preservation of the grain in a sweet state from the dryness in which it is kept. I get the asphalte in blocks, and having set up an old boiler near the place, I mix gravel with it while hot, and run out the mixture on the surface required to the thickness of about 2 inches. In a few hours the asphalte floor will bear any weight, and it will be found not only better but cheaper than wood."

DOVER WATER WORKS.—Strong statements have reached us as to the manner in which the water pipes have been laid at Dover, and the consequent waste of water. It seems too serious a case, however, to meddle with on *ex parte* evidence.

TENDERS

For warehouse in Bury-street, St. Mary Axe. Mr. T. C. Clarke, architect. Quantities supplied by Mr. Barrett:—

I'Anson	£2,376	0	0
W. Lawrence and Sons	2,180	0	0
Browne and Co.	2,147	0	0
Ashby and Sons	2,108	0	0
Wilson	2,091	0	0
Westacott	2,078	0	0
Pollock & MacLennan (accepted)	2,076	0	0

For vicarage-house, Gazeley, Suffolk. Mr. William Rogers, architect:—

Clarke (Newmarket)	£1,856	0	0
Grainger (Saffron Walden)	1,848	0	0
Gammon (London)	1,757	0	0
Freeman (Ely)	1,748	0	0
Rednall (Woolpit)	1,745	0	0
Bullock (Cambridge)	1,692	0	0
Taylor and Buckley (London) (accepted)	1,670	0	0

For two chapels, including inside fittings, &c.; two lodges, two sets of entrance-gates, dwarf wall, and iron railing, at Mansfield Cemetery. Messrs. Pritchett and Sons, architects:—

Valance	£1,850	0	0
Prisby	1,710	0	0
Lindley	1,488	0	0
Deunett (accepted)	1,467	0	0

For the erection of a cottage residence, for Mr. R. W. Boyle, Stratford, Essex. Mr. Horace A. Alexander, architect. Quantities supplied –

Perry	£1,224	0	0
Hill	1,217	0	0
Hedges	1,195	0	0
Pilkington	1,127	0	0
Morter	1,097	0	0
Rivett (accepted)	1,023	0	0

For Chorley Cemetery:—

	Saville.	Banks.	Todd.	Chester.
	£. s. d	£. s. d.	£. s.	£. d.
Entrance-Lodge..	447 7 9	384 6 11	473 9	397 0
Episcopal Chapel	345 14 11	306 14 6	412 0	316 0
Roman Catholic Chapel	342 4 4	247 1 2	373 12	265 0
Dissenters' ditto..	311 17 1	255 0 5	315 4	270 0
Totals	1447 4 1	1193 3 0	1574 5	1248 0

Mr. Banks's tender for the three chapels, accepted. The Commissioners are wishful to reduce the cost of the entrance-lodge, and, intending to alter the plan, did not let this building. The Episcopal and Roman Catholic Chapels are, each 32 feet by 18 feet on plan, inside measure; with vestries, 10 feet by 10 feet, and bell turrets. The Dissenters' Chapel is octagon on plan, 24 feet, inside measure.

For three chapels and lodge, at Salford Cemetery. Messrs. Pritchett and Sons, architects:—

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s. per foot super laid together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 3, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

PORTLAND CEMENT.
CHARLES NELSON, having completed his works for the manufacture of the above Cement, can supply Contractors, Builders, &c. with a very superior article. The manufacturing department being under his own immediate superintendence, he can confidently recommend it for all works in which Portland Cement is used, and only requires a trial to insure approbation.
Orders, addressed to
London Depôt, 16, South Wharf, Paddington,
BLYTH, BROTHERS, Sole Agents,
will meet with immediate attention
Manufactory—Ensecote Mills, Warwick.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

PORTLAND and BATH CEMENTS.
TATHAM and CO
14, South Wharf, Paddington.

SOUTHAM BLUE LIAS LIME DEPOT.
Glazed Stoneware Sewage Pipes.
Brick, Lime, and Cement Merchants,
TATHAM and CO.
14, South Wharf, Paddington.

PORTLAND and ROMAN CEMENT.
PLASTER of PARIS
Manufactured by J. M. BLASHFIELD, at Millwall, Isle of Dogs.
Warehouse, No. 1, Wharf, Paddington-basin.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.
These cements set under water in a few minutes, and are not affected by extreme heat or cold.
FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. — Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Manx Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Tyndustones, Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Portzolano.

11, George-yard, Lombard-street, City

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the Isle of Sheppey. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise Apply to G. BOOTH, Agent, as above.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS Millbank street, Westminster; and Seel-street, Liverpool.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling cornices, decorations, &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME (lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 80, old Broad-street, London; to Mr. M'NUMENT, 4, Caroline place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

PORTLAND and ROMAN CEMENTS.—T. H. BOORMAN, WILD, and CO. MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester Agent at the Works—Mr. THOMAS WEEKES.

FREEN and CO.'S PORTLAND CEMENT and LIME WORKS, WOULDHAM, near Rochester.—These Works having obtained Letters Patent for the Manufacture of Cement, by which very great and important advantages are obtained over the old method of manufacture, insuring at once uniformity of colour and quality, Merchants, Contractors, and Builders are informed that they can now be supplied with any quantity, either for home or foreign markets, for wholesale orders, on advantageous terms and prices forwarded, on application at the Works; or to Mr. W. C. ATKINSON, 62, Moorgate street, City; from whom also testimonials from eminent engineers as to quality may be obtained.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Birmingham and Oxford line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway.—Greaves's Blue Lias Lime, Portland, Bath, and Lias Cement.—Works, at Harbury, Stockton, and Wilmcote.—Office, at Warwick.

HUBBUCK'S WHITE BODY PAINT of superior body to the Best White Lead, whilst it is as smooth and permanent as Zinc Paint. One coat laid on as directed is equal to two coats of White Lead; whilst the consumption of material is less than for one coat. It dries very fast and hard.
HUBBUCK'S QUICK-DRYING BODY PAINT the same as the former, at three-fourths the price.
HUBBUCK'S PATENT WHITE ZINC PAINT is invaluable for Iron Ships and Iron Houses, not liable to salt water; neither blize water, nor noxious vapours from cargo, nor heat on funnels of Steam Vessels act upon it. Sold by the Wholesale Paint Dealers, in original packages stamped, Hubbuck, London, Lower Penart; and when so marked the quality is guaranteed.
HUBBUCK'S COPPER COLOUR ENAMEL PAINT prepared expressly for the bottoms of Iron and Wood Steam Ships, a protection from rust and incrustation. Timber coated with this Enamel is not attacked by the worm neither do barnacles attach to it.
Full particulars of THOMAS HUBBUCK and SON, Paint and Varnish Works, opposite the London Docks, London.
OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT

GREAVES'S BLUE LIAS LIME.—The above Lime supplied direct from the works to wharfs alongside the rivers or canals, railway stations, or vessels in the docks. A large supply always in stock.—CHARLES RICHARDSON, Brick, Lime, and Cement Merchant, 3 and 6, South Wharf, Paddington

NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME.
WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into boats, at the Works. Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

BLUE LIAS LIME.—CHARLES NELSON begs to inform Engineers, Architects, Contractors, Builders, and the Trade in general, that he is prepared to supply direct from the Works in his own boats to any part of the Thames, River Lee, on any canal or by rail to all parts of the kingdom, large quantities of the above GLENDIE HYDRAULIC LIME now so extensively used.
Quality, Weight, and Measure may at all times be strictly relied on, references in proof of the above can be given.
N.B. The Captain of the Boat will always bring with him the Grand Junction Canal Note, from which the contractor will be enabled to know exactly what weight of Lime he is paying for.
All orders addressed to the
LONDON DEPOT, 16, SOUTH WHARF, PADDINGTON.
BLYTH, BROTHERS, SOLE AGENTS.
Will be promptly attended to, and any further information can be obtained from them
Works, Stoke mum-field, near Southam, Warwickshire.

PLASTER of PARIS.—MESSRS. BLYTH, BROTHERS, beg to acquaint the trade, that they have made a considerable reduction in price; the quality they are now manufacturing cannot fail to give entire satisfaction. Samples and prices forwarded to any part of England, or the metropolis. No extra charge made to any wharf or railway station in London.—Any further information can be obtained at their Works, Baldwin's-place, Gray's inn-lane, Holborn; or at the Blue Lias Lime Depôt, 16, South Wharf, Paddington.

GREY STONE LIME WHARFS,
12, UPPER GROUND-STREET, Blackfriars (Surrey side).
7, NORTH WHARF-ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or from where direct from the kilns.
Large Grey Stone, or Grey Chalk, free on board at Works, 8d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brick fields, which are only a quarter of an hour's walk from the City. H. D earnestly requests purchasers to favour him with a visit, in order to inspect his stock and judge for themselves.
Malm Place half-washed Stocks, and Place Bricks, also on sale. The e bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing
Apply to HENRY DODD and CO. at the Counting-house, Hatton Brick fields, Grange-walk, near the Mesonary Branch, Hoxton.
N.B. Light-colored Pit Sand of a good quality constantly on sale upon reasonable terms. This Sand, from its containing any saline matter, is acknowledged to be preferable to river sand

500,000 STOCKS.—Wanted, to Purchase about half a million or more of Stocks, delivered alongside in the creek at Stamford or Stanley Bridges, Fulham and Kensington Basin. The Stocks must be good sound grey Stocks. Cash on the delivery of each barge.—Apply to A. B. Mr. Tulls, Rising Sun, Fulham.

BRICKS and TILES FOR SALE.—500,000 Good Old Bricks, 20,000 Pan and Plain Tiles, Stone Steps, Curb and other Materials FOR SALE Cheap, on the Premises now pulling down for Improvements, adjoining the Great Northern Railway Terminus, King's-cross.—Inquire for WM. LAWFORD on the Prem ses.

CHEAP WHITE BRICKS, for FACING HOUSES (Beard's Patent).—These bricks are of excellent make and colour, and imperishable from frost, and do not vegetate or become green.—For particulars, address, Patent Brick Works, Rugby, Warwick-shire.

HODSON'S PATENT BRICK-MAKING MACHINE may be seen in operation daily, on application to Mr. B. LOOKER, jun. Agent, North-ton Pottery, and Brick and Tile Works, Kingston-hill, Kingston-on-Thames. This machine is confidently offered to the public as the most perfect and simple one that has yet been introduced Price £57

THE PATENT BRICK MACHINE COMPANY invite orders for their IMPROVED MACHINES. One of them is working in a field at Caterham, near Croydon, and arrangements are made with the owner for bearers of a letter from the Secretary, to see it in operation every Thursday and Friday.
HENRY C. MOUNT, Sec
37, King William Street, City.

IMPORTANT to BUILDERS.—GREAT REDUCTION in the PRICE of BRICKS.—BRICKS delivered to any part of the River up to Battersea-bridge, at the following prices, viz.—Grey Stocks, 28s. per thousand; Grizzles, 20s. per thousand; Rough Stocks, 25s.; Place, 12s. to 15s. per thousand.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES.
For Spouting Roofs of Houses either old or new, whether of thatch, slate, tile, or felt, and other structures.
SOLE AGENT,
J. B. LAWES, 1, Adelaide-place, London-bridge.
This is the cheapest and most durable Roofing known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.
Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent at 5d. per foot. This charge to include tiles delivered in Agents yard, cement, and labour. May be had in London, Gloster, Bridgwater, and Reading.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the above WARES is REMOVED to No. 21, WHARF, Mac leslield-street North, Oxford Masin. Secondly, that the trade terms, "Terro-Metallic," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 281, of the Great Exhibition, rank the Manufactories known so long as "The Peakes." Tunstall, Staffordshire, as the first of the kind in the world.

HOGG'S REGISTERED GARDEN EDGE TILES.—The attention of PERSONS ENGAGED in LAYING OUT GARDENS and WALKS for Public Institutions, is solicited to these Tiles, as an improvement on box-edging. In colour they resemble Bath stone, they are impervious to frost, serve to drain the paths, are easily laid down, and last for years without further expense. Price 13s. per 100, or about 4½d. per yard run.—Full particulars will be sent on application to R. BLACKETT, Witham, Essex, of whom alone the tiles can be obtained
N.B. White and Brimstone Suffolk Bricks, and Paving Goods of the best quality

TO STONEWARE POTTERS, BRICKMAKERS, CONTRACTORS, and OTHERS.—A POTTERY and BRICK WORKS TO BE DISPOSED OF, on easy terms, near a railway station, and within reach of the large Government works now in progress at Winchester, Hamble, &c. &c. The machinery, buildings, and plant are upon the most improved plan, and adapted for carrying on a large stoneware business, for which the clay is well suited. There is ample space and every requisite for making from four to five million bricks per annum, large sheds for making tiles and red ware; a dwelling-house, stable, &c. &c. The whole in complete order, and now in operation.—For part culars, apply to Mr. F. SCHULTZ, Solicitor, 4, Dyer's-buildings, Holborn, London.

TO BRICKLAYERS and OTHERS.—TO BE DISPOSED OF, in consequence of the death of the principal, an old-established BUSINESS, situated a short distance from the Crystal Palace, Sydenham, together with the lease of a substantially built private dwelling-house, built at a very low rent. For further particulars, apply to Mr. SIDE, 69, Union-street, Borough, South wark, London

KENT'S PAINTING-BRUSHES are of the very best quality, and may be obtained at all the first houses in the trade, having registered my manufactures, G. B. KENT and CO. 11, Great Marlborough-street, London-W. Established 1777.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

PARSEY'S REVOLVING STEAM-ENGINES and PUMPS (the accomplishment of circular motion).—As steam-engines, are better than all others; and as pumps, being all metal, are equally good for hot or cold liquors; and having no packing, are not liable to choke, and are a vast improvement on pumping and for ships' pumps.—To be seen at Mr PARSEY'S Depôt, Great Scotland-yard.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

PATENT TERRA-COTTA. Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crosses, Label Mouldings, Friezes, Trusses, Vases, Balusters, Capitals and Bases of Columns, Paving, Facing Bricks, Coping, Kitchen and other Sinks, Chimney Shafts and Tops, and numerous other Articles, manufactured by J. M. BLASHFIELD, in Patent imperishable Terra-Cotta, at Mill-wall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington basin.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely fluxurious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration take place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; and by the Manufacturing and Painting Agent, Mr. FREDK. BIRBY, Pitsroy Works, New-road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS in kegs of 1 cwt. and casks of 2 cwt. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

PULLEN and SON will SELL by AUCTION, on the PREMISES, on TUESDAY, MAY 27, at TWELVE, by order of the Improvement Committee of the Corporation of the City of London, the BUILDING MATERIALS of Fifteen of Special Houses in Pierrepont and Turnmill-street, Clerkenwell, of the usual description of materials, and a large quantity of surplus materials and stores, consisting of about 10,000 feet run of inch boards, 2,000 feet run die square, 50 ledged gates, shoring timber and useful fir-wood, 10 tons of cast iron, to be viewed the day prior and Catalogues had at the Architect's Office, Guildhall; and of Pullen and Son, 80, Fore-street, Cripplegate

TOWER-HILL. Building Materials of 20 Houses

PULLEN and SON are directed to SELL by AUCTION, on the PREMISES, on MONDAY, MAY 26, at TWELVE, in lots, all the valuable BUILDING MATERIALS of 20 HOUSES, in Petty-wales and Seven Stars-yard, Royal Mint-street, near Tower-hill, comprising about 300,000 good sound BRICKS, YORK and FIR TIMBER, in roofs and floors, glazed sashes, useful doors, partitions, flooring boards, paving pantiles, York and clinker paving, gutters and pipes, weather boarding, gates and fencing, stone coping and sills, stoves, and useful fixtures and fittings. May be viewed on Saturday and morning of sale, and catalogues had of Pullen and Son, 80 Fore-street, Cripplegate.

The Valuable and Important Freehold Manor of Newington, Barrow, otherwise Highbury, in the Parish of St. Mary, Islington, in the County of Middlesex.

MESSRS. DENT and SON have received instructions to offer for SALE by AUCTION, at GARRAWAY'S COFFEE-HOUSE, Change-alley, Cornhill, on WEDNESDAY, the 18th of JUNE next, at TWELVE for ONE precisely, the valuable and improving MANOR, hereditable parcel of the possessions of the Crown, with all the customary advantages, arising from courts baron, and leet, court of survey, and the other rights of the lord, on death or alienation, quit rents, royalties, and all rights, members, profits, emoluments, and appurtenances thereto belonging. By a survey made by order of Henry Prince of Wales (the eldest son of King James I.) in 1611, the Manor was found to contain near 1,000 acres, of which 113a. 3r. 0p. were freehold, 467a. 0r. 6p. demesne land, and 414a. 3r. 14p. were copyhold of inheritance. By the custom of the Manor, two years' improved rent is payable to the lord on death or alienation. The quit rents presently at this time amount to 4l. 2s. 4d. per annum, extending over very valuable property, estimated at upwards of 1,300l. per annum, exclusive of the copyhold tenements. The emoluments to be expected to arise from lands and appurtenances, from which the quit rents and customary fines and payments have been omitted to be reserved, are an object of considerable value; and the whole forms an important investment in every respect worthy the attention of gentlemen of the legal profession or the capitalist. Particulars and conditions of sale with a plan of the Manor, are in progress, and will shortly be ready at the Place of Sale; the Angel Tavern and the Blue Coat Boy at Islington; the Gate House, Highgate; the Upper Holloway's and the Green Dragon, Hornsey; the Plough, Hornsey-road; at the Offices of R. W. Powys, Esq. Solicitor, 33, Russell-square; and of Messrs. Dent and Son, 26, Southampton Buildings, Chancery-lane, and Camden Town.

TO BUILDERS.

MR. GEORGE BERRY will SELL by AUCTION, at the COMMERCIAL-HALL, King's-road, Chelsea, on THURSDAY, MAY 22, at ONE for TWO o'clock precisely, by direction of the assignees of Messrs. Thomas Archbold, bankrupt, the INTEREST in a certain BUILDING AGREEMENT for the LEASE of No. 1, Pelham-square, Chelsea, the sewer to which has been wholly and the road partly completed, together with a Carcase and Foundations of two Houses. May be viewed, and particulars had of the Auctioneer, at the Commercial-hall; of P. Johnson, Esq. Official Assignee, 30, Basinghall-street; of James May, Esq. 3 Princes-street, Spitalfields; and of the Auctioneer, 8a, Motcomb-street, Belgrave-square

LAND.—WANTED, about SIX ACRES of LAND, of Freehold Tenure. It must be within four miles of London; a road-frontage not material.—Price, and other particulars, to be sent to Mr. J. Pontifex, 5, St. Andrew's-court, Holborn.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Brothers) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN at the Office in Hunter-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, May 17, 1856.

COMPETITIONS.

TO ARCHITECTS, LANDSCAPE GARDENERS, &c
CHESTERFIELD BURIAL BOARD.—The Chesterfield Burial Board is desirous of receiving DESIGNS, comprising Plans, Elevations, and Sections for the ERECTION of LODGE, with Board room, Entrance gates, Lodge-house, and two Cemetery-chapels, the chapels to be under one roof, to be ornamented with ENAMELLING for the execution of the whole, including inclosing the ground with iron rails and Fences, Chapel-fittings, &c. The outlay not to exceed £2,000. Premiums of £15 and £5 are offered for the two Designs which the Board may consider as being respectively first and second in merit and suitability for the purpose and situation. Plans and drawings are also required for levelling, laying out, Planting and forming Paths and Roadways through the ground, to be likewise accompanied by Estimates fully carrying out and completing the Same, including Plans under the said path and roadways laid down for laying out the grounds. The architect or other person whose plans may be selected, must, if required by the Board, build a border or contractor who will carry out the designs according to estimate. The Board, however, reserve the right of award in any premium, should no Design be accepted for the entire object, accompanied by sealed envelope containing proper name and address, to be sent in, on or before the 23rd day of JUNE next, addressed to the Clerk, from whom a plan of the ground, showing the exact house, intended position of the chapels, &c. may be had on application, enclosing 2s. 6d. in postage stamps.—By order,
ROBERT WALLIS, Clerk.
Chesterfield, 19th May, 1856

EXHIBITION of the ART TREASURES of the UNITED KINGDOM in 1857. The Executive Committee will be happy to receive plans and suggestions as to the best form and mode of CONSTRUCTION of a BUILDING suited for the purposes of the contemplated exhibition. The space intended to be covered is about 15 acres square. The design must also admit of being erected within a period of not more than six months. The Committee do not offer a premium for any suggestion which may be furnished to them, but reserve to themselves the right to award a remunerative consideration if they think fit. The communications must be forwarded, addressed to the Chairman of the Executive Committee, Town Hall, Manchester, not later than the 4th of JUNE next. Every separate plan or paper must bear the signature of the owner. Plans not so marked will not be returned.

CONTRACTS.

NOTICE to CONTRACTORS.—The Commanding Royal Engineer, Portsmouth, hereby gives Notice, that SEALED TENDERS will be received at the Office of the Director General of Contracts, War Department, Pall-mall, London, on or before the 31st inst from persons desirous of entering into a CONTRACT for CONSTRUCTING a CAST-IRON BRIDGE of Communication from the Curtain to the Right Ravelin, and for RENEWING FIVE BRIDGES over the Counter, Portsea Fortifications, Portsmouth. The Plans and Specification may be seen, and all necessary information obtained at this Office between the hours of TEN and FOUR each day (Sundays excepted) until the 30th inst. The Person whose Tender may be accepted will be required to provide two eligible securities, to be bound with him, jointly and separately, in a bond of £900, for the due performance of the Contract by the 1st October, 1856. The War Department reserve the right of rejecting the whole or any of the Tenders. No notice will be taken of any Tender unless upon the printed form, which form may be obtained on application at this Office.
Royal Engineer Office, Portsmouth, 8th May, 1856.
